

PLAYIQ ACADEMY

ORION PORTFOLIO PACKAGE SETUP GUIDE

Implementation guide for creating school partnerships decks & one-pagers.

PREPARED FOR: Jer-ric Martinez

DATE: June 22, 2026

VERSION: 1.0.0

GUIDE: ORION & PLAYIQ PORTFOLIO PACKAGE SETUP

Prepared For: Jer-ric Martinez

Target Audience: School Principals, Curriculum Directors, and Lead Educators

Objective: Provide Sihara with a highly polished, visual leave-behind packet and mini pitch deck explaining PlayIQ and its guided AI, Orion, specifically designed to secure school pilots.

TABLE OF CONTENTS

1. Core Positioning Strategy
 2. Structure of the Deliverables
 3. Context-Rich Slide & Section Copy Templates
 4. Parent Dashboard Visual Mapping (Real Assets)
 5. Step-by-Step Setup Actions for Jer-ric
-

CORE POSITIONING STRATEGY

When Sihara meets with school principals, they will focus on **one central theme**:

> **"Orion teaches students how to use AI as a tutor, not a cheat code."**

Schools are currently fighting a losing battle against copy-paste cheating using public LLMs like ChatGPT. PlayIQ and Orion solve this by integrating AI literacy into the curriculum and restricting the AI to act strictly as a Socratic coach.

STRUCTURE OF THE DELIVERABLES

Jer-ric, please set up two assets in Figma/Canva using these exact structures:

1. **The Mini Pitch Deck (PDF - 16:9 Landscape):** A 6-slide presentation Sihara can show on an iPad or email as a follow-up.

2. **The Leave-Behind One-Pager (PDF - Portrait):** A double-sided physical handout summarizing the core capabilities and the pilot offer.

CONTEXT-RICH SLIDE & SECTION COPY TEMPLATES

SLIDE 1: COVER & VISION

- **Header:** PlayIQ + Orion: Guided AI Tutors for Classroom Learning
- **Sub-header:** Empowering students to build AI literacy, think critically, and master curriculum concepts safely.
- **Visual Suggestion:** A high-fidelity mockup showing a student dashboard on a laptop with the floating Orion chat interface showing a socratic dialogue.

SLIDE 2: THE CLASSROOM AI CRISIS (THE PROBLEM)

- **Header:** The "Shortcut" Loop in Modern Education
- **Content points:**
- **The Copier Crutch:** Students use public ChatGPT to generate whole essays ("Write this for me") or solve math problems ("Solve this worksheet"). They get the grades, but bypass the thinking.
- **The Black Box:** Teachers cannot see how students interact with AI, leaving them in the dark about actual student comprehension.
- **Zero Safety Boundaries:** Generic AI lacks safety guardrails, exposing students to unverified info or adult topics.

SLIDE 3: THE SOLUTION — MEET ORION

- **Header:** Orion: The Course-Aware Socratic AI Coach
- **Content points:**
- **Natively Aligned to PlayIQ:** Orion isn't a search engine. It knows the exact lesson, big idea, and node the student is on.
- **Socratic Hint Ladders:** If a student asks "What's the answer?", Orion responds: *"I can't give you the answer directly, but let's break down the first step. What do you think happens when we...?"*
- **6 Dedicated Learning Modes:**

1. *Explain Mode:* Breaks down hard topics simply.
2. *Hint Mode:* Gives clues (not answers) to keep the student thinking.
3. *Quiz Mode:* Tests memory before checks.
4. *Coach Mode:* Helps organize study time and stay on track.
5. *Learn Your Way Mode:* Adapts explanations to how their brain works.

6. *Lesson Rescue Mode*: Identifies exactly where they got lost in a paragraph.

SLIDE 4: CHATGPT VS. ORION COMPARATIVE MATRIX

- **Header:** Why Orion Belongs in Schools (Unlike ChatGPT)
- **Visual Table:**

FEATURE / SCENARIO	GENERIC CHATGPT	ORION (PLAYIQ)
Prompt: "Write this for me"	Generates text (Enables cheating)	Refuses: Guides student to write it step-by-step
Curriculum Awareness	None (Guesses from web training)	Tailored to PlayIQ Modules 1–11 contents
Socratic Hinting	Gives immediate answers	Climbs a "hint ladder" to stimulate critical thinking
Parent & Teacher Visibility	Completely private/hidden	Detailed progress tracking and mastery analytics
Privacy & Safety	Public training opt-in	Enforces strict school/student data boundaries

SLIDE 5: THE PARENT & STUDENT VALUE PROPOSITION

- **Header:** Empowering Students, Reassuring Parents
- **Student Value:** A personal, non-judgmental 1-on-1 coach that adapts to their speed, helping them get unstuck without feeling lost.
- **Parent Value:** Full transparency into progress (mastery, node pipelines) while protecting child privacy.
- **Visual Direction:** Showcase the Parent Portal dashboard with circular indicators (see Section 4).

SLIDE 6: THE PLAYIQ FREE PILOT OFFER (THE ASK)

- **Header:** Partner with PlayIQ: A Free Pilot for Your School
- **The Details:**
 - **Scope:** Modules 1–3 (AI Learning Code, Digital Smarts, and Pre-Learn System).
 - **Audience:** 10–20 students (e.g., one middle or high school class/cohort).
 - **Cost:** \$0 (Completely free beta access).
 - **What We Provide:** Student licenses, Parent Portal access, and onboarding templates.
 - **What We Ask:** Feedback from your educators to validate and refine our launch.
 - **Call to Action:** *"Let's schedule a 10-minute setup call to select your pilot cohort."*

PARENT DASHBOARD VISUAL MAPPING (REAL ASSETS)

Jer-ric: To make this package look authentic and premium, **do not use generic screenshots or template graphics**. Use screenshots of the actual parent dashboard components we recently implemented:

1. The Visual Gauges Row:

- Capture the four circular radial gauges:
- **Overall Progress** (Large blue/green gauge showing percentage completed).
- **Nodes Mastered** (Purple circular gauge showing mastered count, e.g., 4/11).
- **Modules Completed** (Green gauge showing modules done, e.g., 3/10).
- **Proofs Approved** (Yellow gauge showing approved capstone projects).

2. The Horizontal Node Path Pipeline:

- Show the step-by-step pipeline mapping nodes (e.g., N1 , N2 , N3) with clear Done vs. Pending labels. This demonstrates to administrators how micro-milestones are recorded.

3. Module Telemetry Chart:

- Capture the vertical bar chart representing student progress across each module. It proves that teachers and parents can visualize where students are getting stuck.

STEP-BY-STEP SETUP ACTIONS FOR JER-RIC

☐ Step 1: Capture Real System UI Mockups

- Open the parent portal (/parent/digest or /parent/home) with active test data.
- Take clean, high-resolution screenshots of the radial progress rings and the SVG telemetry bar chart.
- Place these screenshots inside a clean, modern laptop or tablet frame vector.

☐ Step 2: Initialize Figma/Canva Template

- Set up a landscape canvas for the pitch deck and a vertical letter-size canvas for the one-pager.
- Apply the PlayIQ styling system: deep space backgrounds, subtle borders, and neon/vibrant highlights (violet, indigo, emerald).

☐ Step 3: Insert Context-Rich Copy

- Copy-paste the templates from Section 3. Do not shorten the ChatGPT vs. Orion examples, as they highlight our pedagogical advantage.

☐ Step 4: Compile and Export to PDF

- Save the final deck as playiq-orion-pitch-deck.pdf .
- Save the one-pager as playiq-orion-one-pager.pdf .

☐ **Step 5: Run PDF Validation**

- Verify that text is searchable and images render clearly without pixelation.

☐ **Step 6: Hand Off to Sihara**

- Upload both PDFs to the shared workspace and send Sihara the links.
