2. Change Summary

Section	Detail
Previous Problem	Previous draft was an unanchored text outline that lacked active experiments and did not connect rescue settings back to the student's profile, leading to low retention of the gap-diagnosis methodology.
Nodes Fully Restored	Node 1: Confusion as a diagnostic signal (Stop, Name, Choose, Prove). Node 2: The 6 Gap Types (Word, Background, Step, Connection, Transfer, Confidence). Node 3: Chunking & locating the inflection point of confusion. Node 4: Active Teach-Back and verification loop.
New Interactive Labs	Learn How You Learn Lab: 3-way active rescue comparison testing Analogy Rescue vs. Step-by-Step Rescue vs. Socratic Question Rescue on a real sticking point.
Tutor Rule Staged	Rule 4 (`rescue-diagnostic`): Staged in Learning Supercharger Blueprint, directing the tutor how to respond when a student says "I'm stuck" or "I don't get this."
Knowledge File Updated	Structured YAML record appended to `student_profile.yaml` under `Learning Challenges`.
Proof Artifact	`Lesson Rescue Mission Card` capturing the gap type, tested rescue method, and verified solution.
Mastery Check Challenge	The Fog Buster Boss Battle: Taking a real, notoriously confusing homework problem, identifying the exact gap type, and executing an AI-assisted rescue without copying answers.
