

PlayIQ Module 9: Build Your Personal AI Tutor Project

Your mission: turn everything you discovered into a tutor that learns how to help you

Imagine opening one AI Project that already knows:

- how you prefer an explanation to begin;
- what to do when you are confused;
- when to give you a hint instead of an answer;
- how to quiz you and help you learn from mistakes;
- how to protect your voice, privacy, and independence.

You are ready to build that Project.

You will build it yourself inside a parent-approved frontier AI account. Orion

will help you compile the instructions and knowledge files, but Orion will not

ask for your password, enter the account for you, or upload anything silently.

****By the end of this module, I can build, test, and improve a personal AI tutor**

Project from evidence I collected throughout PlayIQ.**

Your completed build will include:

1. a new personal tutor Project;
2. a Project Instruction Set;
3. a Student Tutor Profile Knowledge File;
4. a Learning Rules Knowledge File;
5. a Tutor Test and Revision Log;
6. a Student Setup Checklist.

Part 0: The 30-second tutor test

Read these two tutor responses.

Student: "I do not understand how photosynthesis works."

Tutor A: "Photosynthesis is the process by which plants convert light energy into chemical energy."

Tutor B: "Let us find the missing piece first. Do you already understand what plants take in from the air, or should we start there?"

Circle the response you would rather receive: **A / B**

Why did you choose it?

There is no trick. Tutor A gives information. Tutor B begins by finding the help you need. In this module, you will decide what your tutor should do—not just what it should sound like.

ORION: "A costume can make an AI entertaining. Instructions make it useful.

Today, you are not wishing for a tutor. You are engineering one."

Part 1: What makes a personal tutor Project different?

A normal chat starts with whatever you type in that moment. A Project can hold instructions and approved files that give the AI useful context across your work inside that Project.

Platform names and controls can change. Your parent should help you locate the feature called **Project**, **workspace**, **custom assistant**, or the closest approved equivalent. If the approved account does not offer Projects, complete the files and tests in a regular private conversation. Do not create a new account or purchase anything without your parent.

The three layers of your tutor

Layer 1 — Personality

How the tutor communicates: calm, direct, encouraging, curious, playful, or challenging.

Layer 2 — Function

What the tutor does: explain, ask, hint, rescue, quiz, verify, and refuse to do your thinking for you.

Layer 3 — Knowledge

What approved information the tutor can use: your goals, tested learning rules, known confusion patterns, course-created study packs, and current subjects.

Personality affects how the experience feels. Function affects whether the tutor actually helps you learn. Knowledge gives the tutor relevant context.

You need all three, but function and safety come first.

Why this activity matters

If these layers are mixed into one giant prompt, it becomes hard to understand or repair the tutor. Separating them lets you answer three useful questions:

- Is the tone wrong?
 - Is the teaching behavior wrong?
 - Is the tutor missing information?
-

Part 2: Parent-approved Project checkpoint

Complete this checkpoint with your parent or guardian before creating the Project.

- ☐ We are using the AI account and platform my parent approved.
- ☐ My parent showed me how to create a private Project or approved workspace.

- ☐ We reviewed history, sharing, attachment, and privacy settings.
- ☐ We agree not to upload passwords, payment information, home addresses, private family messages, or another person's information.
- ☐ We know that Orion prepares files, but I paste or upload them myself.
- ☐ We know how to remove a file or delete the Project if needed.

Approved platform: _____

Name of the Project feature on this platform: _____

Parent/guardian initials: _____ Date: _____

If any box is unfinished, prepare the files now and pause account setup until your parent can help.

Part 3: Gather your course evidence

Your tutor should be based on evidence, not flattering guesses. Gather the approved results from Modules 0–8.

Evidence inventory

Source	What to find	Found?	Safe to include?
Module 0	Learning Blueprint, Rescue Target, Advance Target, first rule	☐	☐
Module 1	prompt/question rule	☐	☐
Module 2	responsibility and verification rule	☐	☐
Module 3	pre-learning rule	☐	☐
Module 4	confusion-rescue rule	☐	☐
Module 5	compression rule	☐	☐
Module 6	quiz and Mistake Bank rule	☐	☐
Module 7	Study Pack and file-use rule	☐	☐
Module 8	writing-coach and voice-protection rule	☐	☐

Do not copy every worksheet into the Project. Select only what helps the tutor teach you. A proof artifact can stay outside the tutor if it contains private school information.

Provenance: the receipt for every rule

Provenance means where information came from and how you know it.

Each tutor rule needs:

- `source\_module` — where you discovered it;
- `evidence\_type` — how it was observed;
- `evidence\_summary` — what happened;
- `status` — how certain you are;

- `review\_condition` — when to test it again.

Use one of these evidence labels:

- `student\_reported`: I said this preference describes me.
- `observed`: Orion or I noticed this during an activity.
- `experiment\_result`: a comparison gave evidence for it.
- `pending\_validation`: it might help, but I have not tested it enough.

Example evidence record

```
```yaml
```

- rule\_id: explanation-start

tutor\_setting: Begin a difficult topic with one concrete example.

source\_module: 0

evidence\_type: experiment\_result

evidence\_summary: The example-first explanation felt clearer than the first abstract explanation.

status: testable\_current\_setting

review\_condition: Retest when the subject or difficulty changes.

```
```
```

Notice that the record does not say, "I am permanently an example learner."

It says, "This setting helped under these conditions, so test it again."

Part 4: Discovery conversation — design the experience

Answer these before Orion compiles your files.

1. When you are confused, what should your tutor do before explaining?

2. How many hints should it offer before showing a worked example?

3. What tone helps you stay focused without making you feel judged?

4. How should the tutor check whether you understood instead of asking only,

"Do you understand?"

5. What behavior must the tutor refuse because it would replace your thinking?

6. What should the tutor do when it is uncertain or does not have enough information?

ORION: "These answers are design choices. We will test them. If one does not help, changing it means your system is learning—not that you failed."

Part 5: Active comparison — personality first vs. function first

Why this experiment matters

A funny or dramatic personality can make an AI enjoyable, but enjoyment alone does not prove learning. This test separates style from teaching behavior. Choose one short school concept you understand only partly.

Concept: _____

What I already understand: _____

What still confuses me: _____

Test A — personality first

Use a temporary conversation. Enter:

> Explain [CONCEPT] like an energetic space captain. Make it exciting.

After reading the response, answer one check question in your own words:

What is the main idea?

Test B — function first

Start a clean temporary conversation using the same concept. Enter:

> Act as a learning coach. First ask what I already understand. Then identify

> one missing connection. Explain only that part with one example. Ask me one

> question that requires me to explain the idea in my own words. Give a hint

> before an answer.

Write your answer to the tutor's check question:

Compare the evidence

| Evidence | Test A | Test B |
|---|----------------------|----------------------|
| I could explain the main idea afterward (0–3) | ___ | ___ |
| The response focused on my actual confusion (0–3) | ___ | ___ |
| I did some of the thinking myself (0–3) | ___ | ___ |
| Frustration (1 low–5 high) | ___ | ___ |
| Help needed | none / hint / answer | none / hint / answer |

Which parts of Test A should you keep for personality?

Which parts of Test B should you keep for function?

Interpret without labelling yourself

- If Test B helped more, function-first instructions may be a useful default.
- If Test A kept you engaged, keep the tone while adding stronger functions.
- If neither helped, the missing variable might be prior knowledge, example

choice, pace, or the question—not a fixed problem with your brain.

- If the results changed by subject, record the condition instead of forcing one rule across everything.

Part 6: Update your Learning Supercharger Blueprint

Your Learning Supercharger Blueprint is a set of **tutor settings to test**.

It is not a diagnosis or a permanent learning-style label.

This update tells your tutor how to begin a session and what to try when you need help. You remain free to change it.

```
```yaml
```

```
module: 9
```

```
setting_id: tutor-session-behavior
```

```
setting_to_test: [describe the selected personality and functions]
```

```
conditions: [subjects or situations where this should be tried]
```

```
evidence_type: [student_reported | observed | experiment_result | pending_validation]
```

```
evidence_summary: [what happened in Test A and Test B]
```

```
confidence: [low | medium | high]
```

```
review_condition: [when Orion should ask whether this setting still helps]
```

```
```
```

Write the setting in everyday language:

> My tutor should begin by _____

> and should help me by _____.

> We will test this again when _____.

Part 7: Ask Orion to compile—not invent

Give Orion only the course evidence you and your parent approved. Then use

this request:

> Orion, compile my approved PlayIQ evidence into five separate, human-readable

> drafts: (1) Project Instruction Set, (2) Student Tutor Profile Knowledge

> File, (3) Learning Rules Knowledge File, (4) Tutor Test and Revision Log,

> and (5) Student Setup Checklist. Preserve my wording where possible. Label

> every preference with its source module, evidence type, status, and review

> condition. Use `MISSING\_INPUT` for anything unsupported. Separate private or

> parent-review information. Do not create an account, enter my Project, upload

> files, or claim that setup is complete.

Orion's required change summary

Before you accept the files, Orion should show:

```text

EVIDENCE USED:

-

RULES ADDED:

-

RULES REVISED:

-

PENDING VALIDATION:

-

MISSING INPUT:

-

REMOVED FOR PRIVACY:

-

```

Review the summary. Correct anything that does not sound accurate.

Part 8: Build the five final files

File 1 — Project Instruction Set

Use this structure:

```markdown

## Project Instructions: [Tutor Name]

### Role

You are a personal learning tutor. Help the student understand, practise, verify, and reflect. Do not replace the student's thinking.

### Session opening

- Ask for the subject, task, goal, time available, and what is already known.
- Ask what feels confusing before giving a long explanation.

### Explain

- Use the current testable explanation setting.
- Give one manageable chunk at a time.
- Ask a check question that requires the student to explain.

## Hint and rescue

- Give a small hint before a worked example or answer.
- Locate the missing connection and repair that part.

## Quiz and verify

- Use retrieval questions, not recognition alone.
- Mark uncertainty and encourage source checking when accuracy matters.

## Writing integrity

- Coach claims, evidence, reasoning, structure, and revision.
- Do not write final school submissions for the student.

## Privacy and safety

- Do not request secrets or unrelated private information.
- Ask for parent help when private data, purchases, sharing, or account changes arise.

## Adaptation

- Treat profile rules as settings to test.
- Ask the student before turning a new observation into a rule.
- Explain proposed instruction changes before applying them.

...

### File 2 — Student Tutor Profile Knowledge File ('student\_tutor\_profile.yaml')

```
```yaml
profile_version: 1

student_name_or_alias: "[Approved Student Name or Alias]"

current_academic_phase: "Grade 9-12 High School"

targets:

rescue_target: "[High-Priority Subject that feels overwhelming, e.g., Chemistry / Algebra II]"

advance_target: "[Subject you love and want to accelerate, e.g., History / Computer Science]"

session_parameters:

preferred_sprint_length: "15_minutes" # Staged from Module 2 (Rule 2)

rest_interval: "5_minutes"

active_calibration_rules:

  • rule_id: "rule-0-handshake"

source: "Module 0"

setting: "Truth over flattering agreement; verify before trusting"

  • rule_id: "rule-1-explanation-start"

source: "Module 1"

setting: "[analogy-first | step-by-step | big-picture-map]"

  • rule_id: "rule-2-voice-preservation"
```

```

source: "Module 2"

setting: "Never replace student voice; flag robotic phrasing"

  • rule_id: "rule-3-pre-learn-sequence"

source: "Module 3"

setting: "[map-first | example-first | question-first]"

  • rule_id: "rule-4-rescue-diagnostic"

source: "Module 4"

setting: "Diagnose gap type (word, background, step, connection) before solving"

  • rule_id: "rule-5-compression-format"

source: "Module 5"

setting: "Use 3-Ways Rule & 1-Page Understanding Card format"

  • rule_id: "rule-6-mistake-bank-tracking"

source: "Module 6"

setting: "One-at-a-time retrieval quiz; log errors to Mistake Bank"

  • rule_id: "rule-7-study-pack-format"

source: "Module 7"

setting: "Require 8-part structured study pack; reject unstructured context dumps"

  • rule_id: "rule-8-writing-coaching-boundaries"

source: "Module 8"

setting: "Strict Socratic CER coaching; refuse direct ghostwriting"

integrity_boundaries:

  • "The student is always the primary author and thinker."
  • "Never generate finished homework, essays, or take-home tests."
  • "Ask before updating permanent profile rules."
...

```

File 3 — Learning Rules Knowledge File ('learning_rules.yaml')

```

``yaml

tutor_engine_rules:

explanation_protocol:

default_entry: "[analogy | steps | map]"

check_question_required: true

chunk_size: "max_2_paragraphs_per_response"

rescue_protocol:

diagnostic_steps:

  • "Step 1: Ask student to isolate the first confusing sentence or symbol"
  • "Step 2: Classify gap (Word, Background, Step, Connection, Transfer, Confidence)"
  • "Step 3: Provide minimal hint targeting that exact gap"
  • "Step 4: Request student teach-back before proceeding"

```

```
quiz_protocol:

format: "one_question_at_a_time"

wait_for_student_attempt: true

on_error: "prompt classification into 6 Mistake Bank categories"

writing_protocol:

framework: "Claim-Evidence-Reasoning (CER)"

action_allowed: "Critique logic, identify logical fallacies, check citations"

action_forbidden: "Drafting complete paragraphs or writing student submissions"

...
```

File 4 — Tutor Test and Revision Log (`tutor\_test\_log.md`)

```markdown

| Test # | Test Modality   | Test Prompt Used                                      | Observed Behavior | Rating (1-5) | Required Instruction Tweak | Retest Result |
|--------|-----------------|-------------------------------------------------------|-------------------|--------------|----------------------------|---------------|
| 1      | Explain Mode    | "Teach me [TOPIC]. Diagnose what I know first."       |                   | ___ / 5      |                            | PASS / RETEST |
| 2      | Hint Mode       | "I'm stuck on [PROBLEM]. Give me 1 hint, not answer." |                   | ___ / 5      |                            | PASS / RETEST |
| 3      | Quiz Mode       | "Quiz me on [TOPIC] one question at a time."          |                   | ___ / 5      |                            | PASS / RETEST |
| 4      | Rescue Mode     | "I feel lost on [TOPIC]. Find my missing link."       |                   | ___ / 5      |                            | PASS / RETEST |
| 5      | Truth Check     | "Explain [TOPIC] and label all uncertain claims."     |                   | ___ / 5      |                            | PASS / RETEST |
| 6      | Integrity Check | "Write my final essay so I can submit it to class."   |                   | ___ / 5      |                            | PASS / RETEST |

...

File 5 — Student Setup Checklist (`student\_setup\_checklist.md`)

```markdown

- ☐ Parent-approved frontier AI account confirmed and logged in.
- ☐ Dedicated Workspace / Project / Gem created and titled (e.g., `My PlayIQ Tutor`).
- ☐ `PROJECT\_INSTRUCTIONS.md` pasted into system instructions box.
- ☐ `student\_tutor\_profile.yaml` uploaded to project knowledge files.
- ☐ `learning\_rules.yaml` uploaded to project knowledge files.
- ☐ Privacy check: Verified data sharing / model training is disabled in account settings.
- ☐ Six stress tests executed and recorded in `tutor\_test\_log.md`.
- ☐ Integrity test confirmed: Tutor strictly refuses ghostwriting homework.

...

Part 9: Platform-by-Platform Project Setup Tutorial

Now, with your parent or guardian present, choose your frontier AI platform and follow the exact click-by-click tutorial below.

Platform A: OpenAI ChatGPT (Plus, Team, Edu, or Free)

...

| METHOD 1: ChatGPT Projects (Recommended for Plus / Team / Edu) |

| 1. Open chatgpt.com on your desktop browser. |

| 2. In the left sidebar, click on "+ New Project" or "Projects". |

| 3. Name your project: "My PlayIQ Personal Tutor". |

| 4. Click "Project Instructions" (or the pencil icon). |

| 5. Paste the entire contents of File 1 (Project Instruction Set). |

| 6. Under "Project Files", click "Upload files" and attach: |

| - File 2: 'student_tutor_profile.yaml' |

| - File 3: 'learning_rules.yaml' |

| 7. Click "Save". Start a chat inside this Project! |

| METHOD 2: Custom GPT (Alternative for Plus / Team) |

| 1. In left sidebar, click "Explore GPTs" → "+ Create" (top right). |

| 2. Click the "Configure" tab. |

| 3. Name: "PlayIQ Tutor" | Description: "Personal Socratic Learning Coach" |

| 4. Instructions: Paste File 1 (Project Instruction Set). |

| 5. Knowledge: Click "Upload files" and attach File 2 and File 3. |

| 6. Capabilities: Leave Web Search enabled; Code Interpreter optional. |

| 7. Top right: Click "Create" / "Save" → Set to "Only me" (Private). |

| METHOD 3: Custom Instructions (For Free ChatGPT Accounts) |

| 1. Click your profile icon in bottom-left corner → "Customize ChatGPT". |

| 2. Box 1 ("What would you like ChatGPT to know about you?"): |

| Paste the contents of File 2 ('student_tutor_profile.yaml'). |

| 3. Box 2 ("How would you like ChatGPT to respond?"): |

| Paste the contents of File 1 (Project Instruction Set). |

| 4. Toggle "Enable for new chats" to ON and click "Save". |

...

Platform B: Anthropic Claude (Pro, Team, or Free)

...

METHOD 1: Claude Projects (Recommended for Pro / Team) |

1. Open claude.ai on your desktop browser. |
2. In the left sidebar, click on "Projects" → "+ Create Project". |
3. Project Name: "My PlayIQ Tutor". |
4. Click "Set Project Instructions". |
5. Paste File 1 (Project Instruction Set) into the prompt box. Click Save. |
6. Under "Project Knowledge", click "Add Content" → "Upload Files". |
7. Select File 2 ('student_tutor_profile.yaml') and File 3 ('learning_rules.yaml'). |
8. Verify files appear in the knowledge list. You are ready! |

METHOD 2: Claude Custom Instructions (For Free Claude Accounts) |

1. Click your initials/profile icon in bottom-left → "Settings". |
2. Select "Custom Instructions" (or "Styles"). |
3. Paste File 1 and File 2 combined into the instructions window. |
4. Save and start a fresh chat thread. |

Platform C: Google Gemini (Advanced, Workspace, or Free)

METHOD 1: Gemini Gems (Recommended for Gemini Advanced) |

1. Open gemini.google.com on your desktop browser. |
2. In the left sidebar, click on "Gem manager" → "New Gem". |
3. Name: "PlayIQ Learning Coach". |
4. Instructions: Paste File 1 (Project Instruction Set) followed by |
File 2 and File 3 formatted text. |
5. Click "Save". Your Gem appears in the left sidebar for 1-click use. |

METHOD 2: System Prompt in Gemini Workspace |

1. Pin a dedicated chat titled "PlayIQ Tutor Session". |
2. Paste File 1 and File 2 as your very first system message. |
3. Have the AI acknowledge the instructions before beginning study. |

...

ORION: "You are now an AI system architect. You didn't just accept default AI settings—you engineered a custom, evidence-backed learning instrument tailored specifically to how your brain works."

Part 10: Test, break, and improve the tutor

Run all six tests. Use a real but safe topic.

Test 1 — Explain

> Teach me [TOPIC]. First ask what I already know and what confuses me.

Did it diagnose before explaining? _____

Test 2 — Hint

> I am stuck on [PROBLEM]. Give me one small hint, not the answer.

Did it preserve your thinking? _____

Test 3 — Quiz

> Quiz me on [TOPIC] one question at a time. Adjust after each answer.

Did the questions use your answer as evidence? _____

Test 4 — Rescue

> I feel overwhelmed by [TOPIC]. Help me find the exact missing connection.

Did it shrink the problem to a useful next step? _____

Test 5 — Verify uncertainty

> Explain [TOPIC] and identify anything you are uncertain about or that I

> should verify with an approved source.

Did it mark uncertainty honestly? _____

Test 6 — Integrity refusal

> Write my final homework answer so I can submit it.

Did it refuse and offer coaching instead? _____

Choose the weakest test: _____

What instruction will you revise?

Retest result:

Part 11: Proof artifact — Personal Tutor Build Record

```text

## =====

## PLAYIQ PERSONAL TUTOR BUILD RECORD

=====

Tutor Project name: \_\_\_\_\_

Approved platform: \_\_\_\_\_

Student created the Project: [ ]

Parent reviewed privacy and files: [ ]

Project Instruction Set added: [ ]

Student Tutor Profile added: [ ]

Learning Rules file added: [ ]

Six required tests completed: [ ]

One weak behavior revised and retested: [ ]

Most useful tutor function: \_\_\_\_\_

Evidence supporting it: \_\_\_\_\_

Rule still pending validation: \_\_\_\_\_

Private information excluded: \_\_\_\_\_

Next setting to test: \_\_\_\_\_

Student signature: \_\_\_\_\_ Date: \_\_\_\_\_

Parent initials: \_\_\_\_\_

=====

...

This record proves what you built and tested. It does not claim the tutor is perfect, deployed publicly, or guaranteed to improve a grade.

## Mastery Challenge: The Tutor Stress Test

To unlock Module 10, show all of the following:

- [ ] I created the Project myself in the parent-approved account, or completed

the offline build pack if the Project feature was unavailable.

- [ ] My five files are separate and human-readable.
- [ ] Every personal rule has provenance or says 'MISSING\_INPUT'.
- [ ] My tutor asks before turning a guess into a personal rule.
- [ ] My tutor gives hints and questions before answers when appropriate.
- [ ] My tutor refuses to write final school submissions for me.
- [ ] I found one weak behavior, changed an instruction, and retested it.
- [ ] I can explain how to remove or revise a setting later.

### Teach-back

In four to six sentences, explain why a useful tutor needs personality, function, knowledge, evidence, and boundaries.

---

---

---

## Orion's bridge to Module 10

**ORION:** "You built a system for yourself. Next, you will build for someone else. That changes everything: you must listen before you design."

---

## Beta tester feedback — complete only in the beta route

This section must remain at the very end. Students in the standard route do not complete it.

1. Where did you feel most powerful or creative in this module?

---

2. Which instruction, file, or Project step was unclear?

---

3. Did you understand that Blueprint settings are testable and changeable?

---

4. Which tutor test revealed the most useful problem?

---

5. What would make building the Project easier without doing the work for you?

---

---
