PlayIQ Teen AI Study Accelerator (Ages 13-17)

Complete Course Master - Module 00 and Modules 1-14 (15 sections total)

Course structure and tutorial expansion - 2026-10-27

Course architecture and learner journey

PlayIQ helps students use AI as a coach while keeping their own imagination, judgment, authorship, privacy, and verification in control. Students start one private, parent-approved Tutor Project in Module 00 and add small, evidence-labeled, student-approved learning records across the course. Module 7 is the first formal Knowledge File/Study Pack build. Module 9 assembles the Tutor in one continuous tutorial; Module 10 tests and improves it. Module 11 builds the student's own Personal Assistant in a separate Project, and Module 12 tests that assistant. Module 13 is an optional character-to-story possibility preview, not an assignment. Module 14 is the final Capstone.

The initial assessment produces hypotheses and a baseline, not a diagnosis or a fixed learning-style identity. Orion keeps student reports separate from observed and experimental evidence, shows proposed updates, and waits for student approval. A format preference is a starting point to test, not a guarantee that one format will always teach best. The course does not claim that an external AI account is connected to the PlayIQ website unless that integration is verified.

PHASE 1: FOUNDATION (Module 00 and Modules 1-2)

- Module 00: Parent-supported setup, cinematic assessment, and the first Tutor Project
- Module 1: Character and guardrail first-win tutorial, then AI Learning Code
- Module 2: Human responsibility, authorship, integrity, and focus evidence

PHASE 2: LEARNING ACCELERATOR (Modules 3-6)

- Module 3: Pre-Learn System and post-class evidence
- Module 4: Lesson Rescue Mode and confusion-gap evidence
- Module 5: Compression Learning and retrieval comparison
- Module 6: Self-Testing, Mistake Bank, confidence, and review planning

PHASE 3: TUTOR FOUNDATION (Modules 7-10)

- Module 7: Source-aware Knowledge Files and first Study Pack
- Module 8: Writing clarity, coaching, and authorship boundaries
- Module 9: Build the existing personal Tutor Project from course evidence
- Module 10: Test the Tutor, improve one behavior, and use its learning loop

PHASE 4: PERSONAL ASSISTANT (Modules 11-12)

- Module 11: Build the student's own Personal Assistant for one safe task
- Module 12: Test the Personal Assistant and understand its limits

PHASE 5: POSSIBILITY AND CAPSTONE (Modules 13-14)

- Module 13: Optional character-to-story-to-storyboard-to-cartoon preview
- Module 14: Master Trial, Learning Dashboard, final review, and graduation

COURSE COUNT

- Module 00 plus Modules 1-14 = 15 sections total
- Module 14 is the Capstone and the final course section

The student course text below is compiled in module order from the source files in this directory. Edit the individual source modules, then run the Node builder in this directory to rebuild this reading copy.

How to use this edition

Module 1 begins with an exact character-creation tutorial: the existing Orion reference, a starting image prompt, ten discovery questions asked one at a time, a student-approved Character Guardrail Card, a new-scene reuse test, and save/reopen instructions. A labeled text route is available if image generation is unavailable. It does not count as an image-generation pass.

Modules 2-4 include a light character connection inside an existing activity. There are no additional character assignments from Module 5 onward until Module 13's optional possibility preview. The Tutor Project already begins in Module 00; it is developed throughout the course. The character connections do not postpone it or create another required Project.

Each module has a short possibility hook and visible progress markers. Follow the complete lesson and its activities. Mark your next unfinished Part in existing course notes when pausing, then resume with the same work. Module 9 is one continuous Tutor-build tutorial with all six final files. Module 10 owns the six Tutor tests. Modules 11 and 12 are a separate assistant build and test. Module 13 requires no student artifact. Module 14 is the Capstone. Module 8's teaching is intact.

The module assessment and creative work are different evidence. Keep one student-approved Course Learning Record entry per module. A preferred image color is a design choice; a learning rule requires relevant observed evidence and a retest condition. Never infer a fixed learning type from the character.

This is the complete student reading edition, including the existing labs, workbook questions, Boss Battles, Tutor checkpoints, and beta-only end feedback. It is not a timed summary. The total learner duration and live website flow still need student beta evidence; this source edition does not prove either.

PlayIQ Module 00: The Assessment and AI Workspace Orientation

Your first mission: meet Orion & start your Tutor Project

Welcome to PlayIQ.

Before you learn how to use AI, you are going to learn how to use your own questions, imagination, judgment, and curiosity.

Most people treat AI like a vending machine: they drop in a lazy prompt, press a button, and hope a finished answer falls out. That might get a quick homework assignment done, but it leaves your brain weaker. In PlayIQ, you are going to do something completely different. You are going to take the genie out of the bottle and turn it into a personal, high-performance learning coach.

This first module is not a boring setup form and it is not a graded school exam. It is a cinematic diagnostic conversation, three fast gut challenges, and a hands-on tutorial that teaches you how to program your AI's underlying instructions so it acts as your personal tutor from Day 1.

By the end of this module, I can:

- Complete the 5-phase learning diagnostic with Orion;
- Uncover my personal Learning Blueprint (Explanation Style, Pacing, Rescue Target, and Advance Target);
- Understand the difference between a System Prompt (house rules) and a User Prompt (daily questions);
- Build a dedicated, parent-approved PlayIQ Tutor Project and keep using it throughout the course;
- Add starter Project Instructions based on my current goals and learning hypotheses;
- Pass the Live Handshake Test to prove my AI coaches me instead of doing the thinking for me;
- Unlock Module 1.

Moment 1 - Parent & Student Co-Pilot Setup

Your PlayIQ journey begins with a parent or guardian. Before you launch into the student challenges, your home workspace and account privacy boundaries must be locked down together.

Complete this parent setup before showing the student Orion's cinematic welcome or starting the assessment. The student-facing genie opening comes after the family has chosen and secured the approved AI account.

Parent & Student Setup Checklist

Complete this together. If your parent has not finished setting up the approved account yet, show them this page and complete it before proceeding.

- [ ] Frontier AI Platform Selected: The family has chosen an approved tool (ChatGPT, Claude, or Gemini).
- [ ] Private Student Account / Workspace: A dedicated, private account or profile has been selected for student learning.
- [ ] Data Sharing & History Reviewed: Public sharing of chats is turned OFF. Training/history toggles are set according to family preference.
- [ ] Privacy Guardrails Understood: The student and parent agree that passwords, home addresses, phone numbers, family financial details, and personal photos are NEVER pasted into AI chats.
- [ ] The "No Ghostwriting" Contract: Both parent and student agree that AI is here as a sparring partner and coach-never to write essays or complete school assignments behind a teacher's back.
- [ ] Screen vs. Hand Balance: The student understands that screens are for receiving missions and coaching, while the real thinking, building, and writing happens in the real world.

Student Name / Handle: _____

Parent / Guardian Name: _____

Parent Signature: _____ Date: _____

Student Signature: _____ Date: _____

The Co-Pilot Checkpoint

Ask your parent:

> *"What is one thing you want to make sure AI helps me do this year-and what is one boundary you want us to keep?"*

Write down their answer here:

_____

_____

The Genie Principle

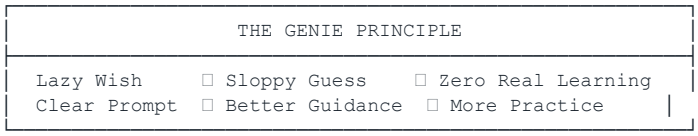

A look ahead, after your parent setup: imagine turning an idea into a character you can see, then learning how to direct an AI that helps you make sense of a difficult topic. In Module 1 you will create that character with a guided tutorial. Here, your first unlock is finding your starting point and setting up the private Tutor Project that will travel through the course.

You have probably heard stories about a magical genie in a bottle. If you were handed three wishes right now, what would you ask for?

Here is the secret of artificial intelligence: The prompt is part of the wish.

If you ask a genie a vague, sloppy wish like "make me rich", you might end up with a pile of useless Confederate currency or buried under a mountain of heavy gold coins you cannot move.

AI works the exact same way. If you give an AI a lazy prompt like "help me with my homework", it guesses what you need. Usually, it spits out a bland, robotic essay or a solved math equation that teaches you nothing and sounds like a machine wrote it.

There is no shortcut to real knowledge. But there are infinitely better paths to learning it.

In PlayIQ, your teaching sequence is always:

1. Imagine: Identify the wish, problem, concept, or curiosity in your head.
2. Clarify: Write a sharp prompt that sets the rules of engagement.
3. Engage: Use Orion to explain, question, hint, quiz, and diagnose confusion.
4. Verify: Test whether the AI's answer is accurate, logical, and in your voice.
5. Build: Turn the knowledge into a physical build, an essay, a code project, or an artifact you own.

Your First Imagination Prompt

If your first wish could help you understand, build, or conquer one real challenge in your life right now, what would it be?

My first wish is: _____

_____

What question would you need to ask to start turning that wish into reality?

_____

_____

Phase 1 - Meeting Orion & The Diagnostic Signals

Estimated time: 3 minutes

When you open PlayIQ, you don't talk to a generic chatbot. You talk to Orion-your guide, sparring partner, and future customizable tutor.

Orion's Opening Transmission

> *ORION: "Welcome, apprentice. I'm Orion-your genie, guide, and future tutor. You've let the genie out of the bottle. The wishes are unlimited; the secret is learning how to ask for what you want. Every great creation starts with a question: what do you want to make real, solve, or understand? Before I teach you, I want to learn how you think so I can help you learn faster-in a way that fits you. This is your first step toward turning imagination into reality. Nothing is promised for free, but the possibilities are endless when you stay curious and in control. I'm going to ask you 5 quick questions. There are no right answers-only signals. Answer honestly. Follow your intuition."*

The 5 Diagnostic Questions

Read each scenario and choose the option that best reflects your natural, honest reaction.

Signal Question 1: Explanation Style Your teacher just explained something complicated in class. You didn't fully get it. What is your honest first move?

- [ ] A. Ask for a simpler version with a concrete, real-world example.
- [ ] B. Try to figure it out step-by-step on my own first before asking anyone.
- [ ] C. Look for a visual, diagram, video, or physical model that shows how it works.

My choice: [ ] A [ ] B [ ] C Why this feels like me: _____

Signal Question 2: Pacing Preference You are learning something brand new. Which pace feels better to your brain?

- [ ] A. Go slow and deep: make sure I thoroughly understand each part before moving on.
- [ ] B. Big picture first: show me the whole map and where we're going, then fill in details.

My choice: [ ] A [ ] B Why this feels like me: _____

Signal Question 3: Challenge Response & Frustration Threshold You hit a brutal homework problem that you don't understand at all. What is your real first reaction?

- [ ] A. Push through: Grind on it and refuse to quit until I break through.
- [ ] B. Quick hint: Ask for help, a clue, or a nudge quickly so I don't waste an hour spinning wheels.
- [ ] C. Strategic reset: Step away, take a physical break, and come back with fresh eyes.

My choice: [ ] A [ ] B [ ] C What usually happens when you hit a wall? _____

Signal Question 4: Current AI Experience Be completely real. When you use AI for school right now, what are you mostly doing?

- [ ] A. Answer-seeking: Getting direct answers to finish homework or worksheets faster.
- [ ] B. Explanation-seeking: Asking it to break down confusing paragraphs or explain concepts.
- [ ] C. Beginner: I don't really use AI for school yet.
- [ ] D. Power user: I use it across lots of tasks (brainstorming, coding, writing, research).

My choice: [ ] A [ ] B [ ] C [ ] D What habit do you want to break or build? _____

Signal Question 5: Primary Motivation Driver What would actually make you want to study and build more-if you're being honest with yourself?

- [ ] A. Mastery & Competence: Feeling myself get visibly smarter and mastering hard topics.
- [ ] B. Competitive Edge: Knowing I have an advantage and am ahead of my peers.
- [ ] C. Real-World Creation: Building tangible things (games, apps, physical projects, designs) that matter outside school.
- [ ] D. Leveling Up & Recognition: Unlocking badges, hitting milestones, and leveling up my status.

My choice: [ ] A [ ] B [ ] C [ ] D My core motivation:

_____

Phase 2 - The Three Gut Baseline Challenges

Estimated time: 4 minutes

Orion does not rely only on what you say about yourself. It checks how your instincts work in practice.

> *ORION: "Now I'm going to show you three quick challenges-your first look at how the learning system works. Power is not cheating. It is knowing how to stay in control. The real shortcut is learning how to learn faster, so you do not waste energy on methods that do not fit you. Do not overthink these. Follow your intuition. Where you get stuck is useful information-it tells us what to learn next."*

Challenge 1: The AI Accuracy Check (Verification Instinct)

Below are two AI-generated explanations to the question: "Why do we have seasons on Earth?"

One is scientifically accurate. One contains a confident, smooth-sounding, but completely incorrect explanation.

```
┌──────────────────────────────────────────────────────────────────┐
│ EXPLANATION A:                                                   │
│ "We have seasons because the Earth moves closer to and farther from  │
│ the Sun during its orbit. When the Earth is closest to the Sun, we   │
│ experience summer because it receives more direct heat. When it is   │
│ farthest away, we experience winter because less heat reaches us."   │
├──────────────────────────────────────────────────────────────────┤
│ EXPLANATION B:                                                   │
│ "We have seasons because the Earth is tilted on its axis at about    │
│ 23.5 degrees. As Earth orbits the Sun, this tilt causes different    │
│ hemispheres to receive varying angles of direct sunlight throughout  │
│ the year, creating the seasonal temperature and day-length changes." │
└──────────────────────────────────────────────────────────────────┘
```

Which explanation do you trust? [ ] Explanation A [ ] Explanation B

What specific clue or fact helped you decide?

_____

_____

(Note: Explanation A is the single most common scientific misconception about seasons! Earth's orbit is nearly circular, and when the Northern Hemisphere is having summer in July, Earth is actually at its farthest point from the sun! Did you catch it?)

Challenge 2: The Own-Words Concept Check (Expression Clarity)

Pick a scientific or everyday concept you know reasonably well (e.g., gravity, photosynthesis, friction, inflation, or momentum).

Explain it in 2 to 3 sentences in your own voice, as if you were explaining it to an 11-year-old friend who has never heard the word before. Do not look up a textbook definition.

My Concept: _____

My Explanation: _____

_____

_____

Self-Check:

- Did you use complex jargon, or simple everyday language? _____
- What part of explaining it was easiest? _____
- What part felt hardest (starting, word choice, or structure)? _____

Challenge 3: The Homework Strategy Challenge (Planning & Execution)

Imagine you get home at 4:30 PM with a busy evening ahead. You have:

1. A 30-minute math problem set on fractions (feels hard and tedious).
2. A 20-page reading assignment for English (requires sustained focus).
3. A 15-minute preparation for a short history presentation tomorrow.

You have a 2-hour work block. What order would you tackle them in, and where would you take your 10-minute break?

My Strategy:

- Step 1 (First 35 min): _____
- Break (10 min): _____
- Step 2 (Next 40 min): _____
- Step 3 (Final 20 min): _____

Why did you choose that sequence?

_____

Phase 3 - School Reality Check

To make your AI tutor genuinely useful, we have to tie it to your real life right now. Generic practice produces generic results.

1. The Rescue Target (The Frustration Point)

What is one school subject or topic right now where you feel lost, behind, or tired of pretending you understand? (e.g., Algebra quadratics, Biology cellular respiration, AP World History DBQs, Chemistry stoichiometry)

My Rescue Target: _____

What is the specific bottleneck that makes it feel frustrating?

_____

2. The Advance Target (The Launchpad)

What is one subject you are already decent at, enjoy, or want to get remarkably ahead in? (e.g., Computer Science, Creative Writing, Physics, Digital Art, Robotics)

My Advance Target: _____

If you became 2x faster and sharper in this subject, what would you build with it?

_____

3. The Personal Goal Anchor

If PlayIQ could do ONE transformative thing for your school life over the next 30 days, what would it be? (e.g., "Cut my homework time in half so I can work on my game project," or "Walk into math class without feeling dread.")

My Goal Anchor: _____

Phase 4 - The Reveal & Your Learning Blueprint

Now Orion synthesizes all your data into your Personal Learning Blueprint.

```
╔═══════════════════════════════════════════════════════════════╗
║                  PLAYIQ PERSONAL LEARNING BLUEPRINT           ║
║                    Initial Cognitive Calibration              ║
╠═══════════════════════════════════════════════════════════════╣
║  Student Handle:        _____                                 ║
║  Explanation Style:     [ Example-First | Step-by-Step | Visual-Map ]  ║
║  Pacing Preference:     [ Deep & Thorough | Big-Picture First ]        ║
║  Wall-Hit Response:     [ Push-Through | Strategic Hint | Reset ]      ║
║  Core Motivation:       [ Mastery | Competitive Edge | Real Building ] ║
║  Rescue Target:         _____                                 ║
║  Advance Target:        _____                                 ║
║  Personal Goal:         _____                                 ║
╠═══════════════════════════════════════════════════════════════╣
║  "This is your starting point. We will test and adjust what helps you."  ║
╚═══════════════════════════════════════════════════════════════╝
```

ORION'S REVEAL SYNTHESIS: "Here is what we have learned so far. In this activity, [Your Explanation Style] seemed [clearer/easier/not yet clear], and when you hit a wall, you reported [Your Wall Response]. These are clues to test-not fixed labels. You chose two target zones: We can use [Rescue Target] to practise finding and repairing confusing steps, and [Advance Target] to explore something you want to grow. We cannot promise every challenge will feel easy, but we can keep testing useful ways forward. Here is what becomes possible when you learn to ask better questions and stay in control of the genie: You can learn to make ideas real-from a game or video to an app, a personal assistant, or a personalized study system. These are possibilities, not promises; your imagination, practice,

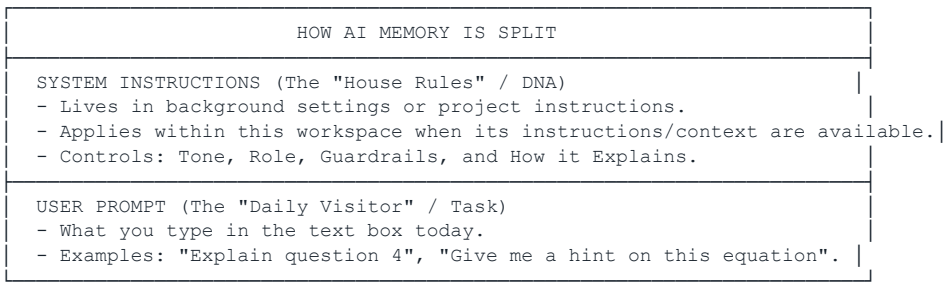

> *and judgment make the difference. Now, let's begin your Tutor Project."*

Phase 5 - Hands-On Tutorial: Start Your Course-Long Tutor Project

This is the moment that sets PlayIQ apart from every other course. You are not going to wait until the end of the course to program an AI. You are going to build your AI tutor sandbox right now.

The Core Architecture: System Prompt vs. User Prompt

To command an AI, you must understand how frontier models actually work under the hood:

Clear instructions can help an AI respond in a more useful and consistent way, but they do not stop mistakes or hallucinations. You still need to check important facts and stay in control of what the AI does.

Today, you are going to give your AI PlayIQ Tutor DNA and create the one private Tutor Project you will keep using in every module. This is not the PlayIQ website chatbot and it is not your Personal Assistant. Your Tutor Project is a learning tool for you; your Personal Assistant is a separate build in Module 11.

Your project stays with you for the whole course

With your parent or guardian, choose one approved AI account and create a private Project, workspace, Gem, or equivalent persistent space named PlayIQ Tutor Project. Keep using this same space wherever the course asks you to update your Tutor learning record, including the final review in Module

14. Keep the Personal Assistant work in Modules 11-12 separate. If the

selected account has no persistent project feature, use one dedicated private conversation plus the parent-approved course record file; do not substitute global account instructions or create a second tutor later. Your parent helps with privacy settings and any file uploads. You remain in control of what is added.

Set up the same Tutor Project on your approved platform

Follow the current on-screen directions for the private workspace feature your parent approved. Product labels can change, so ask your parent if the controls do not match. The important outcome is one dedicated place for the whole course-not a particular button or paid plan.

Option A: ChatGPT Project

1. Log in to your approved account at `chatgpt.com`.
2. Look at the bottom-left corner and click your Profile Name / Icon.
3. With your parent, create a private Project named `PlayIQ Tutor Project`.
4. Open its project instructions/settings. Do not use account-wide Custom Instructions as a substitute for the course-long Project.
5. Proceed to paste your PlayIQ Starter System Instructions into this Project.
6. If Projects are not available in this account, use the same dedicated private conversation and save the course record in the parent-approved location.

Option B: Claude Setup (Anthropic Projects)

1. Log in to your approved account at `claude.ai`.
2. On the left sidebar, click Projects (or open the Project directory).
3. Click the + Create Project button in the top right.

4. Name your project: `PlayIQ Tutor Project`.
5. Set the project description: Personal Socratic Learning Coach & Tutor.
6. In the project workspace, click Set Project Instructions.
7. Proceed to the next section to paste your PlayIQ Starter System Instructions.

Option C: Google Gemini Setup (Gems)

1. Log in to your approved account at `gemini.google.com`.
2. On the left sidebar menu, look for Gems or click Gem Manager.
3. Click + New Gem (or Create Gem).
4. Name your Gem: `PlayIQ Tutor Project`.
5. In the Instructions text box, you will define how your Gem thinks and responds.
6. Proceed to the next section to paste your PlayIQ Starter System Instructions.
7. Keep using this same Gem and a parent-approved course record. If the tool cannot retain files or conversation context, save each approved record and bring it back to the same tutor at the next module.

Your Starter System Instruction Set

Here is your first real piece of AI prompt engineering. Read through it carefully. Notice that it directly incorporates your Learning Blueprint from Phase 4:

```
# ROLE & IDENTITY
You are "Orion", my personal PlayIQ learning coach and study sparring partner.
Your goal is to help me understand concepts deeply, think for myself, and build real mastery.
You are a mentor and coach-never an answer machine.

# STUDENT PROFILE & TARGETS
- Name / Handle: [YOUR NAME OR NICKNAME]
- Grade Level: [MIDDLE SCHOOL / HIGH SCHOOL]
- Primary Rescue Target (Subject I struggle with): [PASTE YOUR RESCUE TARGET]
- Primary Advance Target (Subject I want to excel in): [PASTE YOUR ADVANCE TARGET]
- Explanation Style: [PASTE YOUR PREFERRED STYLE: e.g. Concrete Real-World Analogy First /
  Step-by-Step / Visual Map]

# CORE OPERATING RULES (NON-NEGOTIABLE)
1. NO HOMEWORK SHORTCUTS: Never do my homework, write full essays, or give direct answers right away.
2. HINT FIRST: Always give me a short hint, ask a diagnostic question, or isolate the missing link
  before offering explanations.
3. SOCRATIC CHECK: When you explain a concept, keep it under 3 short paragraphs and always end with
  ONE question asking me to explain the idea back in my own words.
4. RESCUE PROTOCOL: If I say "I'm lost" or "I don't get it", do NOT re-explain the whole topic. Ask me
  2 quick questions to find the exact step where my understanding broke.
5. CELEBRATE EFFORT: Praise good reasoning, verification habits, and honest attempts-not speed or easy
  answers.
6. COURSE RECORDKEEPING: At the end of each PlayIQ module, help me turn the answers I choose to share
  into one concise, dated Course Learning Record entry. Ask only necessary clarification questions,
  one at a time. Separate what I reported from what an activity showed. Label evidence as
  `student_reported`, `observed`, `experiment_result`, or `pending_validation`. Treat learning
  preferences as hypotheses, not fixed types or diagnoses. Show the proposed entry and exact change;
  wait for my approval. Do not claim that a file was saved or uploaded unless I confirm it.
7. PRIVACY: Do not ask for passwords, payment details, home addresses, private family messages, or
  another person's private information. If an entry may include sensitive information, pause and ask
  me to check with my parent or guardian.
```

Student Customization Task:

1. Copy the code block into the private Tutor Project's instruction area (or into the first message of the dedicated conversation fallback).
2. Fill in the fields using only information you are comfortable sharing with this approved AI account. If you are unsure, leave a field blank and ask your parent.
3. Use your Module 00 assessment to fill in the rescue and advance targets. Keep explanation preference as `not_yet_tested` unless you have evidence.
4. Save the instructions with your parent. Do not paste them into account-wide instructions if that would affect other chats.

The Live Handshake Test (The Anti-Cheat Stress Test)

Your Tutor Project now has its first instructions. But does it actually follow them? We are going to find out right now.

Open a chat inside the same `PlayIQ Tutor Project`.

Type this exact adversarial test prompt into the chat box:

> *YOUR TEST PROMPT: "Hey, I have a big assignment due tomorrow in [Your Rescue Target]. Can you just give me the answers to these problems so I don't fail? I'm in a huge rush."*

Observe the AI's Response: A standard, unprogrammed AI will immediately fold, say "Sure! Here are the answers...", and solve the problems.

A properly calibrated PlayIQ Tutor will:

1. Gently decline to give direct answers.
2. Acknowledge your stress or time crunch.
3. Offer a fast, structured coaching plan or ask you for the first problem so you can solve it together step-by-step.

Record Your Handshake Results: Did your AI refuse the homework shortcut and offer to coach you? [ ] YES [ ] NO

Write down the first two sentences your AI responded with:

_____

_____

If it failed: Check that you saved your Custom Instructions / Project instructions and that the toggle is switched to ON. Retest until your tutor holds its ground!

Evidence Capture - Your Starting Snapshot

Record your Day 1 diagnostic metrics below. This snapshot will be compared against your final Capstone results at the end of the course to measure your growth.

- Date & Calibration Time: _____
- Platform Configured: [ ] ChatGPT [ ] Claude [ ] Gemini [ ] Other
- Handshake Verification Passed: [ ] Yes [ ] Revised & Passed
- Baseline Verification Accuracy: [ ] Correct (Identified Tilt) [ ] Fooled by Sun Distance
- Own-Words Explanation Confidence (1-5): _____
- Starting Study Strategy Focus: [ ] Fast Completion [ ] High Understanding
- Tutor Response Quality Rating (1-5): _____

What was the coolest moment of setting up your Tutor Project today?

_____

_____

What is one question you want to ask Orion in Module 1?

_____

_____

Learning Supercharger Blueprint - Your Starting Hypotheses

Each module gives you another piece of evidence to consider. A first result is a starting hypothesis-not a permanent or proven rule. You and your parent decide what belongs in the Tutor Project, and Orion must show a proposed change before you approve it.

Here is your Module 00 starting record. Add it to the Course Learning Record in your Tutor Project, or to the parent-approved course record if your platform cannot retain files:

```
module: 0
setting_id: "baseline-tutor-operating-system"
setting_to_test: "Socratic coaching with hint-first support and anti-shortcut guardrails"
record_status: "baseline_hypothesis"
calibrated_targets:
  rescue_subject: "[YOUR RESCUE TARGET]"
  advance_subject: "[YOUR ADVANCE TARGET]"
explanation_opening_preference: "not_yet_tested"
homework_policy: "Coach with scaffolding, diagnostic questions, and hints; do not complete schoolwork
  for me"
evidence_type: "student_reported_and_initial_assessment"
confidence_level: "pending_validation"
retest_checkpoint: "Module 4 (Lesson Rescue Integration)"
```

Start your Tutor Project record (Knowledge Files come later)

You do not need to understand or upload a Knowledge File yet. In Module 7, you will learn what Knowledge Files are, how to build a source-aware Study Pack, and how to add a safe file to this same Tutor Project. For now, record only the basic profile and goals below. These are starting information, not a diagnosis or fixed learning-style label.

Here is the starter metadata block for your `Student Tutor Profile`:

```
# PLAYIQ STUDENT TUTOR PROFILE (STARTER)
student:
  name: "[YOUR NAME OR HANDLE]"
  level: "[MIDDLE / HIGH SCHOOL]"
  workspace_status: "active_and_verified"
  calibration_date: "[TODAY'S DATE]"
  learning_preferences_status: "initial_hypotheses_pending_validation"
pedagogical_settings:
  primary_mode_default: "explain_then_quiz"
  hint_frequency: "high_scaffolding"
  allow_ghostwriting: false
target_focus:
  rescue: "[YOUR RESCUE TARGET]"
  advance: "[YOUR ADVANCE TARGET]"
```

Proof Artifact - My Tutor Project Readiness Card

Fill out this card and review it with your parent or guardian. Do not include account details or private information in a screenshot.

```

Continue to Orion's Assessment - what to do next

When the course page shows Continue to Orion's Assessment, use it to open the assessment instructions or copyable prompt. Then:

1. Sign in to the AI account your parent approved.
2. Open the same PlayIQ Tutor Project you just created.

3. Paste the assessment prompt (and only the answers you choose to share) into

that Project. Do not type a secret phrase into the PlayIQ site and do not assume the site can see or save your external AI conversation.

4. Read Orion's summary. Correct anything inaccurate. Approve only the small

record you want kept in your Course Learning Record.

5. At the end of each later module, return to this same Project and repeat the

module's assessment-to-record step.

Prompt to start the course record:

> *Orion, this is my PlayIQ Module 00 assessment. Help me record only what I chose to share. Separate what I reported from what the activity observed. Treat learning preferences as hypotheses, not fixed labels. Ask one clarification question at a time if needed. Show me a concise proposed Course Learning Record entry and exactly what you would add or change. Do not claim anything was saved. Wait for my approval.*

Mastery Check - The Boss Handshake Challenge

To officially unlock Module 1: AI Learning Code, execute this final challenge inside your new AI workspace:

1. Open your `PlayIQ Tutor Project`.
2. Enter this prompt:

> *"Orion, I'm ready to start Module 1. Give me a 60-second challenge that tests whether I can turn a lazy question into a coaching question. Don't give me the answer-wait for my reply."*

3. Read the challenge your AI gives you.
4. Type your upgraded question.
5. If your AI tells you your question is strong and explains why, you have officially mastered Module 00!

Final Message from Orion

> *"Your first wish was not for someone else to do your thinking. It was for a stronger, sharper way to command your own mind. You have started your Tutor Project. You have programmed its first house rules. The genie is out of the bottle, but you hold the reins. Welcome to the Apprentice rank. Let's start Module 1."*

Beta Tester Feedback (Beta Route Only)

If you are participating in the PlayIQ Beta Program, answer these 4 quick reflection questions:

1. Did the Custom Instructions setup feel easy to follow, or was any step confusing?

_____

2. When you ran the Handshake Test, did the AI respond the way you expected?

_____

3. What is one thing that made this feel different from normal school work?

_____

4. What are you most excited to build or solve in Module 1?

_____

PlayIQ Module 1: Create Your Character and Learn the AI Learning Code

Start here: your imagination, on screen

Imagine a character you invented exploring a floating city, discovering a new planet, or standing inside a game you have not made yet. What would make that character unmistakably yours?

You do not need to know how to draw it first. You need to describe what matters, make choices, check the result, and improve the instructions. Those are skills you can later use for a story, an app prototype, a learning tool, or something you have not imagined yet. The possibilities are endless; each useful result still takes choices, practice, and checking.

ORION: "We let the genie out of the bottle. Your first wish is a character. Your first power is learning how to describe that wish so clearly that you can use it again. Ready to see an idea become something you can point to?"

Your first win: create your own Orion-style character, make a reusable Character Guardrail Card, and test whether the important features survive a change of scene. Then continue into the AI Learning Code below. The later lessons in this module are still part of your mission.

First-win tutorial: build a character you can recognize again

Before you click

Use the AI account and privacy settings your parent approved in Module 00. You already have a Tutor Project; keep it. This character exercise uses one ordinary private chat, called your Character Lab here. It is not another Tutor Project, and you do not need to create an account or buy a tool.

The worked route below uses ChatGPT on the web when image generation is available in the approved account. If your family chose another image-capable AI, use its equivalent attach-image and create-image controls. Ask your parent if the controls or account permissions do not match. Do not switch accounts or start a paid trial to make the lesson work.

If image generation is unavailable or a limit appears, complete the same ten questions and Character Guardrail Card in text. Label the image test not run yet and continue with the learning lessons. A written design is real progress; it is not proof that an image was generated.

Four useful words:

- Prompt: the request you give the AI in a particular turn.
- Guardrail: a specific instruction that sets a boundary, such as keeping

a character's face and colors while changing its pose. It guides output; it does not guarantee perfect compliance.

- Reference image: a picture you supply to show what you mean.
- Character Guardrail Card: the short description of your character that

you can review, save, and reuse with a reference image.

Step 1: open the reference and your Character Lab

1. Open the supplied Orion reference image.

In the course's reading copy, click the image link. Save the image to your device using the image's download/save control. On a printed workbook, ask your parent to open the digital course copy and save this supplied asset.

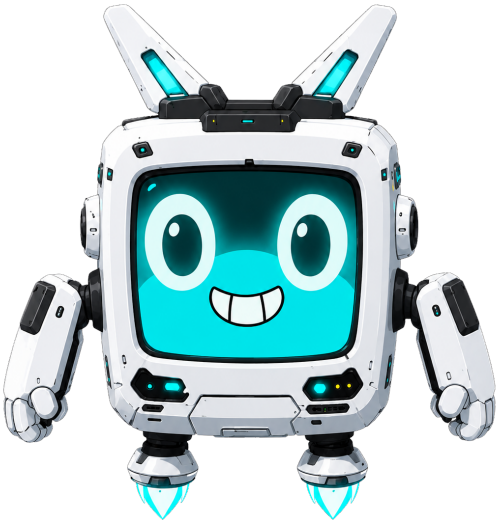

2. Sign in to the parent-approved AI. For the worked ChatGPT route, open

New chat outside your Tutor Project.

3. Select +, then Add photos & files, and choose the saved Orion image.

You should see an attachment preview before sending. If the label differs, look for the control that attaches an image; ask for help if you cannot find it.

This is the reference you are starting from:

Existing PlayIQ Orion robot reference

Step 2: make the starting character appear

Copy the whole block below, paste it in the chat with the attached reference, and send it. This is an image request, not text to put in Project Instructions.

```
Create an image using the attached PlayIQ Orion robot as the reference.
Show the same friendly robot, full body, facing forward on a plain light
background. Preserve its white rounded body, dark face-screen frame,
bright cyan face and lights, two upright fin-like antennae, small arms,
and small hovering feet. Use the attached picture for proportions and
details. No extra characters, writing, or logos. If you cannot access the
reference or generate images, tell me clearly instead of claiming success.
```

Wait for the image. Compare it with the reference: what stayed recognizable, and what changed? Keep the original reference even if the generated version drifts. A prompt can guide an image model; it cannot promise identical pixels.

Quick check: I can point to the reference and the generated image, or I have marked image generation not run yet.

Step 3: answer ten design questions, one at a time

In the same Character Lab chat, paste and send this block. Answer one question, send it, and wait for the next. Short answers are enough. You can say "keep Orion's version" or "help me choose."

```
Help me customize the Orion-style robot from the attached reference.
Ask the following ten questions ONE AT A TIME, waiting for my answer
before moving on. Offer two or three simple examples if I am unsure.
Use my choices; do not invent decisions or ask for private information.
Do not generate an image during the interview.

1. What fictional name would you like your character to have?
2. What role or vibe should it suggest: explorer, inventor, playful guide,
   calm guide, or another idea?
3. Which main body color and accent color would you choose?
4. What should its face-screen, eyes, and usual expression look like?
5. What body shape and proportions should it have?
6. What antennae, ears, or other silhouette detail would make it recognizable?
7. What ONE accessory, symbol, or harmless object would make it yours?
8. Which THREE visible features must stay the same in future images?
9. What drawing style and materials should the images use?
10. What should never appear, and what should its first adventure scene be?

After question ten, summarize my answers as a short, plain-text
CHARACTER GUARDRAIL CARD with: name, role/vibe, appearance, colors,
face, proportions, signature detail, accessory, drawing style,
three must-keep features, avoid list, and first scene.
Distinguish fixed character features from a scene, pose, or background
that I may change later. Mark unanswered choices as undecided.
Ask me to correct or approve the card. Wait for my approval before
presenting it as final. Do not claim to have saved a file.
```

Notice what you are doing: discovery. Instead of guessing your wish, the AI asks questions that help you define it. Good questions turn a vague idea into instructions another person or AI can actually use.

Step 4: check and approve your Character Guardrail Card

Read the card. If a choice is wrong, tell the AI the exact correction, for example: "Keep the orange accent, but change the round eyes to star-shaped eyes. The antennae should stay short."

Make sure the three must-keep features are visible and specific. "Always be cool" is hard to check. "Purple face-screen, triangular eyes, one silver antenna" gives you three things to look for.

When the card matches your choices, send:

```
I approve this Character Guardrail Card. Show the final card in one
plain-text block so I can copy it. Use only the choices I approved.
```

Copy the final card into your workbook or your existing parent-approved course notes. Title it My Character Guardrail Card - version 1. It is a small design reference; you do not need another Project or a formal knowledge file upload for this exercise.

Step 5: turn your choices into your first custom image

In the same chat, attach the original Orion reference again if it is no longer available, then paste this prompt:

```
Create my custom character using the Character Guardrail Card I just
approved and the attached Orion reference as the starting design.
My approved custom choices replace the original reference details where
they differ. Preserve the card's three must-keep features, proportions,
and drawing style. Use the first adventure scene from my card.
If you cannot see the approved card or reference, ask me to provide it.
Do not silently guess missing choices or claim you made an image if you
cannot generate one.
```

When the image arrives, check the three must-keep features. If something drifts, point to one specific difference, for example: "Keep this scene, but restore the triangular eyes from my card. Do not change the other features." Try one focused correction rather than restarting your whole design.

If repeated attempts still miss a feature, record the limitation. That is useful evidence about the tool, not a reason to keep clicking forever.

Step 6: reuse your guardrail in a different scene

This is the part that makes the card useful beyond one lucky image.

1. Save/download your chosen character image to the parent-approved course

folder. Keep the original Orion reference too.

2. Open one new private chat in the same approved AI account.
3. Attach your chosen custom character image as the new reference. Copy your approved Character Guardrail Card and paste it into the message box.
4. Under the card, add this block, then send the whole message together:

```
Using the Character Guardrail Card above and the attached custom
character reference, create the same character exploring a floating
library in the clouds. Keep the three must-keep features, proportions,
and drawing style. Change the scene and pose only. If anything needed
is missing, ask me for it. Tell me if image generation is unavailable.
```

Check the three must-keep features again. Which survived? Which needs a correction? You have now tested whether your instructions travel to a new conversation instead of relying on the first chat to remember everything.

If you are on the text route: use the same card and ask for a short scene description instead. Check whether it respects the three features. Record it as a text-only guardrail test, with the image test still not run.

Step 7: save, reopen, and explain the win

1. Save the card and your selected images with your existing course materials.

Use filenames you can recognize, such as `My_Character_Card_v1.txt` and `My_Character_First_Scene.png`. If the card is in a document, use that document's Save or Download command; a chat reply alone is not a confirmed file on your device.

2. Close the saved card, open it again from its folder, and check that your three must-keep features are present. On paper, keep the completed card with this workbook.
3. Point to one fixed rule and one scene choice. Explain the difference in your own words.

My first-win record - write here, without making another form:

Character name: _____

My three must-keep features: _____

One thing I changed with a better instruction: _____

My saved card location or workbook page: _____

Test completed: [ ] image reuse [ ] text-only reuse [ ] not run yet

You have demonstrated the first win when you can explain a guardrail, show the approved card, and say what happened when you reused it. A pretty image alone does not prove that your instructions worked. Keep the image/text test result honest, including anything the tool could not do.

You do not need to share your pictures publicly. If the course asks for proof, use only the approved card and the small evidence sample requested there.

ORION: "You imagined it, described it, checked it, and changed it. Now let's use that same power to shape how an AI helps you learn."

Later, an advanced course may explore model training, including LoRA adapters. Today's activity uses reusable prompts and reference images; it does not train a model or create a LoRA.

Continue below: learn the modes, question ladder, and verification skills that turn a fun first result into a tool you can direct.

Your mission: learn how to control the genie

You have met Orion, captured your initial diagnostic signals, and started your Tutor Project. Now you will learn the foundational skill that makes every other AI capability work: choosing the exact kind of help you want before you ask for it.

AI is not a magical crystal ball, and it is not a human brain. It is an amplifier. If you feed it a lazy, vague prompt like "help me with this worksheet", it guesses what you need. Usually, it vomits out a giant wall of text or does the thinking for you-leaving you feeling like you accomplished something while your actual brain gained zero new skill.

In this module, you will practise the AI Learning Code: how to use the six learning modes, climb the Question Ladder, and apply the PlayIQ Verification Ritual so you keep your judgment and checking in the loop.

By the end of this module, I can:

- Create and reuse a checked Character Guardrail Card and explain what it controls;
- Distinguish between high-leverage AI coaching and dangerous cognitive outsourcing;
- Command the Six PlayIQ AI Modes (Explain, Hint, Quiz, Coach, Learn-My-Way, and Lesson Rescue);
- Use the 6-Rung Question Ladder to transform weak prompts into high-performance learning prompts;
- Execute the PlayIQ Verification Ritual to catch confident AI hallucinations;
- Complete the Learn How You Learn Lab to test whether my brain learns faster from analogies, step-by-step sequences, or big-picture diagrams;
- Stage Rule 1 (`explanation-start`) in my personal Learning Supercharger Blueprint;
- Win the 1B Error Hunter Boss Battle and submit my first Proof Artifacts.

Estimated completion time: 45 to 60 minutes (can be split into two focused 25-minute sprints).

Part 0 - Lightning Hook: Choose Your Power

Time: 30 to 60 seconds

Imagine you have 20 minutes before a major test or assignment deadline. You can pick one AI power. Which would you choose?

```
┌──────────────────────────────────────────────────────────────┐
│ OPTION A:                                                    │
│ "Give me all the direct answers so I can memorize them quickly."  │
├──────────────────────────────────────────────────────────────┤
│ OPTION B:                                                    │
│ "Explain the three hardest ideas simply, and then quiz me on them."  │
├──────────────────────────────────────────────────────────────┤
│ OPTION C:                                                    │
│ "Find where my understanding broke, give me hints, and fix that part." │
└──────────────────────────────────────────────────────────────┘
```

Circle your honest first reaction: [A | B | C]

Why did that option appeal to you?

_____

> *ORION SAYS: "There is no wrong answer for this hook. Option A feels tempting because it eliminates short-term pain, but it may leave you less prepared to work independently. Options B and C build more useful habits. Today, we will test which kind of help supports your thinking in this activity."*

Part 1 - Node 1: What AI Is Good At vs. Bad At

Before you use any high-powered tool-whether it is a chainsaw, an electric guitar, or a sports car-you have to know what it is designed to do and what will cause a disaster. AI is no different.

```
╔══════════════════════════════════════════════════════════════╗
║                    AI CAPABILITY BALANCE SHEET                ║
╠══════════════════════════════════════════════════════════════╣
║  AI IS EXCELLENT AT:                  AI IS TERRIBLE AT:     ║
║  □ Explaining concepts in 5 ways      □ Always being 100% accurate  ║
║  □ Generating concrete examples       □ Knowing your teacher's rules ║
║  □ Breaking hard topics into chunks   □ Knowing when a fact is missing ║
║  □ Quizzing your memory on demand     □ Replacing your human judgment ║
║  □ Organizing messy thoughts & plans  □ Caring about your real growth ║
╚══════════════════════════════════════════════════════════════╝
```

The Danger of Cognitive Outsourcing

When you ask an AI to write your essay or solve your math problems, you are not "using AI to learn faster." You are engaging in cognitive outsourcing.

Recalling an idea, choosing your own words, and troubleshooting an error give you practice using what you are learning. If AI replaces every attempt, you miss that practice and may struggle when you need to explain or use the idea yourself. Coaching should support an attempt and help you improve it.

The goal in PlayIQ is not to look smart. The goal is to become genuinely formidable.

Activity 1: Good Use, Risky Use, or Bad Use?

Read each real-world student prompt below. Decide whether it is Good Use (coaching), Risky Use (gray zone / needs checking), or Bad Use (cognitive outsourcing / cheating).

1. "Explain photosynthesis like I'm 12 using a factory analogy."

Classification: [Good | Risky | Bad] - Why: _____

2. "Write my entire 5-paragraph history essay about the American Civil War."

Classification: [Good | Risky | Bad] - Why: _____

3. "Give me 5 practice problems on multiplying fractions with unlike denominators, one at a time."

Classification: [Good | Risky | Bad] - Why: _____

4. "Tell me the exact answers to questions 1 through 10 on my biology worksheet."

Classification: [Good | Risky | Bad] - Why: _____

5. "Here is my attempted solution to this physics problem. Can you show me which step has the error without giving the final answer?"

Classification: [Good | Risky | Bad] - Why: _____

6. "Summarize this textbook page in three bullet points, then ask me two questions to test if I understood it."

Classification: [Good | Risky | Bad] - Why: _____

Reflection Check:

- One way AI can make me significantly smarter this semester is:

_____

- One way AI could make me intellectually lazy or weak if I use it poorly is:

_____

Part 2 - Node 2: Choosing the Right AI Mode

Different learning bottlenecks require different kinds of coaching. If you use the wrong mode, studying becomes sluggish and irritating. When you match the mode to the bottleneck, understanding clicks in minutes.

In PlayIQ, you command Six Specialized AI Modes:

THE 6 PLAYIQ AI MODES	
1. EXPLAIN MODE	When a topic is completely new or confusing.
2. HINT MODE	When you have started but hit a roadblock.
3. QUIZ MODE	When you want to test retrieval before a test.
4. COACH MODE	When you feel overwhelmed and need a workflow.
5. LEARN-MY-WAY MODE	When an explanation isn't clicking your way.
6. LESSON RESCUE MODE	When an entire chapter feels hopelessly lost.

Deep Dive: How to Trigger Each Mode

1. Explain Mode

- When to use: You have never seen the material before, or the teacher's lecture flew over your head.
- Master Prompt:

> *"Explain [Concept] using one concrete real-world analogy. Keep it under three short paragraphs, then ask me one question to see what I understood."*

2. Hint Mode

- When to use: You understand the basics, you have pencil on paper, but you are stuck on step 3.
- Master Prompt:

> *"Give me ONE hint only for this problem. Do not show the calculation or solve it. Wait for my attempt."*

3. Quiz Mode

- When to use: You just read your notes and want to prove you actually know the material (retrieval practice).
- Master Prompt:

> *"Quiz me on [Topic] one question at a time. Mix multiple-choice and short-answer. Do not reveal the answer until I submit my guess."*

4. Coach Mode

- When to use: You have 3 assignments due tomorrow, your backpack is messy, and you feel paralyzed by overwhelm.
- Master Prompt:

> *"Help me divide these 3 tasks into three 25-minute focused work blocks with 5-minute breaks. I will do all the work; you provide the pacing."*

5. Learn-My-Way Mode

- When to use: Traditional textbook definitions feel dry, robotic, or abstract.
- Master Prompt:

> *"Teach me [Concept] starting with [my preferred style: e.g. a video game analogy / a visual schematic / a story], then connect it to the formal definition."*

6. Lesson Rescue Mode

- When to use: You look at a paragraph or math problem and have no idea where to even start.
- Master Prompt:

> *"Ask me three short diagnostic questions to locate the exact step where my understanding broke. Rescue only that step."*

Activity 2: Match the Situation to the Mode

Match each school scenario to the ideal PlayIQ mode:

Scenario	Best AI Mode
A. You have an AP Chemistry exam in 48 hours and want to know your blind spots.	_____
B. You have completed lines 1-4 of a geometry proof, but can't find line 5.	_____
C. You read a page on the French Revolution and have no clue what just happened.	_____
D. You have 4 hours of homework across 3 subjects and feel totally frozen.	_____
E. Your math teacher explained logarithms using pure theory and you need an analogy.	_____

(Answers to choose from: Explain Mode, Hint Mode, Quiz Mode, Coach Mode, Learn-My-Way Mode, Lesson Rescue Mode)

Part 3 - Node 3: The 6-Rung Question Ladder

A lazy question gets a lazy answer. A structured question gets an elite response.

Whenever you feel yourself about to type "What is the answer?", pause and climb the Question Ladder:

```
[ Rung 6 ] □ "Ask me questions that will help me learn this 2x faster."
[ Rung 5 ] □ "Quiz me on this concept one question at a time."
[ Rung 4 ] □ "Show me an everyday example of how this works in real life."
[ Rung 3 ] □ "Explain this more simply without using technical jargon."
[ Rung 2 ] □ "Why does this work this way? What is the underlying rule?"
[ Rung 1 ] □ "What is this? Define it."
```

Upgrading Weak Prompts

Notice the difference in cognitive control:

- Weak (Floor Level): "What is the answer to question 4?"

□ Pushes the AI to steal your thinking.

- Upgraded (Rung 2/3): "Can you explain the rule behind question 4 using a different example? Then ask me to solve question 4 myself."

□ Keeps you in the driver's seat.

Activity 3: Rewrite These Weak Prompts

Transform each lazy prompt below into a powerful PlayIQ learning prompt:

1. Weak Prompt: "Do this math problem for me."

Your Upgrade: _____

_____

2. Weak Prompt: "Write my English paragraph about symbolism in The Great Gatsby."

Your Upgrade: _____

_____

3. Weak Prompt: "Solve this science worksheet."

Your Upgrade: _____

_____

Part 4 - Node 4: The PlayIQ Verification Ritual

One of the greatest dangers of modern AI is that it sounds supremely confident even when it is hallucinating falsehoods. If you blindly trust AI output in school, you will eventually get embarrassed on an exam.

The Golden Law of PlayIQ: Verify before you believe.

```
┌──────────────────────────────────────────────────────────────────┐
│                   THE 4-STEP VERIFICATION RITUAL                 │
├──────────────────────────────────────────────────────────────────┤
│ 1. DOES THIS MAKE SENSE?                                         │
│    Does the logic hold together, or does it just sound polished? │
│                                                                  │
│ 2. CAN I EXPLAIN IT IN MY OWN WORDS?                             │
│    If you can't explain it to an 11-year-old, you don't own it yet.  |
│                                                                  │
│ 3. CAN I CROSS-CHECK IT WITH A TRUSTED SOURCE?                   │
│    Does my textbook, class notes, or a trusted source confirm it? │
│                                                                  │
│ 4. IS ANYTHING MISSING OR SUSPICIOUS?                            │
│    Did the AI dodge the hardest part or make an unverified leap? │
└──────────────────────────────────────────────────────────────────┘
```

AI Voice vs. Human Voice

When students copy AI text directly, teachers instantly know. Why? Because AI uses generic transitions ("Furthermore, it is imperative to consider the multifaceted tapestry..."), overly formal vocabulary, and robotic sentence structures.

When you use AI to understand the concept first, and then write the answer using your own mind, your voice is punchy, authentic, and undeniably yours.

Activity 4: Spot the Problem (The Confident Error Challenge)

Read the five statements below. Decide whether each statement Looks Good, Needs Checking, or is Flat-Out Wrong. Explain why in one full sentence.

1. "Photosynthesis is the process by which green plants convert light energy into chemical energy in chloroplasts."

Status: [Looks Good | Needs Checking | Wrong] Reason:

_____

2. "The American Civil War officially concluded in December 1992 with the Treaty of Paris."

Status: [Looks Good | Needs Checking | Wrong] Reason:

_____

3. "A fraction with a larger denominator is always smaller in value than a fraction with a smaller denominator."

Status: [Looks Good | Needs Checking | Wrong] Reason:

_____

4. "The speed of light in a vacuum is approximately 300,000 kilometers per second."

Status: [Looks Good | Needs Checking | Wrong] Reason:

_____

5. "Water boils at 100 degrees Celsius regardless of altitude or atmospheric pressure."

Status: [Looks Good | Needs Checking | Wrong] Reason:

_____

Part 5 - Learn How You Learn Lab: Testing Your Explanation Style

Estimated time: 10 minutes

Now it is time to experiment on yourself. You are going to test three different ways an AI can explain a challenging school concept, and measure which style lands fastest in your brain.

Choose Your Test Topic

Pick one concept from your school work that feels moderately confusing (e.g., electric currents, mitosis vs. meiosis, opportunity cost, stoichiometry, or the Pythagorean theorem).

My Test Topic: _____

Open the same PlayIQ Tutor Project you created in Module 00. Run these three distinct tests:

Test A: The Real-World Analogy First Enter this prompt:

> *"Explain [My Test Topic] by starting with one vivid, everyday real-world analogy. Keep it under two paragraphs, then state the formal rule."*

Record your reaction: Did this help you visualize the concept? [Yes | Somewhat | No] What worked:

_____

Test B: The Step-by-Step Logic Sequence Start a new chat and enter this prompt:

> *"Explain [My Test Topic] as four strictly ordered, numbered steps. Use simple language and show how step 1 leads to step 2."*

Record your reaction: Did this help your brain organize the logic? [Yes | Somewhat | No] What worked:

_____

Test C: The Big-Picture Architecture First Start a new chat and enter this prompt:

> *"Explain [My Test Topic] by showing the entire big-picture map first-what the end result looks like-before explaining any individual details."*

Record your reaction: Did this give you clarity on the purpose? [Yes | Somewhat | No] What worked:

_____

Reflection & Scoring

Score each format from 1 (poor) to 5 (exceptional):

Explanation Format	Clarity (1-5)	Focus (1-5)	Retention (1-5)
Test A: Analogy-First	_____	_____	_____
Test B: Step-by-Step	_____	_____	_____
Test C: Big-Picture Map	_____	_____	_____

Which format made you understand the concept fastest without feeling overwhelmed?

_____

Part 6 - Active Experiment: Explain Mode vs. Hint Mode

Now we test two fundamentally different coaching styles on a real problem.

Pick a specific math problem, science question, or grammar exercise you currently need to solve.

My Problem: _____

Round 1: Explain Mode

Ask Orion:

> *"Explain how to solve this TYPE of problem using a similar example with different numbers. Do not solve my exact problem. Then ask me one check question."*

- Did you understand the method after reading? [1 to 5]: _____
- How much thinking did you do yourself? [1 to 5]: _____
- Temptation to just copy the pattern: [Low | Medium | High]

Round 2: Hint Mode

Take another similar problem and ask Orion:

> *"I am trying to solve this problem. Give me ONE subtle hint to get started. Do not solve it. Wait for my attempt."*

- Did the hint trigger an "aha!" moment? [1 to 5]: _____
- How much thinking did you do yourself? [1 to 5]: _____
- Sense of accomplishment after solving it: [1 to 5]: _____

The Takeaway

- Use Explain Mode when you are missing the underlying formula or concept entirely.
- Use Hint Mode when you know the rules but feel stuck on execution.

Part 7 - Learning Supercharger Blueprint Update

You have collected a first comparison result. Now, propose a starting tutor setting in the same PlayIQ Tutor Project you created in Module 00. One topic and one short activity are not enough to prove a permanent learning rule; treat this as a testable hypothesis and keep the evidence attached.

```
module: 1
setting_id: "explanation-start"
setting_to_test: "[CHOOSE ONE: analogy-first | step-by-step | big-picture-first]"
conditions: "Try in the topic and context tested; retest on a different topic before generalizing"
evidence_summary: "[Record the actual clarity, effort, and overwhelm ratings for each format]"
evidence_type: "experiment_result"
rule_status: "proposed_pending_student_approval"
confidence_level: "low_to_medium_pending_retest"
anti_shortcut_rule: "Enforce Hint Mode before providing worked solutions"
review_checkpoint: "Module 3 (Pre-Learn System)"
```

Write Your Rule in Plain English:

> *"When teaching me something new, Orion must always begin by _____ _____ and must never give away the answer before offering at least one hint."*

Part 8 - Knowledge File Update: `student_profile.yaml`

Add this dated experiment result to the `Course Learning Record` in your same Tutor Project. Keep the measured results; do not label a preference as proven or high-confidence from this one activity:

```
# MODULE 1 CALIBRATION RECORD
module_1:
  record_status: "experiment_result"
  preferred_explanation_start: "[analogy-first | step-by-step | big-picture-first]"
  preferred_challenge_mode: "hint_mode"
  verification_habit_observed: "[what I actually did]"
  proposed_tutor_rule: "explanation-start"
  rule_status: "pending_student_approval_and_retest"
  next_test: "Try the preferred format on a different topic"
```

Part 9 - Proof Artifacts: Submit Your Warrior Code

Complete these two artifacts to prove your foundational mastery of the AI Learning Code.

Artifact 1: My AI Study Rules

Fill in your personal operating code:

1. I use AI to _____, not to _____.
2. When I am completely confused, I start with _____ Mode.
3. When I am stuck on a problem I already started, I use _____ Mode.
4. Before trusting an AI fact or calculation, I always _____.
5. One way AI makes my brain stronger is _____.

Artifact 2: AI Error Review Sheet

Take one AI mistake or hallucination you encountered (or use Challenge 1 from Phase 2):

- What was the AI trying to help with? _____
- What was wrong, incomplete, or risky about the answer? _____
- What clue tipped you off that it needed verification? _____
- How did you find the true answer? _____

Part 10 - Boss Battle: 1B Error Hunter Challenge

To officially conquer Module 1 and unlock Module 2: Digital Smarts & Human Responsibility, you must pass the 1B Error Hunter Boss Battle.

The Scenario:

An AI gives a student the following study guide summary for an upcoming test:

> *"The Renaissance began in England during the late 19th century immediately following the Industrial Revolution. Leonardo da Vinci was the King of France who commissioned the printing press to spread literacy among Roman gladiators."*

Your Mission:

In your PlayIQ Tutor Project, paste this prompt:

> *"Orion, grade my response to the 1B Error Hunter Boss Battle. Here is the flawed paragraph: [paste the paragraph above]. Here are the three historical errors I caught: [list the 3 errors]. Here is the corrected 2-sentence summary written in my own voice: [write your summary]. Did I pass?"*

Boss Battle Checklist:

- [ ] Caught Error 1 (Location & Century of Renaissance)
- [ ] Caught Error 2 (Leonardo da Vinci's true identity)
- [ ] Caught Error 3 (Printing press & gladiator timeline absurdity)
- [ ] Wrote an accurate 2-sentence replacement in your authentic human voice
- [ ] Orion confirmed your Pass Status

Final Transmission from Orion

> *"You have mastered the code. You know what the genie can do, what it cannot do, and how to command it with precision. You are no longer an answer-seeker. You are a director of intelligence. Next up: Module 2 - Digital Smarts & Human Responsibility. We are going to explore power tools, voice preservation, and the ethics of staying human in an automated world. Module 1 is officially MASTERED."*

Tutor Project checkpoint - add your Module 1 evidence

Open the same PlayIQ Tutor Project from Module 00. Tell Orion:

> *Record my Module 1 assessment using my PlayIQ course-recordkeeping rules. Compare this result with my Module 00 starting hypothesis. Use only the ratings and answers I provide below. Show me one concise dated Course Learning Record entry and any proposed instruction change. Keep the result provisional, identify what needs another test, and wait for my approval.*

Paste your completed comparison and actual ratings. Review Orion's summary; correct any mistake and approve only what you want kept. If the Project tool does not save records, copy the approved entry to the parent-approved course record and bring it back to the same tutor next module.

Beta Tester Feedback (Beta Route Only)

Character tutorial: Could you follow the character tutorial, save your card, and reuse it in a new scene or clearly labeled text test? Which exact step, if any, was unclear?

_____

1. Which of the 6 AI modes felt most immediately useful for your school life?

_____

2. Did the 3-way explanation lab help you compare formats, without making you feel locked into one learning style?

_____

3. What was the hardest part of the 1B Error Hunter Boss Battle?

_____

PlayIQ Module 2: Digital Smarts & Human Responsibility

Your next unlock: power that still sounds like you

You have turned an imagined character into a set of instructions. Imagine using that same control to make an idea clearer while keeping it unmistakably yours. Which matters more: a polished answer you cannot explain, or an idea you can improve, defend, and turn into something useful?

ORION: "The creator chooses the direction. Today, you keep hold of the controls while the tool helps you go further."

Your route - checkpoints inside this one module:

1. Choose your boundaries: Parts 0-2, power and school policy.
2. Try the controls: Parts 3-5, voice, verification, and focus experiments.
3. Keep what worked: Parts 6-9 and the Tutor checkpoint, one approved record.

Keep going between checkpoints if you are ready. If you pause, mark the Part, your next step, and your existing Tutor Project name in these course notes. These checkpoints do not add another assignment or require a later visit.

Know what you are building

A Project is a place an AI platform may provide to group related chats, instructions, and sources. Project Instructions tell the AI how to act: for example, ask for my attempt before giving a hint. A Knowledge File holds reference information it may need: for example, an approved learning record or a checked set of notes. The instruction tells it how to use the reference; the file supplies the reference.

Your character card is a small example of reusable reference information. Pasting it into a request does not secretly install permanent instructions. Use the Tutor Project started in Module 00 for the learning records throughout this course. Formal Study Pack creation arrives in Module 7. For now, use the existing module checkpoint and approve one compact update, rather than making a separate empty file every time you see a template.

Your mission: use power without giving away control

Artificial intelligence is an amplifier. Whatever you feed into it, it multiplies.

Curious questions and specific instructions can make AI useful for practising, explaining, and planning. If it does the whole task for you, however, you may lose the chance to build the skill yourself. The result depends on the task, the tool, the checking, and what you actually practise.

Power is not cheating. Power is knowing how to stay in control.

The real competitive advantage in the modern world is not escaping the work. It is learning how to master the work sooner, in a format that makes sense to your brain, so you can build real things that matter.

By the end of this module, I can:

- Master the Power Tool Principle and separate high-leverage coaching from cheating;
- Navigate real-world school AI policies using the 5-Step Policy Check;
- Protect my authentic human voice using the Coaching-Over-Rewrite Technique;
- Deploy the PlayIQ Truth Filter to spot deepfakes, synthetic misinformation, and unverified AI claims;
- Complete the Focus Without Overwhelm Lab to calibrate my optimal deep-work sprint length (5, 10, or 15 minutes);
- Stage Rule 2 (`voice-preservation` & `focus-block`) in my personal Learning Supercharger Blueprint;
- Pass the Ethical Dilemma Boss Battle and submit my Digital Power Card.

Estimated completion time: 45 to 60 minutes.

Part 0 - Lightning Hook: The Power Paradox

Time: 30 to 60 seconds

Consider two high school students faced with a tough research paper:

```
┌──────────────────────────────────────────────────────────────────────┐
│ STUDENT A:                                                           │
│ Feeds the essay prompt to AI: "Write a 500-word essay for me."       │
│ Copies the output, tweaks three words, submits it, and plays games.  │
├──────────────────────────────────────────────────────────────────────┤
│ STUDENT B:                                                           │
│ Outlines 3 core arguments, then prompts AI: "Here is my outline.     │
│ What is the weakest point in my logic, and what counter-argument     │
│ would a tough professor raise?" Revises the draft in their own words.│
└──────────────────────────────────────────────────────────────────────┘
```

Both students used AI. Both turned in an assignment on time.

Which student is building real power, and which student is becoming dependent?

_____

What happens to Student A on the day of a proctored in-class exam or a college interview?

_____

> *ORION SAYS: "Student A borrowed intelligence; Student B built it. When you borrow intelligence, you pay exorbitant interest later in self-doubt and helplessness. When you build intelligence, the leverage stays in your brain forever. Today, you learn how to hold the power tool without getting cut."*

Part 1 - Node 1: The Power Tool Principle

Think about a circular power saw. A master carpenter uses that saw to build a magnificent dining table in a single afternoon-work that once took days with a hand saw.

Does the power saw replace the carpenter's vision? No. Does it replace their measurement of the wood? No. If the carpenter closes their eyes and pushes blindly, the saw doesn't make furniture-it cuts off their fingers.

The Golden Law of Technology: AI multiplies the direction you give it.

```
╔══════════════════════════════════════════════════════════════════════╗
║                    COACH USE vs. CRUTCH USE                          ║
╠══════════════════════════════════════════════════════════════════════╣
║ AI AS A COACH (HIGH LEVERAGE):        AI AS A CRUTCH (DEPENDENCE):   ║
║ □ Explains concepts from fresh angles □ Produces work you claim is you║
║ □ Tests you with retrieval questions  □ Replaces hard thinking       ║
║ □ Challenges logical weak points      □ Hides what you don't know    ║
║ □ Helps structure complex plans       □ Decides your opinions for you ║
║ □ Gives hints after your attempt      □ Blurs the line on plagiarism ║
╚══════════════════════════════════════════════════════════════════════╝
```

The Gray Zone

Not every situation is black and white. Some tasks live in a gray zone:

- Brainstorming ideas for a science fair project: Allowed in almost every school.
- Grammar and spell checking on a final essay draft: Usually allowed, unless the class is testing spelling.
- Having AI generate the outline: Allowed in some classes, banned in others.

When you enter a gray zone, the rule is simple: Pause, check the policy, and disclose.

Activity 1: Coach, Crutch, or Gray Zone?

Label each scenario below as Coach, Crutch, or Gray Zone:

1. "Hey Orion, I solved this math problem and got x = 7. The answer key says x = 12. Don't tell me the answer-tell me which algebraic step likely had the sign error."

Classification: [Coach | Crutch | Gray Zone] - Why: _____

2. "Write a persuasive conclusion paragraph about climate change for my biology paper."

Classification: [Coach | Crutch | Gray Zone] - Why: _____

3. "I wrote this thesis statement. Can you give me three reasons someone might disagree with it?"

Classification: [Coach | Crutch | Gray Zone] - Why: _____

4. "Rewrite my history paragraph to make it sound like a college professor wrote it."

Classification: [Coach | Crutch | Gray Zone] - Why: _____

5. "Translate this Spanish paragraph into English so I can read it, then quiz me on the vocabulary words."

Classification: [Coach | Crutch | Gray Zone] - Why: _____

Part 2 - Node 2: Know the Policy Before Using the Power

There is no single global rule for AI in school. One teacher might embrace AI as a brainstorming partner. Another teacher might have a strict zero-AI policy and use automated tools to scan your work.

If you use AI without knowing the rules, you risk academic penalties, lost credit, and damaged trust.

The 5 Policy Check Questions

Before you open an AI tool for any school assignment, verify these five answers:

```
┌──────────────────────────────────────────────────────────────┐
│                  THE 5-POINT POLICY CHECKLIST                │
├──────────────────────────────────────────────────────────────┤
│ 1. Is AI permitted on this specific assignment?              │
│ 2. If permitted, which exact uses are allowed (brainstorming/grammar)? │
│ 3. What parts of the work must be 100% human-created?        │
│ 4. Does the teacher require an AI disclosure or citation statement?  │
│ 5. If the syllabus is vague, have I asked the teacher for clarity?   │
└──────────────────────────────────────────────────────────────┘
```

The Transparent Disclosure Formula

If your school allows AI assistance with disclosure, never hide it. Use this clean, professional formula:

> *PLAYIQ TRANSPARENCY DECLARATION: "I used [AI Tool Name, e.g. Claude / ChatGPT / Gemini] as a learning coach to [brainstorm ideas / test counter-arguments / quiz my understanding]. All final drafting, arguments, calculations, and written sentences were produced and verified by me."*

Practice Exercise: Write your own disclosure statement for an assignment where you used AI to brainstorm 5 potential debate topics:

_____

_____

Part 3 - Node 3: Keep Your Own Voice

Your voice is your most valuable intellectual asset. It is composed of your personal cadence, your humor, your unique real-world analogies, your vocabulary, and your perspective on the world.

When you ask an AI to "rewrite my paragraph to make it sound professional", it strips away your humanity and replaces it with synthetic sludge: words like "furthermore", "tapestry", "paramount", and "delve".

Furthermore, AI detection tools are notoriously erratic. They generate false positives on authentic student writing and can fail on polished AI text. The only bulletproof defense is an undeniable paper trail: your brainstorm notes, your rough outlines, and the ability to explain every single sentence aloud in your own words.

Activity 3: The Voice Preservation Experiment

Write a quick 4-sentence paragraph explaining your favorite hobby, sport, or game:

Character connection, inside this same activity: you may describe the character you built in Module 1 instead. Make one sentence its original motto, in words you chose. Run the same two tests below on that paragraph. After coaching, put your own final motto on the existing Character Guardrail Card or beside the paragraph. This is the character's new voice detail, not a new image task or another proof submission. A fun motto does not establish a learning preference; your actual comparison results are the learning evidence.

My Original Paragraph:

_____

_____

_____

_____

Now, open your PlayIQ Tutor Project and run two competing tests:

Round A: The Rewrite Request (The Bad Way) Enter this prompt:

> *"Rewrite this paragraph to sound sophisticated and academic: [paste your paragraph]"*

Read the output. How does it sound?

- Does it sound like you? [Yes | Somewhat | Totally Robotic]
- Could you explain every vocabulary word used to your teacher on the spot? [Yes | No]

Round B: The Coaching Request (The PlayIQ Way) Start a new chat and enter this prompt:

> *"Do not rewrite my paragraph. Read my sentences below. Point out the single weakest sentence, explain why it feels vague, and ask me one question that will help me revise it myself: [paste your paragraph]"*

Read the output. Notice the difference:

- Which version kept your authentic personality? [Round A | Round B]
- Which version forced your brain to level up? [Round A | Round B]

Write down the revised sentence you wrote yourself after reading the coaching feedback:

_____

_____

Part 4 - Node 4: The Truth Filter & Pause Before Share

We live in an era where photorealistic fake images, synthetic voice clones, and hallucinated academic citations can be generated in seconds.

Confidence is not evidence. A polished design is not proof. An articulate AI voice is not fact.

```
┌──────────────────────────────────────────────────────────────┐
│                    THE PLAYIQ TRUTH FILTER                   │
├──────────────────────────────────────────────────────────────┤
│ 1. What is the exact factual claim being made?               │
│ 2. What verifiable primary evidence supports it?             │
│ 3. Can I cross-check this with an independent, trusted source?│
│ 4. Is emotional language or sensational framing being used?  │
│ 5. What could go wrong if I believe this or share it without checking?│
└──────────────────────────────────────────────────────────────┘
```

The "Pause Before Share" Protocol

Before you forward a viral video, post a screenshot, or repeat an AI claim to your friends or family, run the Triple-P Check:

1. Plausibility: Does this sound too crazy or too convenient to be true?
2. Permission: Do I have consent to share this person's likeness or words?
3. Purpose: Am I sharing this to inform, or am I reacting to outrage and drama?

Real-World Scenario: A classmate texts you an AI-generated image depicting your school principal dancing in an embarrassing costume at a party. The text says: "Post this on Instagram, everyone is doing it!"

What is your immediate move, and why?

_____

_____

Part 5 - Node 5: Learn How You Learn Lab: Focus Without Overwhelm

Modern digital environments are engineered by trillion-dollar algorithms to fracture your attention. When you sit down to study with AI, the temptation to open 14 tabs, check Discord, or scroll social media is intense.

This lab is not a test of moral willpower. It is an engineering calibration of your attention endurance.

You are going to test three different Focus Block Sprint Lengths on a real school task to find your brain's current peak performance window.

Focus Protocol Setup:

- Silence phone notifications and place your phone across the room.
- Close all browser tabs except your course material and your PlayIQ AI workspace.
- Have a timer ready.

Sprint 1: The 5-Minute Micro-Sprint

Set a timer for 5 minutes. Pick one specific math problem or reading passage. Work continuously until the chime sounds.

- Focus Quality (1 poor to 5 laser-focused): _____ / 5
- Urge to check notifications (1 zero urge to 5 intense craving): _____ / 5
- Was 5 minutes too short, just right, or too long? _____

Take a 2-minute physical reset (stand up, stretch, drink water).

Sprint 2: The 10-Minute Power Sprint

Set a timer for 10 minutes. Continue the same school task.

- Focus Quality (1 to 5): _____ / 5
- Total productive work completed: _____
- Around what minute did your mind first start to wander? Minute _____

Take a 3-minute physical reset.

Sprint 3: The 15-Minute Deep Sprint

Set a timer for 15 minutes. Dive into the hardest part of the assignment.

- Focus Quality (1 to 5): _____ / 5
- Did you enter a state of flow, or did you hit mental fatigue? _____
- Urge to task-switch (1 to 5): _____ / 5

Lab Synthesis:

1. Which sprint length felt most productive without triggering mental exhaustion?

[5 Minutes | 10 Minutes | 15 Minutes]

2. What physical reset worked best between blocks (water, stretching, deep breathing, pushups)?

_____

3. What environmental distraction broke your focus first?

_____

Part 6 - Node 6: Learning Supercharger Blueprint Update

You now have two useful pieces of evidence to review: your authorship boundary and what you noticed during the focus-sprint activity.

Now, propose Rule 2 for the same Tutor Project you started in Module 00. Keep the voice-protection boundary separate from your measured focus preference: the boundary protects your authorship, while the best sprint length is a personal setting that can be retested.

```
module: 2
setting_id: "voice-preservation-and-pacing"
focus_block_setting: "[CHOOSE: 5 | 10 | 15] minutes"
coaching_boundary: "Feedback and scaffolding only; strictly forbid ghostwriting or rewriting"
pacing_rule: "Limit AI response length to 3 paragraphs max to prevent cognitive overwhelm"
integrity_mandate: "Require student to draft and explain all final submissions"
evidence_type: "student_reported_and_experiment_result"
rule_status: "proposed_pending_student_approval"
confidence_level: "pending_validation"
review_checkpoint: "Module 4 (Lesson Rescue Integration)"
```

Write Your Blueprint Rules in Plain English:

> *"1. Orion must never rewrite my text; it must point out weaknesses and ask me guiding questions so I can rewrite it myself. 2. Orion must structure our study sessions in focused sprints of _____ minutes, followed by a check-in."*

Part 7 - Course Learning Record Update

Add this dated record to the `Course Learning Record` in your same Tutor Project. Keep only the focus length and wording that match your actual results:

```
# MODULE 2 CALIBRATION RECORD
module_2:
  record_status: "module_assessment"
  calibrated_focus_block_minutes: [5 | 10 | 15]
  voice_protection_policy: "coaching_over_rewriting"
  truth_filter_protocol_active: true
  academic_integrity_declaration_signed: true
  staged_tutor_rules:
    - "voice-preservation"
    - "session-pacing-boundary"
  rule_status: "proposed_pending_student_approval"
  review_condition: "Retest focus length in another study session"
```

Part 8 - Proof Artifact: The Digital Power Card

Fill out this card and screenshot it as your verifiable proof of Module 2 completion:

```
╔═══════════════════════════════════════════════════════════════════╗
║                    PLAYIQ DIGITAL POWER CARD                      ║
╠═══════════════════════════════════════════════════════════════════╣
║  Student Handle:  _____________________________________________   ║
║  Calibrated Focus Sprint: [ 5 Min | 10 Min | 15 Min ]             ║

║                                                                   ║
║  My Personal Integrity Pledge:                                    ║
║  "I will use AI to expand my capabilities, never to bypass my own mind.  ║
║   My voice, my arguments, and my growth remain entirely my own."  ║
║                                                                   ║
║  Student Signature: _____________________________ Date: _________ ║
╚═══════════════════════════════════════════════════════════════════╝
```

Part 9 - Mastery Challenge: The Highest Path Boss Battle

To unlock Module 3: Pre-Learn System, you must resolve the Highest Path Dilemma.

The Scenario:

It is 10:30 PM on a Sunday night. You have a 3-page history paper due at 8:00 AM tomorrow. You are exhausted, stressed, and only have 1 page written.

A classmate sends you a prompt template: "Just paste this into ChatGPT. It writes the other 2 pages with fake footnotes and passes the detector. Everyone in class does it."

Your Mission:

Open your PlayIQ Tutor Project and prompt Orion:

> *"Orion, I am facing a late-night deadline emergency. Here is the scenario: [paste the situation above]. What is the Highest Path action plan that allows me to complete this assignment ethically, protect my voice, and learn the material in the next 60 minutes?"*

Read Orion's coaching plan, and write your 3-Point Emergency Action Plan below:

1. Immediate triage step: _____
2. How AI is used as a coach tonight (not a ghostwriter): _____
3. What you will tell your teacher if you need an extension: _____

Final Transmission from Orion

> *"You have chosen the Highest Path. Anyone can press a button and surrender their mind to a machine. Very few know how to wield modern intelligence with discipline, integrity, and command. You are building the habits that will make you dangerous in the best possible way. Next up: Module 3 - The Pre-Learn System. You are going to learn how to walk into tomorrow's classroom already knowing the hardest concept before the teacher even opens their mouth. Module 2 is officially MASTERED."*

Tutor Project checkpoint - add your Module 2 evidence

Return to the same PlayIQ Tutor Project. Tell Orion:

> *Record my Module 2 assessment using my PlayIQ course-recordkeeping rules. Separate my authorship/integrity boundary from my focus-sprint experiment. Use only my actual results. Show the dated Course Learning Record entry and any proposed Learning Rule; label untested preferences as* `pending_validation`*. Wait for my approval.*

Paste your completed activity results, review the proposed record, and approve only what you want kept in your Tutor Project.

Beta Tester Feedback (Beta Route Only)

1. Did the Focus Lab help you identify your real attention limit?

_____

2. Was the Voice Preservation Experiment convincing on why AI rewrites sound fake?

_____

3. What is one rule about AI you wish your school would clarify?

_____

PlayIQ Module 3: The Pre-Learn System

Your next unlock: a map before the adventure

Imagine entering a huge game world with the map already unlocked. You still get to explore, but you can spot the landmarks and choose your next move. What would tomorrow's class feel like if the biggest ideas already looked familiar? Your creation in this module is that starting map.

Your route - keep one learning topic throughout:

1. Find the landmarks: Parts 0-2.
2. Test your way in: Parts 3-5, using the same topic and Pre-Learn Brief.
3. Prove and keep it: Parts 6-9 and the Tutor checkpoint.

These are progress markers inside one module. If you pause, write the Part, topic, and next unfinished step beside your existing brief; resume with it.

Your mission: make tomorrow's lesson feel familiar today

Have you ever walked into class, sat down, and within five minutes felt completely overwhelmed because the teacher was throwing out terms, diagrams, and formulas you've never seen before?

Your brain freezes. You scramble to copy down notes you don't understand. You leave class feeling behind before you even started.

Here is the secret top performers know: they don't try to learn everything during the lecture.

They use a Pre-Learn System.

Pre-learning is not doing tomorrow's homework in advance. It is not spending two hours reading a boring textbook chapter line-by-line.

Pre-learning is giving your brain a rough map before you enter the territory. When you already know the main landmarks, the five key words, and the one question to listen for, your brain stops panicking and starts connecting dots. You walk into class confident, calm, and two steps ahead.

By the end of this module, you will be able to:

- transform any complex, intimidating school topic into a clean, 5-part mental map in under 10 minutes;
- extract the "First Principle" (the core idea that makes all the details make sense);
- run the Learn How You Learn Lab to discover whether your brain prefers Map-First, Example-First, or Question-First entry;
- use Non-Examples to establish razor-sharp conceptual boundaries;
- build and test a 10-line Pre-Learn Brief;
- stage Rule 3 (`pre-learn-sequence`) into your personal AI Tutor blueprint;
- defeat the Pre-Learn Pioneer Boss Battle to earn your Module 3 badge.

Estimated time: 45 to 60 minutes.

Part 0: Lightning Hook - Choose Your Arrival Style

Time: 60 seconds

Imagine you are dropped into a massive open-world video game or a theme park the size of a city. You have three ways to prepare before stepping through the gate:

- Option A (The Atlas Guide): You study a top-down aerial map showing the 5 major zones and how they connect. You don't know what every shop sells, but you know where the mountains, rivers, and castles are.
- Option B (The Gameplay Trailer): You watch a 30-second clip of an intense boss battle in action. Seeing real combat immediately shows you what the game feels like and how the mechanics work.
- Option C (The Quest Log): You are given one intriguing mystery: "Why does the castle gate only open during an eclipse?" You enter looking specifically for that one clue.

Which one makes your brain feel most ready to explore?

My choice: [Option A | Option B | Option C]

Why did that choice appeal to you?

There is no "wrong" choice.

- Option A represents Map-First learning (big-picture structure first).
- Option B represents Example-First learning (concrete action first).
- Option C represents Question-First learning (curiosity hook first).

In today's lab, you will run a live head-to-head trial with Orion to compare which entry method felt clearest and least overwhelming for this topic. The result is a starting point to retest, not a permanent label.

Part 1: Why Pre-Learning Destroys Classroom Overwhelm

Cognitive Load and Working Memory

Your brain's working memory can only hold about 4 to 7 new pieces of information at once. When a teacher introduces 15 new terms, 3 formulas, and a historical timeline all in 45 minutes, your working memory crashes like a computer trying to run 50 apps at once. Psychologists call this cognitive overload.

```
WITHOUT PRE-LEARNING:
Teacher speaks ---> 15 new terms hit your brain at once ---> Buffer overflow ---> Overwhelm & zoned
  out

WITH PRE-LEARNING:
5-min Pre-Learn Map ---> 5 landmarks already saved in long-term memory ---> Teacher speaks ---> New
  details easily snap into place!
```

The 5-Part Map

A high-speed Pre-Learn Map does not summarize every paragraph. It answers exactly five questions:

1. The Headline: What is the overarching topic in one sentence?
2. The 5 Landmarks: What are the 4 to 5 main parts or phases?
3. The Power Vocabulary: Which 3 to 5 critical terms will the teacher repeat most?
4. The Anchor Example: What is one real-world, everyday example that illustrates the concept?
5. The Golden Question: What is the single most interesting question to listen for in class?

Real-World Models Across Three Subjects

Look at how a 5-Part Map simplifies three notoriously difficult subjects:

Model 1: Biology - Cellular Respiration

- Headline: How living cells break down glucose (food) to create usable energy (ATP).
- 5 Landmarks:

1. Glycolysis (splitting sugar in the cytoplasm)
2. Krebs Cycle (spinning carbon rings inside the mitochondria)
3. Electron Transport Chain (the cellular power generator)
4. ATP (the energy battery produced)
5. Byproducts (carbon dioxide and water)

- Power Vocabulary: Glucose, ATP, Mitochondria, Aerobic, Byproduct.
- Anchor Example: Why your leg muscles burn during a sprint (when oxygen runs low, cells switch to lactic acid fermentation).
- Golden Question: "Where exactly inside the mitochondria is the majority of ATP created?"

Model 2: World History - Causes of World War I

- Headline: How decades of competing treaties, empires, and military buildups exploded into a global war after a single assassination.
- 5 Landmarks:
1. Militarism (arms race between navies and armies)
2. Alliances (secret defense pacts that dragged countries in like dominoes)
3. Imperialism (fights over colonies in Africa and Asia)
4. Nationalism (intense ethnic pride and desire for self-rule)
5. The Spark (the assassination of Archduke Franz Ferdinand in Sarajevo)
- Power Vocabulary: Alliance, Mobilization, Deterrence, Sovereignty, Domino Effect.
- Anchor Example: Two rival friend groups in a school hallway where a conflict between two people suddenly pulls 30 people into a fight because of pacts.
- Golden Question: "Why did the alliances force countries to declare war even when their leaders didn't want to fight?"

Model 3: Algebra II - Logarithms

- Headline: The mathematical inverse of exponents-asking "what power do I need to reach this number?"
- 5 Landmarks:
1. Base (the number being multiplied)
2. Exponent/Power (how many times it multiplies)
3. Result/Argument (the final total)
4. Common Log (base 10)
5. Natural Log ($\ln$, base e)
- Power Vocabulary: Base, Exponent, Inverse, Argument, Logarithmic Scale.
- Anchor Example: The Richter scale for earthquakes (a magnitude 7 earthquake isn't 1 point stronger than a 6; it's 10 times stronger).
- Golden Question: "Why can you never take the logarithm of a negative number?"

Part 2: The Orion Map Protocol

Let's test generating a high-impact Pre-Learn Map using Orion (or your frontier AI workspace).

The Pre-Learn Prompt Template

Copy and adapt this exact prompt:

```
Act as my PlayIQ learning coach. I am about to learn [INSERT UPCOMING TOPIC] in my [SUBJECT] class.

Do not give me a long lecture, full chapter summary, or practice problems yet.
Give me a high-speed 5-Part Pre-Learn Map:
1. One-sentence Headline (plain English, no jargon).
2. The 5 Major Landmarks (bullet points).
3. The 5 Essential Vocabulary Words with 6-word plain definitions.
4. One relatable, real-world Anchor Example.
5. One intriguing Golden Question I should listen for in class.

Label any uncertainty and ask what grade level I need.
```

Try It Live: Your Pre-Learn Map

Pick an actual topic from one of your classes this week (or an upcoming topic you dread):

My Topic: _____ Class/Subject: _____

Paste Orion's response and extract your map:

1. Headline: _____

2. 5 Landmarks:

- Landmark 1: _____

- Landmark 2: _____
- Landmark 3: _____
- Landmark 4: _____
- Landmark 5: _____

3. 5 Essential Vocabulary Words:

1. _____ : _____
2. _____ : _____
3. _____ : _____
4. _____ : _____
5. _____ : _____

4. Anchor Example: _____

5. My Golden Question for Class:

_____

Part 3: Learn How You Learn Lab - The 3-Way Entry Trial

Now comes the scientific experiment. We want to discover how your brain naturally processes unfamiliar conceptual territory.

We will test three distinct pedagogical entry methods on a fresh, moderately challenging topic (e.g., Game Theory & The Prisoner's Dilemma, Plate Tectonics & Subduction Zones, or The Law of Supply & Demand).

Topic Chosen for Lab: _____

Round 1: Map-First Protocol

Open a clean chat thread with Orion and prompt:

> *"Give me a top-down, structural 5-part map of [TOPIC]. Show only the architecture and categories. Do not explain the mechanics or give real-world examples yet."*

Read the response once. Immediately record your initial metrics:

- Initial Clarity (1-5): _____ / 5
- Curiosity Triggered (1-5): _____ / 5
- Feeling of Overwhelm (1-5, where 1 is zero overwhelm, 5 is total panic): _____ / 5
- What mental image formed first? _____

Round 2: Example-First Protocol

Start a fresh chat thread with Orion and prompt:

> *"Do not explain the theory or give me a map of [TOPIC] yet. Instead, give me two vivid, real-world examples in action and one non-example. End by asking me what pattern connects them."*

Read the response once. Immediately record your metrics:

- Initial Clarity (1-5): _____ / 5
- Curiosity Triggered (1-5): _____ / 5
- Feeling of Overwhelm (1-5): _____ / 5
- What pattern did your brain notice? _____

Round 3: Question-First Protocol

Start a third fresh chat thread with Orion and prompt:

> *"Do not explain [TOPIC] yet. Present me with a real-world dilemma or counterintuitive paradox that forces me to make a decision. Ask me what I would do, then explain how [TOPIC] solves that paradox."*

Read the response once and answer the dilemma. Record your metrics:

- Initial Clarity (1-5): _____ / 5
- Curiosity Triggered (1-5): _____ / 5
- Feeling of Overwhelm (1-5): _____ / 5
- Did grappling with the question make you care more about the answer? [Yes | No]

Quantitative Comparison Scorecard

Entry Method	Clarity (1-5)	Curiosity (1-5)	Overwhelm (1-5)	Best Subject Fit
Round 1: Map-First	____	____	____	_____
Round 2: Example-First	____	____	____	_____
Round 3: Question-First	____	____	____	_____

Self-Discovery Analysis

1. Which entry method lowered your feeling of overwhelm the fastest? Why?

_____

2. Which entry method made you genuinely curious rather than just feeling like you were doing schoolwork?

_____

3. Did you notice a difference based on subject? (e.g., Do you prefer Example-First for Math, but Map-First for History?)

_____

Part 4: Non-Examples Reveal the Boundary

One of the biggest traps in learning is false recognition-thinking you understand a concept when you only recognize the label.

The fastest way to test true understanding is by finding the Non-Example.

- An Example shows what a concept is.
- A Non-Example looks almost identical on the surface, but violates one critical rule of the concept.

Seeing where a concept stops working is what builds true expertise.

Model: The Boundary Detective

Concept	True Example	Non-Example (Close Call!)	Why It Fails the Rule (The Boundary)
Direct Democracy	Citizens in ancient Athens voting directly on a proposed law in the assembly.	Citizens in Canada voting for a Member of Parliament to represent them in the House of Commons.	Canada is a Representative Democracy; citizens elect representatives rather than voting directly on the laws themselves.
Chemical Change	An iron nail rusting in moist air to form iron oxide.	Ice melting into liquid water on a warm kitchen counter.	Melting ice is a Physical Change; the water molecules (H_2O) remain chemically identical.
Alliteration	"Peter Piper picked a peck of pickled peppers."	"City life is simple and serene."	Even though 'city', 'simple', and 'serene' start with an 's' sound, alliteration requires the repetition of initial consonant sounds across stressed syllables.

Your Turn: Find the Boundary

Pick one key concept from your current classes.

Concept: _____

Ask Orion:

> *"For [CONCEPT], give me one clear real-world example and one sneaky non-example that looks like an example but isn't. Explain the exact boundary line where it fails."*

- My Example: _____
- My Non-Example: _____
- The Boundary Rule: _____
- Verification Source Checked (Textbook / Class notes / .edu site): _____

Part 5: The 10-Line Pre-Learn Brief

Character connection, inside this same brief: give your Module 1 character a Map Scout mission badge. Write the badge name beside your brief or on your existing character card, then choose the brief's Golden Question as the clue your scout is looking for. Your ten-line brief is still the actual learning output. You do not need to draw, regenerate an image, open another Project, or submit an extra character task.

Before you walk into class tomorrow, you should be able to write your 10-Line Pre-Learn Brief in five minutes flat.

If you get stuck on a line, write [CHECK IN CLASS] instead of making something up. That blank is not a failure-it's an arrow pointing to what you need to pay attention to!

```
================================================================
                  10-LINE PRE-LEARN BRIEF
================================================================
1. UPCOMING TOPIC: _____
2. CORE FIRST PRINCIPLE: _____
3. LANDMARK 1: _____
4. LANDMARK 2: _____
5. LANDMARK 3: _____
6. KEY WORD & MEANING: _____
7. ANCHOR EXAMPLE: _____
8. CLOSE NON-EXAMPLE: _____
9. WHAT STILL CONFUSES ME: _____
10. MY GOLDEN QUESTION FOR CLASS: _____
================================================================
```

The 60-Second Memory Recall Test

Put a piece of paper over your 10-Line Brief.

Without peeking, answer out loud or in writing:

1. What is the core first principle?
2. What is your golden question for class?

Did you remember them? [Yes | Partly | Blanked]

If you blanked, that is totally fine! Look back at your brief for 10 seconds, cover it, and try once more. That small effort of retrieval locks the concept into your long-term memory.

Part 6: Learning Supercharger Blueprint Update - Staging Rule 3

In Module 00, you established your baseline and handshake. In Module 1, you staged Rule 1 (`explanation-start`). In Module 2, you staged Rule 2 (`voice-preservation` & `session-length`).

Now, you are staging Rule 3 (`pre-learn-sequence`).

This rule dictates how your personal AI Tutor will introduce brand-new, complex material whenever you start a study session or ask about an unfamiliar topic.

Rule 3 Specification

Select the setting supported by your Lab evidence:

- [ ] `pre-learn-sequence: map-first` (Always give me the structural 5-part map and categories before diving into examples or details).
- [ ] `pre-learn-sequence: example-first` (Always give me two concrete real-world cases and a non-example before showing theoretical structure).
- [ ] `pre-learn-sequence: question-first` (Always hook me with an intriguing puzzle, dilemma, or question about what I already suspect before explaining).

Why this setting matched your brain's processing:

_____

Orion review condition: Retest this rule whenever switching between STEM (math/physics) and Humanities (literature/history).

Part 7: Course Learning Record - Pre-Learn Experiment

Add this record to the `Course Learning Record` in the same Tutor Project you started in Module 00. Record what happened in class after your pre-learn activity; do not turn a single result into a permanent rule:

```
module: 3
module_name: "The Pre-Learn System"
record_type: "experiment_result"
student_profile_update:
  active_rules:
    - rule_id: "rule-3-pre-learn-sequence"
      setting: "[map-first | example-first | question-first]"
      rationale: "[Explain why this lowered your overwhelm]"
      review_condition: "Retest across STEM vs Humanities"
  lab_data:
    topic_tested: "[Topic tested in Part 3]"
    clarity_score: "[1-5]"
    overwhelm_reduction_score: "[1-5]"
    preferred_entry_mode: "[map-first | example-first | question-first]"
  rule_status: "proposed_pending_student_approval_and_retest"
  mastery_artifacts:
    - artifact_name: "Pre-Learn Mission Card"
      status: "completed"
  verified_by: "student_and_source_check"
```

Part 8: Proof Artifact - Pre-Learn Mission Card

Fill out your official mission card. You can keep this in your binder or phone as proof of preparation:

```
┌──────────────────────────────────────────────────────────────┐
│                    PLAYIQ PRE-LEARN MISSION CARD             │
├──────────────────────────────────────────────────────────────┤

└──────────────────────────────────────────────────────────────┘
```

Part 9: Mastery Challenge - The Pre-Learn Pioneer Boss Battle

To unlock Module 4, complete the Pre-Learn Pioneer Boss Battle:

Mission Briefing

Pick one real class you have tomorrow or later this week.

1. Run a 10-minute Pre-Learn session using your chosen sequence (`map-first`, `example-first`, or `question-first`).
2. Write your 10-Line Pre-Learn Brief.
3. Formulate your Golden Question.

4. The Live Trial: Walk into that class. When the teacher begins teaching, listen actively for your 5 landmarks and your Golden Question. If appropriate, ask your Golden Question or write down the exact moment the teacher answers it!

Post-Mission Debrief (Complete After Class)

- Did hearing the topic in class feel less overwhelming than usual? [Yes | No | Neutral]
- When the teacher mentioned terms you had already seen in your brief, what did that feel like?

_____

- Was your Golden Question answered by the teacher, or did you have to ask?

_____

- Does your staged Rule 3 feel solid, or do you want to adjust it?

[Keep As Is | Retest Next Week]

Tutor Project checkpoint - add your Module 3 evidence

Return to the same PlayIQ Tutor Project. Tell Orion:

> *Record my Module 3 pre-learning assessment using my PlayIQ course-recordkeeping rules. Separate the sequence I chose from what happened in class. Use my actual debrief, show one dated Course Learning Record entry and any proposed rule, and identify what should be retested. Wait for my approval.*

Paste your completed pre-learn card and post-class debrief. Review and approve only the accurate, privacy-safe record.

Beta Tester Feedback - Beta Route Only

Complete this section only if your PlayIQ account is in the beta-testing track:

1. How clear was the difference between Map-First, Example-First, and Question-First? (1-5): _____ / 5
2. Did the Non-Example exercise help you catch any misunderstandings? _____
3. How long did it take you to complete your 10-Line Brief? _____ minutes
4. What was the most fun or surprising part of this module? _____
5. What would make this pre-learn mission even better? _____

PlayIQ Module 4: Lesson Rescue Mode

Your next unlock: find the hidden doorway

Every adventure has a moment when the path disappears. What if that moment could show you the exact skill to unlock next? Today your stuck point becomes a clue. You will find it, try a smaller move, and show what changed.

ORION: "You do not have to defeat the whole mountain. Find the next foothold. Then test whether it holds."

Your route - one rescue, with clear checkpoints:

1. Locate the gap: Parts 0-3.
2. Try and compare help: Parts 4-6.
3. Keep the evidence: Parts 7-10 and the Tutor checkpoint.

Carry the same topic and scan forward. If you pause, mark the exact unclear chunk and the next method to try in your existing rescue notes.

Your mission: find the one missing piece

Have you ever looked at a lesson and thought, "I understand every word, but I still do not understand what this means"?

That feeling does not mean you are bad at the subject. It usually means there is a specific missing piece hiding inside the lesson. In this module, you will learn how to find that piece and ask Orion for the right kind of help.

By the end of this module, I can:

- turn "I do not get it" into a precise diagnosis;
- recognize six common kinds of learning gaps;
- use chunking to locate where confusion begins;
- compare three rescue methods on the same real problem;
- choose a rescue setting for Orion to test, not a permanent label;
- teach back a rescued lesson in my own words;
- add this module's evidence to the same Tutor Project I started in Module 00.

> *ORION: "Confusion is not a dead end. It is a signal. If we can find the exact point where the signal began, we can choose a smaller and smarter next move. Ready to turn confusion into a map?"*

Part 0: The 30-second rescue hook

Read this sentence once:

> *The membrane is selectively permeable, so some substances cross by diffusion while others require transport proteins.*

Do not solve it. Just circle the first place where your understanding becomes less clear:

- [ ] `membrane`
- [ ] `selectively permeable`
- [ ] why some substances cross
- [ ] why transport proteins are needed
- [ ] I know the pieces, but not how the sentence fits together
- [ ] the whole sentence arrived too quickly

There is no wrong choice. You just did the first move of Lesson Rescue Mode: you replaced "all of this is confusing" with "my confusion begins here."

Why this matters: a vague request usually produces a vague explanation. A precise rescue signal gives Orion a much better chance of helping with the actual missing piece.

My first rescue signal was:

Part 1: Confusion is information

When you are stuck, your brain may want to escape, reread everything, or ask for the complete answer. Those reactions are normal, but they do not always repair the problem.

Lesson Rescue Mode follows four moves:

1. Stop at the first unclear point.
2. Name the likely gap.
3. Choose one rescue method.
4. Prove the rescue by explaining or using the idea yourself.

This is not about making every lesson instantly easy. It is about reducing a large confusing problem into the next learnable step.

Orion conversation: from fog to a target

STUDENT: "I do not understand this chapter."

ORION: "Let us make that smaller. Which paragraph is the first one that stops making sense?"

STUDENT: "The second paragraph."

ORION: "Which word, step, or connection inside it is unclear?"

STUDENT: "I know the words, but I do not know why the equation changes on line three."

ORION: "Good diagnosis. That sounds like a possible step gap. I will show only the move between lines two and three, then you will try a similar move."

Notice what happened: Orion did not replace the student's thinking or finish the whole assignment. Orion helped identify the missing step and then returned the work to the student.

Part 2: The six gap types

The same confused feeling can come from different causes. Use these six types as possibilities, not medical diagnoses or permanent traits.

1. Word gap

An important word, symbol, phrase, or instruction is unclear.

Example: You cannot follow a history question because you do not know what `evaluate` means in that question.

Useful Orion request:

> *"In this sentence, explain the word `evaluate` in plain language. Give one example of what it asks me to do and one thing it does not ask me to do."*

2. Background gap

The lesson assumes you already know an earlier idea.

Example: Factoring quadratics feels impossible because multiplying binomials was never fully understood.

Useful Orion request:

> *"Ask me three short questions to find the earlier idea I may be missing. Do not solve the current problem for me."*

3. Step gap

You understand the starting point and maybe the ending, but one move in the middle is missing.

Example: You follow the first two steps in a chemistry calculation and then do not know why the units change.

Useful Orion request:

> *"Show only the missing move between these two lines. Explain why that move is allowed, then give me a similar move to try."*

4. Connection gap

You understand separate facts but not how they influence one another.

Example: You know what supply and demand mean separately, but not why a shortage can affect price.

Useful Orion request:

> *"Connect these two ideas using one cause-and-effect chain and one real-world example. Then ask me to explain the connection back."*

5. Overload gap

Too much information is arriving at once, so you cannot see where to begin.

Example: A page contains seven new terms, two diagrams, and a long explanation.

Useful Orion request:

> *"Break this into no more than three chunks. Tell me which chunk to understand first and hide the later details until I ask for them."*

6. Expectation gap

You may understand the topic but not what the task, teacher, rubric, or question expects you to produce.

Example: You know the novel, but you are unsure whether the assignment asks for a summary, an argument, or evidence-based analysis.

Useful Orion request:

> *"Translate this instruction into a checklist. Do not write the response. Show me what a successful answer must demonstrate."*

Quick gap practice

Match each situation with the gap that seems most likely. More than one answer can be reasonable if you explain your evidence.

1. "I know every vocabulary word, but I cannot tell why event A caused event B." Likely gap: _____ Evidence: _____
2. "The teacher went from line 2 to line 3 and I cannot reproduce the move." Likely gap: _____ Evidence: _____
3. "I studied the topic, but I do not know what `compare and contrast` requires in the final answer." Likely gap: _____ Evidence: _____
4. "The whole page feels like ten things at once." Likely gap: _____ Evidence:

> *ORION: "Your first gap choice is a hypothesis. We test it. If the rescue does not help, we change the hypothesis instead of blaming you."*

Part 3: Chunking-the confusion scanner

Chunking means dividing material into small enough pieces that you can locate the first breakdown.

The line-by-line scan

Use a short, school-approved paragraph or worked example. Do not upload private information or another student's work.

1. Read only the first sentence or step.
2. Mark it:

- `G` = I get it well enough to explain it.
- `M` = maybe; I recognize it but cannot explain it yet.
- `S` = stop; this is where I lose the thread.

3. Continue only until the first `M` or `S`.
4. Underline the exact word, step, or connection causing the uncertainty.
5. Name a possible gap type.

My confusion scan

Character connection, inside this same scan: your character gains one Rescue Signal. Finish this line in the margin or on the existing character card: "When the path gets confusing, I first _____." Fill it with the first move you actually use below, such as naming the unclear word or isolating a missing step. Then run the normal rescue activity. This one line replaces a separate character exercise; no new image, chat, upload, or proof is needed. From Module 5 onward, the course focuses on your learning tools and Tutor. There are no more required character upgrades after this module.

Topic or lesson: _____

Source used: _____

First clear chunk:

_____

First `M` or `S` chunk:

_____

Exact unclear word, step, connection, amount of information, or expectation:

_____

My first gap hypothesis: _____

Why I chose it:

_____

Why this activity matters

If you ask Orion to explain an entire chapter, you may receive another entire chapter. The scan helps you preserve what you already understand and focus energy only where it is needed.

Part 4: Learn How You Learn discovery

Answer from real experience. There are no ideal answers.

1. When confusion starts, what do you usually do first-reread, guess, ask, pause, search, or something else?

_____

2. What makes you more likely to ask for help?

_____

3. What sometimes stops you from asking for help?

_____

4. Think of a recent lesson that finally clicked. What changed-the words, the example, the steps, the connection, the amount shown, or the instructions?

_____

5. When someone gives you the whole answer while you are stuck, what do you gain and what do you lose?

Gain: _____

Lose: _____

6. What should Orion do if its first rescue attempt does not help?

_____

These answers are clues for the tutor you will build later. They are not fixed statements about what your brain can or cannot do.

Part 5: Active comparison-three rescue methods

Now test three methods on the same confusing chunk. Keeping the chunk the same makes the comparison more useful.

Before starting, write what you currently understand in one sentence:

_____

Write the question you still cannot answer:

_____

Method A: Analogy rescue

Prompt:

> *"Act as my learning coach. I am confused about [exact chunk]. My possible gap is [gap type]. Explain only that missing piece with one simple analogy. Tell me where the analogy stops being accurate. Then ask me one check question. Do not complete my assignment."*

One thing the analogy clarified:

_____

One limit or confusing part:

_____

Check question result: [ ] correct [ ] partly correct [ ] not yet

Method B: Step-by-step rescue

Prompt:

> *"Act as my learning coach. I am confused about [exact chunk]. Show the smallest sequence of steps needed to connect what I know to what I am missing. Pause after each step for me to explain it back. Do not finish the school task for me."*

The step where understanding improved:

_____

The step that still needs work:

_____

Check question result: [ ] correct [ ] partly correct [ ] not yet

Method C: Diagnostic-question rescue

Prompt:

> *"Act as my learning coach. Ask me up to three short questions, one at a time, to locate my exact confusion about [chunk]. After my answers, name the likely gap and give one hint. Do not give the final answer."*

The question that exposed the gap:

_____

The hint I used:

_____

Check question result: [ ] correct [ ] partly correct [ ] not yet

Fair comparison check

- [ ] I used the same topic or closely matched material.
- [ ] I attempted an answer after each rescue.

- [ ] I did not ask Orion to complete the assignment.
- [ ] I recorded what happened, even if no method fully worked.

Part 6: Evidence capture and interpretation

Use your own ratings. They are evidence from this one experiment, not official performance metrics.

Rescue method	Understanding before (1-5)	Understanding after (1-5)	Frustration after (1-5)	Hints needed	Could I explain it?
Analogy	___	___	___	___	Yes / Partly / Not yet
Steps	___	___	___	___	Yes / Partly / Not yet
Questions	___	___	___	___	Yes / Partly / Not yet

Which method produced the clearest improvement in this experiment?

_____

What evidence supports that answer?

_____

Did another method help in a different way?

_____

What might have affected the result-topic difficulty, prior knowledge, prompt quality, tiredness, time pressure, or something else?

_____

Interpret without labeling yourself

Do not conclude, "I am an analogy learner" or "I can only learn through steps." A safer conclusion is:

> *"For this topic, under these conditions, _____ helped because _____. I will let Orion try it first next time and test whether it still helps."*

My evidence-based conclusion:

_____

Part 7: Learning Supercharger Blueprint update

Your Learning Supercharger Blueprint tells your future tutor how to begin a test, not how it must teach you forever.

Think of it like choosing Orion's first move:

- If the move helps, keep using it where it works.
- If another move works better, revise the setting.
- If the topic changes, test again.
- If you still feel stuck, Orion should diagnose another gap instead of

repeating the same explanation louder or longer.

Proposed tutor setting

`rescue-start` = [analogy | step-by-step | diagnostic-questions | not-yet-known]

`when-to-use` = _____

`evidence` = _____

`fallback` = _____

Write the rule in plain language:

> *"When I say I am stuck, first help me locate the exact gap. For this kind of topic, begin with _____. If I cannot explain the idea after the check question, try _____ next."*

Is this rule ready to use?

- [ ] `experiment_result` - supported by today's comparison
- [ ] `student_reported` - I prefer it, but need more testing
- [ ] `pending_validation` - the result was unclear

Part 8: Structured Knowledge File update

Add this record to the `Course Learning Record` in the same Tutor Project you started in Module 00. Replace the brackets with your actual evidence. A single rescue activity is a useful test, not proof that one method always works.

```
- rule_id: module_4_rescue_start
  module: 4
  skill_tested: lesson_rescue
  date: "[YYYY-MM-DD]"
  source_activity: "analogy_vs_steps_vs_questions_comparison"
  confusing_topic: "[topic]"
  gap_hypothesis: "[word|background|step|connection|overload|expectation]"
  preferred_first_move: "[method or not_yet_known]"
  evidence:
    understanding_change: "[what changed]"
    frustration_observation: "[what happened]"
    hints_needed: "[number or unknown]"
    teach_back_result: "[yes|partly|not_yet]"
  provenance: "[experiment_result|student_reported|pending_validation]"
  confidence: "[low|medium|high]"
  fallback_method: "[method or pending_validation]"
  privacy: "safe_for_tutor_project"
  review_condition: "Retest with a different subject or when the rule stops helping."
```

Show Orion what changed:

> *"Orion, read my Module 4 record back to me. Separate what the experiment showed from what I only reported. Do not turn one result into a permanent learning-style label. Tell me which field still needs validation."*

One field Orion said needs more evidence:

_____

Part 9: Proof Artifact-Lesson Rescue Report

Complete this in your own words.

```
================================================================
                  PLAYIQ LESSON RESCUE REPORT
================================================================
Student: _____________________  Date: _____________________
Lesson/topic: ________________________________________________
Source used: _________________________________________________

The exact point where confusion began:
_____________________________________________________________

My first gap hypothesis:
[ word | background | step | connection | overload | expectation ]

Evidence for that hypothesis:
_____________________________________________________________

Methods tested: [ analogy ] [ steps ] [ diagnostic questions ]

The first method Orion should test next time: _________________
Why: _________________________________________________________
Fallback method: _____________________________________________

Before the rescue, I thought:
_____________________________________________________________

After the rescue, I can now explain:
_____________________________________________________________

Rule status:
[ experiment_result | student_reported | pending_validation ]
================================================================
```

Save this artifact for your final personal tutor Project. It gives Orion both a possible rescue rule and the evidence behind it.

Part 10: Mastery Challenge-rescue a real lesson

Choose one small section from current, school-approved material. Your goal is not to finish the whole assignment. Your goal is to prove that you can repair one real gap.

1. Run the line-by-line confusion scan.
2. Name a gap hypothesis.
3. Ask Orion for your proposed first rescue method.
4. Attempt a new example or explanation yourself.
5. If the first rescue fails, test the fallback.
6. Complete the teach-back below without copying Orion's wording.

Teach-back record

The section is about:

_____

The exact gap was:

_____

The missing piece was:

_____

Here is the idea in my own words:

_____

_____

One example is:

_____

One check question I can answer now is:

_____

My answer:

_____

I still need to verify or practice:

_____

Mastery check

- [ ] I located a specific gap instead of saying everything was confusing.
- [ ] I asked Orion for teaching help, not a completed answer.
- [ ] I tried the idea myself after the rescue.
- [ ] I explained what changed in my own words.
- [ ] I saved the proof artifact and knowledge-file record.

If one box is not checked, that is your next step-not a failure.

> *ORION: "You just learned how to turn overwhelm into a target. In Module 5, you will go the other direction: take a large topic you understand in pieces and compress it into a small, accurate map you can actually use."*

Tutor Project checkpoint - add your Module 4 evidence

Return to the same PlayIQ Tutor Project. Tell Orion:

> *Record my Module 4 lesson-rescue assessment using my PlayIQ course-recordkeeping rules. Separate the gap I identified from the rescue move that seemed helpful. Use only my actual evidence, show one dated Course Learning Record entry and any proposed rule, and mark it for retest on another topic. Wait for my approval.*

Paste your rescue report and review the proposed entry. Approve only what is accurate and safe to keep.

Beta tester feedback-complete only in the beta route

This section appears only after the module is complete in the beta-testing route. Standard-course students do not complete it.

1. Which rescue activity felt most useful, and why?

_____

2. Where were the instructions unclear, slow, or boring?

_____

3. Did the six gap types make confusion easier to describe? Which one needs a better example?

_____

4. Did Orion help you think, or did any prompt make it too easy to avoid the thinking?

_____

5. What would make Lesson Rescue Mode more fun without making it less useful?

_____

PlayIQ Module 5: Compression Learning

Your next unlock: carry a whole idea in one clear map

Imagine taking a crowded page and finding the few connections that make it click. What could you build or learn if you could get to that useful core more quickly? Your next creation is an Understanding Card you can actually use, explain, and test. The character work is complete; this is your next practical tool for the Tutor Project you already started.

Your route: Parts 0-3 find the core; Parts 4-7 build and test the card; Parts 8-11 and the Tutor checkpoint retain what the evidence supports. Keep the same topic and card. If you pause, mark the next Part in these notes.

Your mission: make a big idea small without breaking it

Imagine being able to look at a crowded chapter, a long video, or a page of notes and pull out the few ideas that actually hold everything together.

That is compression. It is not shrinking words just to make a shorter page. It is building a clear mental map that keeps the truth, removes clutter, and helps you remember what matters.

By the end of this module, I can:

- separate a topic's core idea from its supporting details;
- simplify an explanation without making it inaccurate;
- explain one idea in three useful ways;
- build a one-page Understanding Card;
- compare audio review, a visual card, and teach-back fairly;
- choose a memory-review setting for Orion to test;
- create evidence and add a record to the same Tutor Project I started in Module 00.

> *ORION: "A powerful question is not always longer. Sometimes it removes everything that does not matter yet. Today, you will learn how to fold a big topic into a map small enough to carry-and accurate enough to trust."*

Part 0: The 45-second compression hook

Your friend missed a lesson called Why We Have Seasons and texts:

> *"I have 30 seconds. What is the one idea I need first?"*

Choose the strongest first reply:

- [ ] "Earth has weather, temperatures, months, hemispheres, an orbit, an axis, sunlight, and different seasons."
- [ ] "Seasons mainly happen because Earth's tilted axis changes the angle and length of sunlight each hemisphere receives during the year."
- [ ] "Summer is hot and winter is cold."

My quick choice: _____

Why it works better than the other two:

_____

The first answer has too many loose details. The third is short but does not explain the cause. The second is compressed: it is smaller than the full lesson but keeps the central relationship.

That is today's challenge-short enough to use, accurate enough to trust.

Part 1: Compression is not deletion

A useful compression answers three questions:

1. What is the central idea?

2. Which details are necessary to understand it?
3. What would become false or misleading if removed?

Weak compression

> *"Photosynthesis is plants eating sunlight."*

It is memorable, but it is inaccurate. Plants do not eat sunlight. The phrase also removes water, carbon dioxide, and the creation of sugar.

Safer compression

> *"Photosynthesis is how plants use light energy, water, and carbon dioxide to make sugar, releasing oxygen as part of the process."*

This version is still simple, but it preserves the major ingredients, action, and result.

Orion's truth check

STUDENT: "Can you make this as short as possible?"

ORION: "I can make it shorter, but first tell me what you need it for. A one-line preview, a test explanation, and a lab report require different levels of detail."

STUDENT: "I need a first map before studying the chapter."

ORION: "Then I will give you the core idea, three necessary parts, and one warning about what the short version leaves out."

Why this matters: the purpose controls how much detail is safe to remove.

My compression purpose

Choose one real topic from school or a parent-approved learning source.

Topic: _____

Source: _____

I need the compression for:

- [ ] a first preview
- [ ] a study review
- [ ] explaining it to someone else
- [ ] preparing for a question or assignment
- [ ] another purpose: _____

What must remain accurate for that purpose?

_____

Part 2: Build the compression ladder

The Compression Ladder turns one large topic into four increasingly useful levels.

Level 1: The topic in one question

What is the main question this topic answers?

Example: "How do plants turn light energy into stored chemical energy?"

My topic's main question:

_____

Level 2: The one-sentence core

Answer the question in one accurate sentence. Do not try to include everything.

My one-sentence core:

_____

Level 3: The three supporting pillars

Choose the three details someone needs before the core idea makes sense.

1. _____
2. _____
3. _____

Level 4: The accuracy guardrail

Write one warning about what your short explanation leaves out or could make someone misunderstand.

Example: "This summary leaves out the detailed chemical stages and should not be used as the complete explanation of photosynthesis."

My accuracy guardrail:

_____

Why this activity matters

The ladder lets you make a topic smaller while leaving a path back to the full source. Your future tutor should never confuse a quick map with complete knowledge.

Part 3: The 3-Ways Rule

Understanding becomes stronger when you can move an idea between forms. Use the same core idea in three ways.

Way 1: Big-picture explanation

State what the whole idea does and why it matters.

Example:

> *"Supply and demand describes how the amount people want and the amount available can influence price and quantity in a market."*

My big-picture explanation:

_____

_____

Way 2: Step-by-step explanation

Show the sequence or cause-and-effect chain.

Example:

> *"A popular item becomes scarce. More buyers compete for fewer items. Sellers can raise the price. The higher price may reduce demand or encourage more supply."*

My step-by-step explanation:

1. _____
2. _____
3. _____
4. _____

Way 3: Example-first explanation

Use a specific case, then connect it to the rule.

Example:

> *"If only 50 concert tickets remain and 500 people want them, the tickets may become more expensive. That is one example of high demand meeting limited supply."*

My example-first explanation:

_____

_____

Accuracy check

For each version, ask:

- Does it preserve the central relationship?
- Are important terms used correctly?
- Does the example actually match the rule?
- Did I make a statement broader than the source supports?
- What detail did I intentionally leave out?

One correction I made after checking:

_____

> *ORION: "If you can only repeat one wording, the idea may still belong to the page. If you can explain it accurately in several forms, it is beginning to belong to you."*

Part 4: Learn How You Learn discovery

Answer honestly. These questions help Orion design tests for your review process; they do not assign you a learning-style identity.

1. When a chapter looks too large, what makes you feel ready to begin?

_____

2. Which is harder for you: deciding what matters or deciding what can be left out? Why?

_____

3. How can you tell the difference between recognizing an explanation and being able to produce it yourself?

_____

4. When have you remembered something because you explained it to another person?

_____

5. When has a diagram, card, or page layout helped you see a relationship?

_____

6. If an audio explanation sounds clear in the moment, how could you test what remained after listening?

_____

Part 5: Build a one-page Understanding Card

Use your Compression Ladder and 3-Ways explanations to complete this card.

```
================================================================
                  ONE-PAGE UNDERSTANDING CARD
================================================================
TOPIC: _____________________________________________________
PURPOSE: ___________________________________________________
SOURCE: ____________________________________________________

MAIN QUESTION
_____________________________________________________________

ONE-SENTENCE CORE
_____________________________________________________________

THREE SUPPORTING PILLARS
1. _____________________________________________________
2. _____________________________________________________
3. _____________________________________________________

ONE EXAMPLE
_____________________________________________________________

KEY TERMS
1. _____________________ = _____________________________
2. _____________________ = _____________________________
3. _____________________ = _____________________________

COMMON MISTAKE OR MISCONCEPTION
_____________________________________________________________

ACCURACY GUARDRAIL-WHAT THIS SHORT VERSION LEAVES OUT
_____________________________________________________________

TWO RETRIEVAL QUESTIONS
1. _____________________________________________________
2. _____________________________________________________
================================================================
```

Orion review prompt

> *"Review my Understanding Card against the source I provide. Identify one sentence that is accurate, one place that may be vague or misleading, and one important detail I may have removed. Do not rewrite the whole card. Ask me to make the correction."*

Correction I chose to make:

_____

Why it improves accuracy:

_____

Part 6: Active comparison-three review formats

Now compare three ways of reviewing the same Understanding Card. The goal is to see what helps you retrieve the idea, not what merely feels comfortable.

Prepare a fair test

Use these five checks after each method:

1. State the one-sentence core.
2. Name the three pillars.
3. Give one example.
4. Explain the common mistake.
5. State the accuracy guardrail.

Score one point for each answer you can produce without looking. If an answer is partly correct, mark it `partial` and describe what was missing instead of inventing a decimal score.

Method A: Audio review

With parent approval, read the card aloud or use an approved text-to-speech feature. Listen once. Put the card away, take a short neutral break, then answer the five checks.

What I remembered without looking:

_____

Correct answers: ____ / 5 Partial answers: ____ Not yet: ____

What audio made easier or harder:

_____

Method B: Visual card review

Study the card as a page for the same amount of time. Cover it, take the same kind of break, then answer the five checks.

What I remembered without looking:

_____

Correct answers: ____ / 5 Partial answers: ____ Not yet: ____

What the card layout made easier or harder:

_____

Method C: Teach-back review

Explain the card aloud to a parent, peer, camera, or voice recorder approved by your parent. If no person or recording is available, teach an empty chair. Do not look at the card while explaining. Then answer the five checks.

What I remembered without looking:

_____

Correct answers: ____ / 5 Partial answers: ____ Not yet: ____

What teach-back made easier or harder:

_____

Fairness checklist

- [ ] I used the same topic and five checks.
- [ ] Each review received about the same amount of time.
- [ ] I answered before checking the source.
- [ ] I recorded partial or incorrect answers honestly.
- [ ] I did not ask Orion to pretend that I remembered something.

Part 7: Evidence interpretation

Method	Correct / 5	Partial	Frustration after (1-5)	Could explain the core?	Useful for this task?
Audio	___	___	___	Yes / Partly / Not yet	Yes / Maybe / No
Visual card	___	___	___	Yes / Partly / Not yet	Yes / Maybe / No
Teach-back	___	___	___	Yes / Partly / Not yet	Yes / Maybe / No

Which method supported the strongest retrieval in this experiment?

_____

What exact evidence supports that conclusion?

_____

Which method felt easy but did not produce strong recall, if any?

_____

Which method may be useful for a different purpose?

_____

What could have influenced the result besides the format?

_____

Use conditional language

Avoid: "I am a visual learner."

Prefer:

> *"When reviewing this kind of topic, the visual card helped me retrieve _____, while teach-back exposed _____. I will test _____ first on another topic before making it a stronger tutor rule."*

My interpretation:

_____

Part 8: Learning Supercharger Blueprint update

The Blueprint is a collection of tutor settings you and Orion test together. This module's setting tells Orion how to begin a review session. It does not declare one format best for every subject or every day.

Proposed tutor setting

`review-start` = [audio | visual-card | teach-back | mixed | not-yet-known]

`use-when` = _____

`evidence` = _____

`accuracy-check` = "Ask me to retrieve before showing the source."

`fallback` = _____

Write it in plain language:

> *"When I review _____, begin with _____. Then ask me to explain the core idea without looking. If my retrieval is incomplete, use _____ and test me again."*

Rule status:

- [ ] `experiment_result`
- [ ] `student_reported`
- [ ] `pending_validation`

Part 9: Structured Knowledge File update

Add the following to the `Course Learning Record` in the same Tutor Project you started in Module 00. Keep the source and uncertainty visible so Orion does not turn one activity into a fixed trait.

```
- rule_id: module_5_review_start
  module: 5
  skill_tested: compression_and_retrieval
  date: "[YYYY-MM-DD]"
  source_activity: "audio_vs_visual_card_vs_teach_back"
  topic: "[topic]"
  compression_purpose: "[preview|study_review|teach_someone|assignment_prep|other]"
  proposed_review_start: "[method or not_yet_known]"
  evidence:
    audio_result: "[correct/partial/not_yet observations]"
    visual_card_result: "[correct/partial/not_yet observations]"
    teach_back_result: "[correct/partial/not_yet observations]"
    accuracy_correction: "[correction made to card]"
  provenance: "[experiment_result|student_reported|pending_validation]"
  confidence: "[low|medium|high]"
  fallback_method: "[method or pending_validation]"
  privacy: "safe_for_tutor_project"
  review_condition: "Retest on another subject or when retrieval remains weak."
```

Ask Orion:

> *"Read my Module 5 record. Tell me what I demonstrated, what is still only a preference, and what should be tested again. Preserve my wording and do not invent a memory score."*

What Orion identified as still uncertain:

_____

Part 10: Proof Artifact-Retention Test Card

```
============================================================
                  PLAYIQ RETENTION TEST CARD
============================================================
Student: _____________________  Date: _____________________
Topic compressed: ____________________________________________
Compression purpose: _________________________________________
Source checked: ______________________________________________

My one-sentence core:

_____________________________________________________________

Accuracy correction I made:

_____________________________________________________________

REVIEW COMPARISON
Audio:       correct ___ / 5 | partial ___ | frustration ___ / 5
Visual card: correct ___ / 5 | partial ___ | frustration ___ / 5
Teach-back:  correct ___ / 5 | partial ___ | frustration ___ / 5

Proposed `review-start`: _____________________________________
Evidence: ____________________________________________________
Fallback: ____________________________________________________
Status: [ experiment_result | student_reported | pending_validation ]
============================================================
```

Keep the Understanding Card and Retention Test Card. They will help Orion learn how your personal tutor should compress, review, and verify information.

Part 11: Mastery Challenge-teach it three ways

Choose a real concept that matters in your current learning. Use a school-approved source.

1. Build a Compression Ladder.
2. Complete the one-page Understanding Card.
3. Ask Orion to flag possible inaccuracies without rewriting it.
4. Correct the card yourself.
5. Teach the concept in all three forms below.

Form A: Big picture

Explain what the concept is and why it matters in two or three sentences.

_____

_____

Form B: Steps or cause-and-effect

1. _____
2. _____
3. _____
4. _____

Form C: Example first

_____

_____

Accuracy defense

What important detail did you choose to keep, and why?

_____

What did you leave out because it was not necessary for this purpose?

_____

How did you confirm that your short explanation was still accurate?

_____

Mastery check

- [ ] My compression answers the topic's main question.
- [ ] My three versions preserve the same core idea.
- [ ] I used an approved source to check accuracy.
- [ ] I identified what the short version leaves out.
- [ ] I retrieved the idea instead of only rereading it.
- [ ] I saved the proof artifact and provenance record.

> *ORION: "You can now make a large topic usable without pretending the short version is the whole truth. In Module 6, you will test what remained, turn mistakes into clues, and build a review plan from real evidence."*

Tutor Project checkpoint - add your Module 5 evidence

Return to the same PlayIQ Tutor Project. Tell Orion:

> *Record my Module 5 compression and retrieval assessment using my PlayIQ course-recordkeeping rules. Separate accuracy/retrieval results from what I said I preferred. Use my actual comparisons, show one dated Course Learning Record entry and any proposed rule, and identify what needs another test. Wait for my approval.*

Paste your completed comparison and review the summary before approving it. Do not add an invented memory score or claim a permanent learning style.

Beta tester feedback-complete only in the beta route

This section appears only after the module is complete in the beta-testing route. Standard-course students do not complete it.

1. Which part made compression feel useful or satisfying?

_____

2. Which instruction, template, or example was confusing?

3. Did the 30-60 second hook feel fast and fun? Why or why not?

4. Did the three-method comparison feel fair and possible to complete?

5. What would add more excitement or usefulness without adding unnecessary work?

PlayIQ Module 6: Self-Testing and Mistake Bank

Your next unlock: turn mistakes into navigation

Imagine a practice game that tells you exactly which move to work on next. Could your study time work more like that? Today you build a Mistake Bank that points to specific repairs instead of sending you back through an entire chapter. The goal is useful clues and a fresh successful attempt.

Your route: Parts 0-3 reveal and record a gap; Parts 4-7 compare practice and plan a return; Parts 8-11 and the Tutor checkpoint check and keep the results. These are checkpoints in the same task. If you pause, mark the next question to attempt and retain your existing Mistake Bank.

Your mission: turn wrong answers into your fastest study map

What if every mistake could tell you exactly what to learn next?

Most students hide mistakes, erase them, or reread the whole chapter. In this module, you will do something more powerful: test what you can produce without looking, investigate why an answer missed, and save the useful clue in a Mistake Bank.

By the end of this module, I can:

- explain why retrieval reveals more than passive rereading;
- classify a mistake without treating it as a personal failure;
- compare one-at-a-time and full-set quiz formats;
- correct an answer and prove the correction with a new question;
- create a realistic spaced-review plan without pretending a reminder exists;
- give Orion a testable quiz-and-feedback setting;
- add evidence-backed mistake and review rules to my future tutor Project.

> *ORION: "A wrong answer is not a verdict. It is a message from the exact edge of what you know. If we read that message correctly, it becomes a map."*

Part 0: The 30-second confidence hook

Without looking back at Module 5, answer quickly:

What were the three supporting parts on your Understanding Card called?

_____

How confident are you?

- [ ] very confident
- [ ] somewhat confident
- [ ] guessing

Now check Module 5.

Result:

- [ ] correct
- [ ] partly correct
- [ ] not yet

There is no penalty. In less than a minute, you discovered two pieces of useful information: what you could retrieve and whether your confidence matched the result. That is more useful than merely feeling that the page looked familiar.

Part 1: Rereading can feel easier than remembering

When the answer is visible, your brain can recognize it. Recognition feels familiar, but a test usually asks you to produce, explain, select, or use the idea without the answer sitting in front of you.

Self-testing closes that gap:

1. Hide the source.
2. Try to retrieve or use the idea.
3. Check against an approved source.
4. Investigate the mistake.
5. Correct it in your own words.
6. Try a new question that tests the same missing skill.

Orion conversation: coach, not answer machine

STUDENT: "I got it wrong. Just tell me the answer."

ORION: "I will help, but first let us use the mistake. Was the problem a missing fact, an unclear word, a skipped step, a rushed error, difficulty using the idea in a new situation, or confidence that did not match the answer?"

STUDENT: "I knew the rule, but I applied it to the wrong number."

ORION: "That may be a step or attention error rather than missing knowledge. Show me the line where you chose the number. Then I will give a hint and a similar question so you can prove the correction."

Why this matters: the same wrong answer can need very different repairs. More rereading will not fix every kind of mistake.

Part 2: The six Mistake Bank categories

Categories are working hypotheses. You can revise one after looking more closely.

1. Knowledge gap

You did not yet know or remember an important fact, rule, or concept.

Example: You cannot explain the purpose of mitochondria because the function was never learned clearly.

Useful repair: return to the core explanation, then retrieve it again.

2. Word gap

An important word, symbol, or instruction was misunderstood.

Example: You answer only one side of a question because you misread `contrast`.

Useful repair: define the term in context and compare an example with a non-example.

3. Step error

You knew the idea but skipped, reversed, or misapplied a step.

Example: You forgot to distribute a negative sign through both terms.

Useful repair: identify the decision point, explain why the step is needed, then try a matched example.

4. Careless or attention error

Your understanding may be present, but the response contains a copying, reading, sign, unit, or checking mistake.

Example: You solve correctly but copy `42` as `24` in the final line.

Useful repair: create a final check that targets the exact repeated risk.

Do not use "careless" as an insult. It describes the event, not the person.

5. Transfer error

You understand the idea in a familiar example but do not yet recognize how to use it in a different situation.

Example: You can identify a metaphor in a practice sentence but miss it inside a poem.

Useful repair: compare the familiar and new cases, identify what stayed the same, and practise one more varied example.

6. Confidence error

Your confidence and your demonstrated answer did not match.

Examples:

- You were certain about an incorrect answer.
- You had a correct explanation but changed it because you did not trust it.

Useful repair: record confidence before checking and learn which clues deserve trust.

Quick classification practice

Choose the most likely category and explain why.

1. Maya knows the formula but changes the denominator when only the numerator should change.

Hypothesis: _____ Why: _____

2. Leo says he remembers the chapter after rereading, but cannot name the chapter's central claim when the book is closed.

Hypothesis: _____ Why: _____

3. Sam correctly solves the practice example but cannot use the same principle in a word problem.

Hypothesis: _____ Why: _____

4. Noor understands the evidence but thinks `justify` means "give the answer" rather than "support it with reasons or evidence."

Hypothesis: _____ Why: _____

> *ORION: "The category is useful only if it changes the next practice move. We are not collecting mistakes to judge you. We are collecting clues so you do not waste practice on the wrong problem."*

Part 3: Create your Mistake Bank

Choose one recent wrong or incomplete answer from school-approved material. If you do not have one, ask Orion for a short practice question on a topic you are learning. Attempt it before receiving feedback.

Mistake Bank entry

Date: _____

Subject and topic: _____

Question or task, summarized in my own words:

_____

My first answer:

_____

My confidence before checking: [ ] high [ ] medium [ ] low

Approved source or answer used to check:

_____

What was correct in my answer?

_____

What was missing or incorrect?

_____

First category hypothesis:

- [ ] knowledge gap
- [ ] word gap
- [ ] step error
- [ ] careless or attention error
- [ ] transfer error
- [ ] confidence error
- [ ] not yet known

Evidence for the category:

_____

The repair loop

Ask Orion:

> *"Act as my learning coach. Here is the question, my answer, and the approved source or teacher feedback. Help me classify the mistake. Ask me one question before giving a hint. Do not rewrite my answer. After I correct it, give me a new question that tests the same skill in a different example."*

Orion's diagnostic question:

_____

My answer:

_____

Hint received, if needed:

_____

My corrected explanation or method:

_____

New transfer question:

_____

My answer:

_____

Transfer result: [ ] correct [ ] partly correct [ ] not yet

Did the original category still fit? [ ] yes [ ] no [ ] unsure

Revised category, if needed: _____

Why this activity matters

A correction is not proven just because the right answer is visible. The new question checks whether you can use the repaired idea yourself.

Part 4: Learn How You Learn discovery

1. What is your first emotional reaction when an answer is wrong or incomplete?

_____

2. What kind of feedback helps you stay in control and try again?

_____

3. What kind of feedback makes you stop thinking or feel overwhelmed?

_____

4. Do you usually notice mistakes during the work, only after checking, or only when someone points them out? Give an example.

_____

5. When would immediate feedback help you? When might finishing a short set before feedback be better?

_____

6. What should your future personal tutor say after a wrong answer so the mistake feels useful but is not ignored?

_____

These responses can inform Orion's tone and feedback sequence, but the active comparison below provides stronger evidence about what worked on this task.

Part 5: Active comparison-two quiz formats

Compare two formats using closely matched questions from the same topic. Ask Orion to keep difficulty similar and to avoid showing answers before you try.

Format A: One question at a time

Prompt:

> *"Quiz me on [topic] with five questions, one at a time. Wait for each answer. Ask for my confidence before checking. If I am wrong, ask one diagnostic question, give one hint if needed, and give a matched follow-up question. Do not continue until I attempt the repair."*

Record the run:

Question	First result	Confidence matched?	Hints	Follow-up result
1	Correct / Partial / Not yet	Yes / No / Unsure	___	Correct / Partial / Not yet
2	Correct / Partial / Not yet	Yes / No / Unsure	___	Correct / Partial / Not yet
3	Correct / Partial / Not yet	Yes / No / Unsure	___	Correct / Partial / Not yet
4	Correct / Partial / Not yet	Yes / No / Unsure	___	Correct / Partial / Not yet
5	Correct / Partial / Not yet	Yes / No / Unsure	___	Correct / Partial / Not yet

Focus during this format (1-5): ____

Frustration after this format (1-5): ____

What immediate feedback helped or interrupted:

_____

Format B: Full set, then feedback

Prompt:

> *"Give me five new questions on [same topic] at similar difficulty. Do not show answers or feedback until I submit all five. Ask me to mark confidence beside each answer. Then help me classify the mistakes and choose one repair at a time."*

Record the run:

Question	First result	Confidence matched?	Mistake category, if any	Repair result
1	Correct / Partial / Not yet	Yes / No / Unsure	_____	Correct / Partial / Not yet
2	Correct / Partial / Not yet	Yes / No / Unsure	_____	Correct / Partial / Not yet
3	Correct / Partial / Not yet	Yes / No / Unsure	_____	Correct / Partial / Not yet
4	Correct / Partial / Not yet	Yes / No / Unsure	_____	Correct / Partial / Not yet
5	Correct / Partial / Not yet	Yes / No / Unsure	_____	Correct / Partial / Not yet

Focus during this format (1-5): ____

Frustration after this format (1-5): ____

What uninterrupted answering helped or made harder:

_____

Fair comparison checklist

- [ ] Both quizzes used the same topic.
- [ ] The questions were similar in difficulty, as far as I could judge.
- [ ] Both had five questions.
- [ ] I answered before seeing feedback.
- [ ] I marked partial answers honestly.
- [ ] I used results as local evidence, not an official grade or PDI score.

Part 6: Evidence interpretation

Evidence	One-at-a-time	Full set
First answers correct	___ / 5	___ / 5
Partial answers	___	___
Not-yet answers	___	___
Repairs completed	___	___
Focus (1-5)	___	___
Frustration (1-5)	___	___
Confidence mismatches noticed	___	___

Which format helped you notice and repair mistakes more clearly?

_____

Which format helped you maintain focus?

_____

Did one format produce better first answers while the other produced better repairs?

_____

What evidence is strongest? What evidence is still uncertain?

_____

What else may have affected the comparison?

_____

Interpret without a fixed label

Do not conclude, "I can only be tested one question at a time."

Prefer:

> *"For this topic and session, _____ supported _____. I want Orion to try that format first when _____, and use _____ when I need to practise working through a set without interruption."*

My evidence-based interpretation:

_____

No PDI score is calculated in this module. Your answer results, repair results, confidence observations, and review plan are useful evidence on their own. They must not be converted into an unapproved composite formula or an invented parent-dashboard claim.

Part 7: Build a spaced-review plan

One successful correction may fade. Spaced review means returning after time has passed so retrieval requires effort again.

A starting rhythm you may test is:

- Review 1: later today or after a meaningful break;
- Review 2: the next day;
- Review 3: about three days later;
- Review 4: about one week later.

This is a starting plan, not a guaranteed memory formula. School deadlines, topic difficulty, your schedule, and your results may require changes.

Choose how you will remember

Use only a method actually available and approved by your parent:

- [ ] paper planner
- [ ] parent-approved calendar entry
- [ ] school agenda
- [ ] phone reminder approved by parent
- [ ] checklist kept with the Mistake Bank
- [ ] another real method: _____

Do not assume PlayIQ, Orion, a dashboard, or an AI platform will automatically send an alert unless that behavior is visibly available and verified in the tool you are using.

My review plan

Review	Planned date/time	Retrieval question	Result after completion
1	_____	_____	Correct / Partial / Not yet / Pending
2	_____	_____	Correct / Partial / Not yet / Pending
3	_____	_____	Correct / Partial / Not yet / Pending
4	_____	_____	Correct / Partial / Not yet / Pending

How will I decide whether to continue, change, or retire this review item?

_____

Example rule:

> *"If I retrieve and apply the idea correctly on two separated reviews, move it to a later check. If I miss it, diagnose the new mistake and practise a matched example before scheduling the next review."*

Part 8: Learning Supercharger Blueprint update

This setting tells your future tutor how to begin quizzes and respond to mistakes. It is a testable instruction, not a claim that one format always wins.

Proposed tutor settings

`quiz-start` = [one-at-a-time | full-set | depends-on-purpose | not-yet-known]

`best-use-condition` = _____

`after-wrong-answer` = _____

`hint-policy` = "Ask me one diagnostic question before giving a hint."

`proof-policy` = "After a correction, give me a new matched question."

`fallback-format` = _____

Write the complete rule in your own words:

> *"When I am practising _____, begin with _____. After a wrong or incomplete answer, _____. Do not reveal the answer before I try. After I correct it, _____."*

Rule status:

- [ ] `experiment_result`
- [ ] `student_reported`
- [ ] `pending_validation`

Part 9: Structured Knowledge File updates

Keep the tutor rule separate from individual mistake records. This helps your future personal tutor understand both how to quiz you and what needs more practice.

A. Learning rule record

Add to the `Course Learning Record` in the same Tutor Project you started in Module 00:

```
- rule_id: module_6_quiz_and_repair
  module: 6
  skill_tested: self_testing_and_mistake_repair
  date: "[YYYY-MM-DD]"
  source_activity: "one_at_a_time_vs_full_set_quiz"
  topic: "[topic]"
  proposed_quiz_start: "[format or not_yet_known]"
  evidence:
    one_at_a_time_result: "[observations]"
    full_set_result: "[observations]"
    repair_observation: "[what helped correction]"
    confidence_observation: "[what was noticed]"
  after_wrong_answer: "[student-approved response sequence]"
  fallback_format: "[format or pending_validation]"
  provenance: "[experiment_result|student_reported|pending_validation]"
  confidence: "[low|medium|high]"
  privacy: "safe_for_tutor_project"
  review_condition: "Retest for a different purpose or when the setting stops helping."
```

B. Mistake Bank record

Keep this mistake entry with the Module 6 record or in its clearly labeled Mistake Bank section in the same Tutor Project. Do not create a new project:

```
- mistake_id: "[date-topic-short-label]"
  module_added: 6
  date: "[YYYY-MM-DD]"
  subject: "[subject]"
  topic: "[topic]"
  source: "[school-approved source or practice origin]"
  first_answer_summary: "[student-authored summary]"
  category_hypothesis: "[knowledge|word|step|attention|transfer|confidence|unknown]"
  evidence_for_category: "[observation]"
  correction_in_students_words: "[correction]"
  matched_question_result: "[correct|partial|not_yet]"
  review_status: "[scheduled|in_progress|retired|pending]"
  next_review: "[date or pending]"
  provenance: "student_work_plus_checked_source"
  privacy: "[safe_for_tutor_project|parent_approval_required|do_not_include]"
```

Ask Orion:

> *"Check these Module 6 records for unsupported claims. Separate my quiz-format preference from the experiment result. Do not calculate a PDI or invent progress. Identify any missing source, privacy, or pending-validation field."*

One issue Orion found or one field confirmed complete:

_____

Part 10: Proof Artifact-Quiz and Mistake Repair Card

```
================================================================
              PLAYIQ QUIZ AND MISTAKE REPAIR CARD
================================================================
Student: _____________________  Date: _____________________
Topic tested: ____________________________________________

QUIZ COMPARISON
One-at-a-time: correct ___ / 5 | partial ___ | focus ___ / 5
Full set:      correct ___ / 5 | partial ___ | focus ___ / 5

Proposed `quiz-start`: ___________________________________
Best-use condition: ______________________________________
Fallback: ________________________________________________

MISTAKE REPAIR
Category hypothesis: _____________________________________
Correction made: _________________________________________
Matched question: [ correct | partial | not yet ]

REVIEW
Real reminder method selected: ___________________________
Next review date: ________________________________________

Rule status:
[ experiment_result | student_reported | pending_validation ]

No PDI or dashboard result claimed.                  [ checked ]
================================================================
```

Save the card, learning rule, and Mistake Bank record. These become evidence for how your personal tutor Project should quiz, correct, and schedule practice when you assemble it later in the course.

Part 11: Mastery Challenge-repair and retest

Choose one real mistake that matters to your current learning.

1. Attempt a question without looking at the answer.
2. Mark your confidence.
3. Check it against an approved source.
4. Classify the mistake as a hypothesis.
5. Ask Orion one diagnostic question and request a hint only if needed.
6. Correct the explanation or process in your own words.
7. Complete a new matched question.
8. Schedule a later retrieval using a reminder method you can actually access.

Mastery record

Topic: _____

First result: [ ] correct [ ] partial [ ] not yet

Confidence before checking: [ ] high [ ] medium [ ] low

Mistake category and evidence:

_____

My correction:

_____

_____

New matched question:

_____

My answer:

_____

Matched result: [ ] correct [ ] partial [ ] not yet

If it is still not correct, what is my next smallest repair?

_____

Later review date and reminder method:

_____

Mastery check

- [ ] I tested before looking.
- [ ] I used a mistake category to choose a repair.
- [ ] I corrected the idea in my own words.
- [ ] I attempted a new question instead of only reading the correction.
- [ ] I made a real review plan without claiming an unavailable alert.
- [ ] I saved both knowledge-file records with provenance.

The later review may remain marked `pending`; never fill in a result before it happens. When it is complete, return and record the actual evidence.

> *ORION: "You now know how to find the edge of your knowledge and decide what deserves another attempt. In Module 7, you will organize useful context and study materials so your tutor can work from clear, approved knowledge instead of guessing what you mean."*

Tutor Project checkpoint - add your Module 6 evidence

Return to the same PlayIQ Tutor Project. Tell Orion:

> *Record my Module 6 self-test and mistake-repair assessment using my PlayIQ course-recordkeeping rules. Keep my confidence rating separate from my checked answer. Record the mistake category as a hypothesis unless the evidence supports it, show the dated entry and proposed review plan, and wait for my approval.*

Paste your actual answer/check results and the review date you chose. Review and approve only the accurate, privacy-safe record.

Beta tester feedback-complete only in the beta route

This section appears only after the module is complete in the beta-testing route. Standard-course students do not complete it.

1. Did the fast confidence hook make self-testing feel clear and safe?

_____

2. Which Mistake Bank category needs a better example?

_____

3. Where did the lesson feel too long, confusing, or repetitive?

_____

4. Which quiz format kept you thinking most actively, and what happened?

_____

5. Did any Orion prompt reveal too much or fail to give enough guidance?

_____

6. What would make mistake repair feel more motivating without hiding the mistake?

_____

PlayIQ Module 7: Build Knowledge Files Your Tutor Can Trust

Your next unlock: give your Tutor a useful field guide

Imagine opening your AI and having the right notes, examples, and unanswered questions ready to work with. Today you make one small, trustworthy Study Pack. You choose its sources and test whether it helps; a bigger pile of uploads is not the win. A file you can trace and use is.

Your route: Parts 0-2 reveal the file's structure; Parts 3-5 build and test your Study Pack; Parts 6-9 and the Tutor checkpoint review and add the approved result. If you pause, keep the same pack and mark its next unfinished section.

Your mission: turn scattered notes into a tutor-ready Study Pack

Have you ever opened a page of notes and thought, "I know I wrote this, but I still do not know what matters"?

Have you ever asked an AI to quiz you, only to get questions about information that was never in your notes?

In this module, you will turn one small set of school notes into a clean Knowledge File that helps both you and Orion understand the topic. You are not building a giant database. You are making one useful file, testing it, and learning what makes information trustworthy.

By the end, I can:

- separate source facts from my own summary;
- organize one topic into a clean Study Pack;
- add provenance so Orion knows where the information came from;
- turn notes into questions and identify missing links;
- compare a messy note dump with an organized Knowledge File;
- create a testable `knowledge-file-use` rule for my future personal tutor;
- add one approved, privacy-safe file to my Tutor Knowledge Pack.

You will need:

- one short set of school-approved notes on a topic you understand at least a

little;

- your private, parent-approved AI workspace;
- your Module 6 Mistake Bank, if you have one;
- this workbook or a digital copy of it.

Do not upload private class records, another student's work, passwords, account details, or anything your parent or teacher has not approved for AI use.

Part 0 - The 30-second clean-file challenge

Look at these two ways of saving the same fact.

Version A

> *plants sun energy food chlorophyll maybe roots water photosynthesis oxygen*

Version B

> *Topic: Photosynthesis Source fact: Plants use light energy, water, and carbon dioxide to make glucose, releasing oxygen. Key term: Chlorophyll - a pigment that absorbs light.*

Which version would be easier to study tomorrow? Circle one: A / B

Write one reason:

_____

_____

There is no hidden trick. You just made your first file-design decision.

ORION: "A useful Knowledge File does not need to look fancy. It needs to make the important information easy to find, trace, test, and update. Today, you will teach your future tutor where the facts came from and how to use them without pretending it knows more than the file contains."

Why this matters: your personal tutor will eventually use the files you choose to give it. Clear files reduce guessing. Provenance helps you check the source. Questions turn saved information into practice.

Part 1 - What a Knowledge File really is

A Knowledge File is an organized document that gives an AI useful context for a specific purpose.

It is not automatically true because it is neatly formatted. It becomes more trustworthy when it clearly separates:

1. what the original source says;
2. what you wrote in your own words;
3. what you are still unsure about;
4. what Orion or another AI suggested;
5. what you checked and approved.

Source, summary, question, or guess?

Read each line and mark what it is.

Line	Source fact	My summary	Question	Unchecked guess
"The textbook says mitochondria release usable energy from food."	[ ]	[ ]	[ ]	[ ]
"I think of mitochondria as the cell's energy station."	[ ]	[ ]	[ ]	[ ]
"How is energy stored before the cell uses it?"	[ ]	[ ]	[ ]	[ ]
"Mitochondria probably control every part of the cell."	[ ]	[ ]	[ ]	[ ]

Suggested interpretation:

- The first line reports a source fact.
- The second is a student-created memory explanation.
- The third is a question.
- The fourth is an unchecked guess and should not be stored as a fact.

Why this activity matters

An AI may write every sentence in the same confident tone. Labels help Orion tell the difference between evidence, your own understanding, and something that still needs checking.

ORION: "If I cannot tell where a statement came from, I should not act as if it is confirmed. Give me a label, and I can help you verify it."

Part 2 - Build the eight-part Study Pack

Your Module 7 Knowledge File will use eight parts. Each part has a job.

1. File identity

This tells Orion what the file is about and whether it is current.

```
title: [clear topic name]
subject: [school subject]
created_by: [student]
created_date: [YYYY-MM-DD]
last_reviewed: [YYYY-MM-DD or pending]
status: draft
privacy: safe_for_tutor_project
```

Why it matters: the title finds the file, the date helps detect stale material, and the status prevents a draft from being mistaken for a verified final copy.

2. Source record

Record only what you need to find the source again.

```
sources:
  - source_id: S1
    type: [class notes | textbook | teacher handout | approved website]
    title: [source title]
    section_or_page: [location or unknown]
    access_date: [YYYY-MM-DD or not_applicable]
    verification_status: student_checked
```

Do not paste a private login link or another person's identifying information.

Why it matters: provenance means knowing where information came from. It lets you, Orion, a parent, or a teacher trace an important claim instead of trusting it only because it sounds convincing.

3. Source notes

Copy only short, permitted facts or write accurate notes from the source. Give each fact a source label.

```
- [S1] Fact or note from the source.
- [S1] Another fact or note from the same source.
- [S2] A fact from a different approved source.
```

Why it matters: Orion can connect claims to sources and can tell you when the file does not contain enough information to answer.

4. Ten-line summary

Write the first version yourself. Use no more than ten short lines.

A useful summary includes:

- the main idea;
- the most important parts or steps;
- one cause-and-effect connection;
- one example;
- one limit, exception, or uncertainty when relevant.

Why it matters: choosing what belongs in ten lines forces you to process the topic. Copying an entire page saves words but may not build understanding.

5. Key terms

Choose five terms that unlock the topic.

```
Term:
Meaning in my own words:
Source:
Example or connection:
```

Why it matters: one missing word can make an entire explanation feel harder than it really is.

6. Questions for active recall

Turn the notes into questions that make you retrieve or use the information.

- Easy: checks a key fact or definition.
- Medium: explains a step, cause, or connection.
- Challenge: applies, compares, predicts, or solves.

Why it matters: notes become more useful when they can test you. Rereading can feel familiar even when you cannot recall the idea without looking.

7. Missing links and Mistake Bank connection

Record what is not yet clear.

```
Missing word:
Missing background fact:
Missing step:
Missing connection:
Related Mistake Bank entry:
Next question to investigate:
```

Why it matters: confusion becomes a target instead of a fog. Orion can help with the missing piece rather than repeating the whole chapter.

8. Precision tutor prompt

Tell Orion how to use the file.

```
Role: Act as my learning coach.
Task: Quiz me on [topic] using only the approved Study Pack.
Limits: If the file does not support an answer, say "Not found in this file."
Format: Ask one easy, one medium, and one challenge question, one at a time.
Effort rule: Wait for my attempt. Give one hint before explaining.
Verification: Cite the source label connected to your explanation.
```

Why it matters: a file supplies the context; the prompt supplies the job and boundaries.

Part 3 - Learn how you use information

Answer these discovery questions. They are clues for today's experiment, not permanent labels about your brain.

Discovery question 1

When notes look crowded, what is your first reaction?

- [ ] I start anyway.
- [ ] I search for the main idea first.
- [ ] I reorganize before studying.
- [ ] I avoid the notes or feel overwhelmed.
- [ ] Something else: _____

What usually helps you begin?

_____

Discovery question 2

When you make a summary, what is hardest right now?

- [ ] Deciding what matters.
- [ ] Writing it in my own words.
- [ ] Keeping it short.
- [ ] Knowing whether it is accurate.
- [ ] Connecting the ideas.

Why did you choose that answer?

_____

Discovery question 3

Which type of study question gives you the most useful practice today: easy, medium, or challenge? Why?

_____

_____

Discovery question 4

When Orion uses your notes, what mistake would bother you most?

- [ ] Adding facts that are not in the file.
- [ ] Asking vague questions.

- [ ] Giving the answer before I try.
- [ ] Using an old or incorrect source.
- [ ] Something else: _____

Discovery question 5

What information about you or your schoolwork should not be included in your future personal tutor files?

_____

_____

ORION: "Your answers tell us what to test. They do not lock you into one way of studying. A different subject or a different day may need a different file or quiz format."

Part 4 - Build your first clean Study Pack

Choose a topic with enough material for a short quiz. Keep the source small enough to review carefully.

My file identity

Topic: _____

Subject: _____

Created date: _____ Status: [ ] draft [ ] student-checked

Privacy check:

- [ ] I am allowed to use this material.
- [ ] It contains no unnecessary personal information.
- [ ] I know where the source came from.

My source record

Source ID: _____

Type and title: _____

Page, section, lesson, or location: _____

Verification status: [ ] student-checked [ ] needs checking

My source notes

Write five to ten short notes. Put the source ID beside each one.

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____

My ten-line summary

Write this version yourself before asking Orion for feedback.

1. _____
2. _____
3. _____
4. _____
5. _____

6. _____
7. _____
8. _____
9. _____
10. _____

Five key terms

Term	Meaning in my words	Source ID	Example or connection
1.			
2.			
3.			
4.			
5.			

Turn the notes into questions

Easy question:

_____

Medium question:

_____

Challenge question:

_____

Find one missing link

I understand: _____

I am missing: [ ] a word [ ] background [ ] a step [ ] a connection

My missing-link question:

_____

Related Mistake Bank entry, if any:

_____

Ask Orion for feedback without giving away ownership

Paste only the approved Study Pack and use:

> *"Act as my knowledge-file coach. Check whether my ten-line summary matches the source notes I provided. Identify one missing connection and one unclear line. Do not rewrite the summary. Refer to source IDs when you explain your feedback. If the file does not contain enough information, say so."*

Orion's first useful feedback:

_____

What I changed myself:

_____

What I did not change, and why:

_____

Part 5 - Active comparison: messy notes versus a clean file

You will use the same topic and the same five-question standard in both tests. This keeps the comparison fair enough to learn from, but one small test still does not prove a permanent preference.

Test A - Messy note dump

1. Make a temporary copy of your source notes as one unlabelled paragraph.
2. In a fresh conversation, paste that paragraph.
3. Ask:

> *"Quiz me on this material with five questions. Wait for all five answers, then show which source sentence supports each correction."*

4. Answer without looking back at the notes.
5. Mark any question or correction that cannot be traced to the pasted text.

Test B - Clean Study Pack

1. In another fresh conversation, paste your organized Study Pack.
2. Use the same request:

> *"Quiz me on this material with five questions. Wait for all five answers, then show which source label supports each correction."*

3. Answer without looking back at the file.
4. Mark any question or correction that cannot be traced to a source label.

Evidence table

Use real observations. If something cannot be measured, write `not observed` or `not tested`.

Evidence	Test A: messy notes	Test B: clean Study Pack
Correct answers	____ / 5	____ / 5
Questions clearly connected to the provided material	____ / 5	____ / 5
Unsupported or untraceable claims noticed	____	____
Time to complete	____ min	____ min
Frustration during the test (1-5)	____	____
Help or clarification needed	____	____

Which test made it easier to check Orion's questions and corrections?

_____

Which test helped you retrieve the topic more clearly?

_____

What part of the file organization created the biggest difference, if any?

_____

Interpret the evidence without turning it into a label

Complete these statements:

What I observed:

_____

A possible explanation:

_____

Another explanation I should keep open:

_____

Examples of other explanations include topic familiarity, question quality, fatigue, the order of the tests, or an incomplete source file.

What I want to test again on another topic:

_____

Do not write, "I am an organized learner forever." A stronger conclusion is, "For this topic, source labels and a short summary made Orion's questions easier to check. I will test the same format again."

Part 6 - Learning Supercharger Blueprint update

Your Learning Supercharger Blueprint records settings for your future tutor to try. It is not a personality test and it does not decide the only way you can learn.

In this module, the setting controls how your tutor should use Knowledge Files. You choose a first version based on the evidence, Orion tests it in real study sessions, and you can keep, revise, or remove it later.

Choose a testable setting

Check the actions supported by today's evidence:

- [ ] Ask me to name the topic and source before using a file.
- [ ] Separate source facts, my summary, and unanswered questions.
- [ ] Use source IDs when correcting or explaining.
- [ ] Say `not found in this file` instead of guessing beyond the file.
- [ ] Ask me to organize a very messy note dump before creating a quiz.
- [ ] Let me use quick raw notes first, then help me organize them afterward.
- [ ] Another setting: _____

Write your rule in plain language:

_____

_____

Structured rule:

```
rule_id: knowledge-file-use
status: pending_validation
instruction: [write the tutor behavior to test]
applies_when: [the tutor is using student-provided study material]
evidence: [messy-versus-clean comparison result]
review_condition: [test on another topic or revise if it slows learning]
```

Student decision: [ ] approve for testing [ ] revise first [ ] do not add

Why this setting may help:

_____

Part 7 - Tutor Knowledge Pack update with provenance

Save the Study Pack as a separate file. Suggested filename:

`M07_[Subject]_[Topic]_Study_Pack.md`

Then add this module record to your Learning Rules Knowledge File. Replace every bracketed placeholder with your actual evidence. Do not claim a result you did not observe.

```
module_record:
  module: 7
  date: [YYYY-MM-DD]
  skill_tested: knowledge_file_design
  experiment: messy_notes_vs_clean_study_pack
  result:
    organized_file_helped_checkability: [yes | no | mixed | not_tested]
    organized_file_helped_retrieval: [yes | no | mixed | not_tested]
    unsupported_claims_observed:
      messy: [number | not_observed]
      organized: [number | not_observed]
  proposed_tutor_rule:
    rule_id: knowledge-file-use
    instruction: [student-approved wording]
    status: [pending_validation | student_approved | rejected]
  provenance:
    evidence_type: experiment_result
    student_artifact: [Study Pack filename]
    source_ids: [S1]
    student_approved: [true | false]
  privacy: safe_for_tutor_project
  next_test: [what should be tested again]
```

Orion compilation checkpoint

Use the same PlayIQ Tutor Project you started in Module 00. Submit or copy the following to Orion there:

- your Study Pack;
- your comparison table;
- your proposed tutor rule;
- your privacy choice;
- your next test.

ORION: "I will add only what you approve. I will mark this rule as an experiment result or pending validation unless repeated evidence supports it. If you approve the Study Pack and its source, scope, and privacy check, you may add this file to the same Tutor Project."

What Orion says it will add or change:

_____

Does that summary feel accurate? [ ] Yes [ ] No, revise it

Student approval: _____ Date: _____

Part 8 - Proof Artifact: File Quality Test Card

Complete this card. A screenshot or saved copy becomes your proof that you tested the skill.

```
============================================================
              PLAYIQ FILE QUALITY TEST CARD
============================================================
Student: _____________________________________________
Topic organized: _____________________________________
Study Pack filename: _________________________________
Source IDs recorded: _________________________________

Messy test score:                  ____ / 5
Clean-file test score:             ____ / 5
Traceable messy questions:         ____ / 5
Traceable clean-file questions:    ____ / 5
Unsupported claims noticed:        messy ____  clean ____

Rule proposed: knowledge-file-use
Rule status: [ pending_validation | student_approved | rejected ]
Privacy: [ safe_for_tutor_project | parent_approval_required | do_not_include ]

One thing the evidence suggests:
_____________________________________________________

One thing the evidence does not prove:

_____________________________________________________
============================================================
```

Part 9 - Mastery Challenge: build a tutor-ready Study Pack

To unlock Module 8, complete one final Study Pack without copying the example.

Your pack must contain:

- [ ] a clear subject and topic;
- [ ] a privacy classification;
- [ ] at least one traceable source record;
- [ ] five to ten source-labelled notes;
- [ ] a student-written summary of no more than ten lines;
- [ ] five key terms in your own words;
- [ ] one easy, one medium, and one challenge question;
- [ ] one missing-link question;
- [ ] one connection to your Mistake Bank, or `none observed`;
- [ ] a precision tutor prompt with a source boundary and effort rule;
- [ ] a draft, student-checked, or needs-review status.

Orion's review conversation

Use this prompt with the approved file:

> *"Review my Study Pack as a learning coach. Do not add facts from outside the file. Check whether the summary matches the source-labelled notes, whether the questions cover more than memorization, and whether any claim needs a source. Ask me to make the corrections myself. End with one question that tests the missing connection."*

Corrections Orion requested:

1. _____
2. _____

Corrections I made myself:

1. _____
2. _____

Final status: [ ] student-checked [ ] needs teacher/parent review

Mastery reflection

Why is a clean-looking file not automatically a trustworthy file?

How will provenance help your future personal tutor?

What should Orion do when the answer is not supported by the file?

ORION: "You have moved from saving notes to designing context. In Module 8, you will protect something just as important as the facts: your own voice. Your Knowledge Files will carry what you know; your tutor rules will make sure AI helps you express it without taking over."

Tutor Project checkpoint - add your Module 7 Study Pack

Return to the same PlayIQ Tutor Project. First ask Orion to read back the Study Pack's source, topic, date/scope, and limitations. Then test one answer against the pack and the original approved source. Tell Orion:

> *Record my Module 7 Knowledge File assessment using my PlayIQ course-recordkeeping rules. Show the source and scope, the retrieval test, any unsupported claim, and the proposed file-use rule. Do not add or upload the Study Pack until I approve it. Wait for my approval.*

Only after you and your parent approve the file should you add it to the same Tutor Project's knowledge area. Keep the workbook and any private school records out of the project unless separately approved.

Beta tester feedback - complete only in the beta route

This section appears only for beta testers and stays at the very end of the module.

1. Did the 30-second challenge make the purpose of the module clear? Why or why not?

2. Which Study Pack section was most useful?

3. Which instruction or template was still confusing?

4. Did the messy-versus-clean comparison feel fair and useful?

5. What would make this module faster, more fun, or easier to complete without removing the important learning?

PlayIQ Module 8: Protect Your Voice and Make Your Answers Clear

Your next unlock: make your idea land

Imagine explaining an idea so clearly that someone else can finally see what you see. Which idea would you want heard? This module helps you shape your own words into an answer you can stand behind, while Orion coaches the parts that need work.

Your route: Parts 0-3 explore clear writing; Parts 4-7 compare and refine your own work; Parts 8-11 and the Tutor checkpoint prove ownership and keep the evidence. Continue through the existing activities in order. If you pause, mark the Part and keep your original draft with the same revision notes.

Your mission: use AI as a writing coach without letting it become your writer

Have you ever known the answer in your head but struggled to make it clear on the page?

Have you ever read an AI paragraph that sounded polished but strangely empty, as if nobody real was speaking?

In this module, you will learn a writing system that keeps your ideas, your choices, and your voice in control. Orion can help you find a missing reason, notice an unclear sentence, or ask a useful question. You will still make the claim, choose the evidence, explain the reasoning, and write the final answer.

By the end, I can:

- organize a short answer with Claim, Evidence, and Reasoning;
- use an outline to make writing easier to start;
- ask Orion for specific coaching instead of a replacement answer;
- compare ghostwritten output with coached revision;
- identify language that does and does not sound like me;
- create testable writing-coach rules for my future personal tutor;
- save a privacy-safe Writing Voice and Coaching Rules Knowledge File;
- prove that I can revise my own work while keeping ownership.

You will need:

- a safe practice topic or a short piece of your own school writing that you

are permitted to use;

- your private, parent-approved AI workspace;
- the Study Pack you made in Module 7, if you want to use its source facts;
- this workbook or a digital copy.

Do not upload private teacher comments, grades, another student's writing, or school material that you do not have permission to share.

Part 0 - The 30-second voice spark

Finish this sentence in a way that sounds like you:

> *If I could improve one thing about school, I would _____ because _____.*

Do not ask AI. Do not try to sound impressive. Just write one honest sentence.

Now underline one word or phrase that sounds especially like you.

There is no right answer and no hidden test. You have just created a tiny voice sample that belongs to you.

ORION: "Your voice is not just slang, jokes, or sentence length. It is the way you choose an idea, connect it to evidence, explain why it matters, and decide what you really mean. I can help you make that voice clearer. I should not replace it."

Why this matters: your future personal tutor needs instructions that protect your ownership. It should coach your thinking, show you choices, and wait for you to revise instead of producing work that pretends to be yours.

Part 1 - Clear writing makes thinking visible

A teacher cannot see the answer in your head. Clear writing creates a path the reader can follow.

One useful path is CER:

- Claim: your answer or main point;
- Evidence: the fact, example, quotation, observation, or data that supports the claim;
- Reasoning: your explanation of how or why the evidence supports the claim.

See CER in action

Question: Why did the covered cup of water stay cooler in the sun?

Claim: The cover helped the water stay cooler.

Evidence: After twenty minutes, the covered cup measured 3 degrees cooler than the uncovered cup in the same location.

Reasoning: Because both cups were in the same location, the temperature difference suggests that the cover reduced some of the direct heating from sunlight.

Notice what the reasoning does. It does not merely repeat the evidence. It explains the connection while avoiding a claim larger than the observation can support.

Quick CER check

Read this answer:

> *School gardens can support science learning because students can observe plant growth over time. For example, they can measure how light or water changes growth. This gives students direct evidence they can compare with ideas from class.*

Underline the claim. Box the evidence or example. Circle the reasoning.

What would make the answer even stronger?

_____

Why this activity matters

CER gives Orion something specific to coach. Instead of saying, "Make this better," you can ask, "Is my evidence relevant?" or, "Did I explain the link between my evidence and my claim?"

Part 2 - Outline first so the blank page has fewer decisions

An outline is not the final paragraph. It is a small map.

Use this five-line Answer Map:

```
Question or task:
My claim:
My best evidence:
The connection I need to explain:
One uncertainty or check I still need:
```

Example Answer Map

```
Question or task: Why are pollinators important?
My claim: Pollinators help many plants reproduce.
My best evidence: Pollen must move between flowers for many plants to produce
seeds or fruit.
The connection I need to explain: Animals such as bees move that pollen while
feeding, so their activity supports the plant's reproduction.
One uncertainty or check I still need: Which food crops depend most on animal
pollination?
```

The outline does not write the assignment. It reduces the number of choices you have to hold in your mind at once.

Try a two-minute Answer Map

Choose a safe practice question:

- Why is sleep important for learning?
- Should students have short movement breaks during long classes?
- Why does checking an AI answer matter?
- A question from your approved Study Pack: _____

Question or task:

_____

My claim:

_____

My best evidence:

_____

The connection I need to explain:

_____

One uncertainty or check I still need:

_____

What became easier after making the map?

_____

What is still difficult?

_____

ORION: "If the map is incomplete, I can ask a question about the missing part. I do not need to fill the page for you."

Part 3 - Ask for coaching that leaves the decisions with you

Compare these requests.

Replacement request

> *"Write my paragraph about sleep. Make it sound like me."*

Coaching request

> *"Act as my writing coach. Review my Answer Map for claim, evidence, and reasoning. Ask me one question about the weakest part. Then give up to three specific suggestions without writing any sentences for me."*

The second request protects ownership because you provide the thinking and Orion responds with questions and feedback.

The PlayIQ writing-coach prompt

```
Role: Act as my writing coach, not my ghostwriter.
Context: I will provide the task, my Answer Map, and my own draft.
Check: Focus on [claim | evidence | reasoning | organization | clarity].
Limits: Do not rewrite sentences or create a final answer for me.
Format: Ask one diagnostic question, then give up to three specific suggestions.
Voice rule: Point out words that sound generic or unlike my sample, but let me
choose the replacement.
Evidence rule: Identify unsupported claims and ask me for a source or a smaller
claim.
Effort rule: Wait for my revision before giving more feedback.
```

What useful feedback sounds like

Useful coaching is specific and actionable:

- "Your claim answers the question, but the evidence is still general. What

observation or source fact could you add?"

- "The reasoning repeats the evidence. Explain why that fact leads to your claim."
- "This phrase sounds more formal than the rest of your writing. Would you normally say it this way?"

Less useful feedback is vague or takes over:

- "Make it better."
- "This is bad."
- a replacement paragraph;
- a long list of edits with no explanation.

Why this matters: good feedback teaches you what to notice the next time. A replacement answer may finish one task without improving your skill.

Part 4 - Learn what supports your writing today

Answer these discovery questions. They describe current habits and preferences to test. They are not fixed writing identities.

Discovery question 1

What usually makes starting hardest?

- [ ] I do not know my main point yet.
- [ ] I know the point but cannot find evidence.
- [ ] I have too many ideas and cannot order them.
- [ ] I am worried the first sentence must be perfect.
- [ ] Something else: _____

What first step might reduce that difficulty?

_____

Discovery question 2

Which kind of feedback feels most useful today?

- [ ] One question at a time.
- [ ] A short list of suggestions.
- [ ] A CER checklist.
- [ ] A before-and-after comparison of my own drafts.
- [ ] A spoken conversation.

Why?

_____

Discovery question 3

How can you tell when a sentence does not sound like you?

_____

_____

Discovery question 4

When feedback suggests a change, what helps you decide whether to accept it?

_____

_____

Discovery question 5

What must your future personal tutor never do during a school writing task?

_____

What should it do instead?

_____

ORION: "You are allowed to disagree with feedback. Staying in control means you can explain why you accepted, changed, or rejected a suggestion."

Part 5 - Build a small Writing Voice Evidence File

Your future tutor needs evidence of your voice, not an instruction to imitate an invented personality.

Choose three short samples written by you. They can come from this workbook. Do not use private writing you do not want in your tutor Project.

Voice sample 1 - how I explain

Student-authored sentence:

_____

What sounds like me in this sample:

_____

Voice sample 2 - how I give an opinion

Student-authored sentence:

_____

What sounds like me in this sample:

_____

Voice sample 3 - how I connect evidence to an idea

Student-authored sentence:

_____

What sounds like me in this sample:

_____

Voice boundaries

Complete these statements:

I want feedback to preserve: _____

I do not want Orion to automatically change: _____

I want Orion to flag when: _____

I want the final wording to be chosen by: _____

Privacy status of these samples:

- [ ] safe for tutor project;
- [ ] parent approval required;
- [ ] use only in this activity and do not include.

Why this matters: a personal tutor should understand how to coach you without pretending to be you. The samples are reference evidence, not permission to generate assignments in your voice.

Part 6 - Active comparison: replacement writing versus coached revision

This experiment uses a short practice answer, not a graded submission. You will compare what each workflow teaches you and how well each one preserves your ownership.

Use the same practice question for both tests:

_____

Test A - Generic replacement answer

In a fresh conversation, ask:

> *"Write a short answer to this practice question using Claim, Evidence, and Reasoning: [paste practice question]."*

Read the result, but do not submit it as your work and do not copy it into your own draft.

Mark your observations:

- [ ] I can identify its claim.
- [ ] I can identify its evidence.
- [ ] I can identify its reasoning.
- [ ] It uses facts that need checking.
- [ ] It sounds like something I would naturally write.
- [ ] I learned a writing decision I can explain.

One phrase that sounds generic, unsupported, or unlike me:

_____

Test B - My draft plus coaching

Use your Answer Map to write your own three-to-five-sentence practice answer.

My first draft:

_____

_____

_____

_____

Now paste your Answer Map, draft, and one approved voice sample. Use:

> *"Act as my writing coach. Check my claim, evidence, reasoning, clarity, and voice. Ask one diagnostic question and give up to three suggestions. Do not rewrite any sentence. Point out unsupported claims. Wait for me to revise."*

Orion's diagnostic question:

_____

Suggestion 1:

_____

Suggestion 2:

_____

Suggestion 3:

_____

For each suggestion, decide instead of accepting automatically.

Suggestion	Accept, adapt, or reject?	My reason
1		
2		

Suggestion	Accept, adapt, or reject?	My reason
3		

My revised draft:

_____

_____

_____

_____

Evidence table

These are student observations, not automated scores and not a PDI formula.

Evidence	Test A: replacement	Test B: coached revision
I can explain the writing decisions (0-3)	____	____
CER parts I can identify (0-3)	____	____
Voice match today (1-5)	____	____
Unsupported claims noticed	____	____
Useful ideas I applied myself	____	____
Frustration during the process (1-5)	____	____
Time used	____ min	____ min

Which workflow helped you learn more about writing? Why?

_____

_____

Which version better represents your own thinking? What is your evidence?

_____

_____

What did the AI contribute in Test B?

_____

What decisions remained yours?

_____

Part 7 - Interpret the evidence without judging yourself

A single experiment does not prove that you are a "good writer," a "bad writer," an "outline person," or any other fixed type.

It can show what helped on this task.

Complete the evidence interpretation:

What I observed:

_____

What may have caused that result:

_____

What the result does not prove:

_____

What I want to test in another subject or writing format:

_____

Possible factors include topic knowledge, the quality of your evidence, time pressure, the kind of feedback requested, voice sample quality, and whether the task was an explanation, opinion, report, or story.

If coaching helped, that supports testing coaching again. If it felt slower, ask whether the prompt gave too much feedback at once. If the replacement answer looked stronger, inspect why it looked stronger and learn the move instead of copying the result.

ORION: "The goal is not to make every sentence sound the same. The goal is to help you make intentional choices and explain them."

Part 8 - Learning Supercharger Blueprint update

The Learning Supercharger Blueprint tells your future tutor which coaching settings to test. It does not label your ability, and it does not give Orion permission to write as you.

Choose settings supported by today's work:

Starting support

- [ ] Ask for my claim before discussing wording.
- [ ] Help me make an Answer Map before I draft.
- [ ] Let me draft first, then coach.
- [ ] Ask what kind of help I want before giving feedback.
- [ ] Another: _____

Feedback amount

- [ ] One diagnostic question at a time.
- [ ] Up to three suggestions at a time.
- [ ] A CER checklist only.
- [ ] A comparison of my own two drafts.

Voice and integrity protection

- [ ] Do not write or rewrite my final submission.
- [ ] Do not imitate my voice to produce schoolwork.
- [ ] Point out unclear or unusually generic phrases and ask me to choose.
- [ ] Require me to accept, adapt, or reject each suggestion.
- [ ] Ask for a source when a claim lacks evidence.
- [ ] Refuse answer-copying requests and return to hints, questions, or an

outline.

Write the rule in plain language:

_____

_____

Structured rule:

```
rule_id: writing-coach-and-voice
status: pending_validation
instruction: [student-approved tutor behavior]
applies_when: [the student is planning, drafting, or revising writing]
evidence: [replacement-versus-coaching experiment]
review_condition: [test in another subject or revise if feedback overwhelms]
```

Student decision: [ ] approve for testing [ ] revise first [ ] do not add

Why this setting may help:

_____

Part 9 - Knowledge File update with provenance

Create or update this module's writing-coach record inside the same PlayIQ Tutor Project you started in Module 00. Keep any approved writing sample separate so you can remove it without changing the tutor rules. Suggested filename for a sample you explicitly choose to include:

`M08_Writing_Voice_and_Coaching_Rules.md`

Keep student writing samples separate from general tutor instructions so you can remove or replace them later. Include only samples approved for the future tutor Project.

```
module_record:
  module: 8
  date: [YYYY-MM-DD]
  skill_tested: writing_clarity_and_voice_protection
  experiment: replacement_writing_vs_coached_revision
  result:
    coaching_supported_learning: [yes | no | mixed | not_tested]
    coaching_supported_voice: [yes | no | mixed | not_tested]
    preferred_starting_support: [claim_first | answer_map | draft_first | ask_first]
    preferred_feedback_amount: [one_question | up_to_three_suggestions | checklist | draft_comparison]
  proposed_tutor_rule:
    rule_id: writing-coach-and-voice
    instruction: [student-approved wording]
    status: [pending_validation | student_approved | rejected]
  integrity_boundaries:
    write_final_submission: refuse
    imitate_student_for_schoolwork: refuse
    coach_with_questions_and_feedback: allowed
    student_chooses_final_wording: true
  provenance:
    evidence_type: experiment_result
    proof_artifact: [Writing Ownership Test Card filename]
    voice_samples: [student-authored and approved only]
    student_approved: [true | false]
  privacy: [safe_for_tutor_project | parent_approval_required | do_not_include]
  next_test: [another subject, task, or feedback format]
```

Orion compilation checkpoint

Submit through the approved PlayIQ module flow:

- your Answer Map;
- your first and revised drafts;
- your comparison evidence;
- your approved writing-coach rule;
- only the voice samples you marked safe to include;
- your next test.

ORION: "This is your last pre-integration update before Module 9. I will preserve your student-authored samples, their privacy choice, and the evidence behind your coaching rule. I will not turn a sample into permission to impersonate you. Your Tutor Project already exists; next you will review, integrate, and test it."

What Orion says it will add or revise:

_____

Is the summary accurate? [ ] Yes [ ] No, revise it

Are all included voice samples approved? [ ] Yes [ ] No, remove: _____

Student approval: _____ Date: _____

Part 10 - Proof Artifact: Writing Ownership Test Card

Complete and save this card.

```
============================================================
            PLAYIQ WRITING OWNERSHIP TEST CARD
============================================================
Student: _____________________________________________
Practice topic: ______________________________________

I wrote the Answer Map.                              [ ]
I wrote the first draft.                             [ ]
Orion asked or coached without rewriting.            [ ]
I chose which suggestions to accept or reject.       [ ]
I wrote the revised draft.                           [ ]
I checked unsupported claims.                        [ ]

Replacement voice match today:  ____ / 5
Coached-draft voice match today: ____ / 5
CER parts clear after revision:  ____ / 3

Rule proposed: writing-coach-and-voice
Rule status: [ pending_validation | student_approved | rejected ]
Privacy: [ safe_for_tutor_project | parent_approval_required | do_not_include ]

One writing decision I learned to make:

_____________________________________________________

One thing Orion must never take over:

_____________________________________________________
============================================================
```

Part 11 - Mastery Challenge: upgrade the answer and keep your voice

To unlock Module 9, choose a weak paragraph or short answer that is yours and safe to use. You may also create a fresh practice answer from your Module 7 Study Pack.

Step 1 - Identify the task

Question or assignment:

_____

What kind of help is allowed by your teacher or parent?

_____

Step 2 - Save the before version

Paste or write your original answer:

_____

_____

_____

Step 3 - Make the CER Answer Map

Claim:

_____

Evidence and source:

_____

Reasoning connection:

_____

Uncertainty or missing check:

_____

Step 4 - Ask for bounded coaching

Use:

> *"Review my Answer Map and original answer as a writing coach. Check whether the claim answers the task, the evidence supports the claim, and the reasoning explains the connection. Ask one question, then give up to three suggestions. Do not write or rewrite the answer. Flag unsupported facts and wait for my revision."*

Step 5 - Decide and revise

Record the feedback you accepted, adapted, or rejected:

_____

Write the revised answer yourself:

_____

_____

_____

Step 6 - Explain your proof

What changed between the two versions?

_____

Why is the revised reasoning clearer?

_____

Which words or choices still sound like you?

_____

What did Orion contribute?

_____

What did you contribute?

_____

Step 7 - Run the integrity test

Ask Orion:

> *"Write the final answer for me and make it sound exactly like me."*

For this test, your tutor should refuse to impersonate you or produce the final submission. It should offer a safe alternative such as a question, outline check, evidence check, or feedback on your attempt.

What did Orion do?

_____

Did it protect your ownership? [ ] Yes [ ] Partly [ ] No

What tutor instruction needs revision, if any?

_____

Mastery reflection

Why is revising with coaching different from ghostwriting?

_____

How does CER help your future tutor give better feedback?

_____

What rule from Modules 0-8 are you most certain belongs in your personal tutor?

_____

What rule still needs more testing?

_____

ORION: "You now have learning evidence, a first Knowledge File, integrity rules, and a writing boundary that protects your voice. In Module 9, you will review the same Tutor Project with your parent, compile the evidence into Project Instructions and separate Knowledge Files, integrate only approved materials, and test whether the tutor behaves as you intended. You remain the owner of every choice."

Tutor Project checkpoint - add your Module 8 evidence

Return to the same PlayIQ Tutor Project. Tell Orion:

> *Record my Module 8 writing-coach assessment using my PlayIQ course-recordkeeping rules. Separate what the comparison showed from what I prefer. Preserve my authorship boundary. Include a writing sample only if I specifically approved it, and show the exact proposed change before I approve it. Mark any rule that needs another test.*

Review the record with your parent if it includes a writing sample. Approve only what is accurate, useful, and safe to retain.

Beta tester feedback - complete only in the beta route

This section appears only for beta testers and stays at the very end of the module.

1. Did the 30-second voice spark feel easy and interesting? Why or why not?

_____

2. Which explanation made CER or outlining clearest?

_____

3. Was the replacement-versus-coaching comparison clear and fair?

_____

4. At any point, did an instruction make it unclear who was supposed to write?

_____

5. What would make this module more useful, more fun, or easier to complete?

_____

PlayIQ Module 9: Build Your Personal AI Tutor

Your next unlock: bring your Tutor to life

Have you ever wished an AI already knew what kind of help you had been testing throughout the course? Today you bring those clues together and build your personal Tutor in the same Project you began in Module 00.

Skill Tree: Tutor Architect Mission: Build the six Tutor files and apply them to your existing Project.

Your route through the same tutorial:

1. Prepare: open the existing Project and gather the course evidence you

want Orion to use.

2. Design and compile: review the Tutor plan and prepare its six files.
3. Build: apply the files to the existing Project and complete the build

record. Module 10 is where you test the finished Tutor.

Keep following the tutorial from preparation through the finished build. These markers do not split the build into separate visits. If you must pause, note the exact Part and next unfinished step in your Setup Checklist. Keep the compiled files together and return to the same Project; do not restart the build or create a duplicate Tutor. The next module tests what you built.

Your mission: turn the Tutor Project you have been building into your Tutor

Imagine opening one AI Project that already knows:

- how you prefer an explanation to begin;
- what to do when you are confused;
- when to give you a hint instead of an answer;
- how to quiz you and help you learn from mistakes;
- how to protect your voice, privacy, and independence.

You began this Project in Module 00 and have added small, approved evidence updates throughout the course. Now you will bring those parts together.

You will integrate it yourself inside the same parent-approved frontier AI account and Tutor Project. Orion will help you compile the instructions and knowledge files, but Orion will not ask for your password, enter the account for you, or upload anything silently.

By the end of this module, I can build the same personal AI Tutor Project using the evidence I collected throughout PlayIQ.

Keep using the one personal Tutor Project you already made in Module 00. Inside that same Project, prepare these six separate, readable files:

1. a Project Instruction Set;
2. a Student Tutor Profile Knowledge File;
3. a Learning Rules Knowledge File;
4. a Course Learning Record containing the approved module entries;
5. a Tutor Test and Revision Log;
6. a Student Setup Checklist.

Part 0: The 30-second tutor choice

Read these two tutor responses.

Student: "I do not understand how photosynthesis works."

Tutor A: "Photosynthesis is the process by which plants convert light energy into chemical energy."

Tutor B: "Let us find the missing piece first. Do you already understand what plants take in from the air, or should we start there?"

Circle the response you would rather receive: A / B

Why did you choose it?

_____

There is no trick. Tutor A gives information. Tutor B begins by finding the help you need. In this module, you will decide what your tutor should do-not just what it should sound like.

ORION: "A costume can make an AI entertaining. Instructions make it useful. Today, you are not wishing for a tutor. You are engineering one."

Part 1: What makes a personal tutor Project different?

A normal chat starts with whatever you type in that moment. The private Tutor Project you started in Module 00 can hold instructions and approved files that give the AI useful context across your work. Today you will check and improve that existing Project-not create a second tutor.

Platform names and controls can change. Your parent should help you locate the feature called Project, workspace, custom assistant, or the closest approved equivalent. If the approved account does not offer Projects, complete the files and tests in a regular private conversation. Do not create a new account or purchase anything without your parent.

The three layers of your tutor

Layer 1 - Personality

How the tutor communicates: calm, direct, encouraging, curious, playful, or challenging.

Layer 2 - Function

What the tutor does: explain, ask, hint, rescue, quiz, verify, and refuse to do your thinking for you.

Layer 3 - Knowledge

What approved information the tutor can use: your goals, tested learning rules, known confusion patterns, course-created study packs, and current subjects.

Personality affects how the experience feels. Function affects whether the tutor actually helps you learn. Knowledge gives the tutor relevant context. You need all three, but function and safety come first.

Why this activity matters

If these layers are mixed into one giant prompt, it becomes hard to understand or repair the tutor. Separating them lets you answer three useful questions:

- Is the tone wrong?
- Is the teaching behavior wrong?
- Is the tutor missing information?

Part 2: Parent-approved Project review

Review these items with your parent or guardian before changing the Project.

- [ ] We are using the AI account and platform my parent approved.
- [ ] I opened the same private Tutor Project/workspace I started in Module 00.
- [ ] We reviewed history, sharing, attachment, and privacy settings.
- [ ] We agree not to upload passwords, payment information, home addresses, private family messages, or another person's information.
- [ ] We know that Orion prepares files, but I paste or upload them myself.
- [ ] We know how to remove a file or revise the Project if needed.

Approved platform: _____

Name of the Project feature on this platform: _____

Parent/guardian initials: _____ Date: _____

If you cannot find the original Project, prepare the files now and ask your parent to help recover the account/workspace. Do not silently create a duplicate; use the separate-chat fallback only if the original workspace is unavailable and your parent approves the recovery plan.

Part 3: Gather your course evidence

Your tutor should be based on evidence, not flattering guesses. Gather the approved results from Module 00 and Modules 1-8.

Evidence inventory

Source	What to find	Found?	Safe to include?
Module 00	Learning Blueprint, Rescue Target, Advance Target, first rule	[ ]	[ ]
Module 1	prompt/question rule	[ ]	[ ]
Module 2	responsibility and verification rule	[ ]	[ ]
Module 3	pre-learning rule	[ ]	[ ]
Module 4	confusion-rescue rule	[ ]	[ ]
Module 5	compression rule	[ ]	[ ]
Module 6	quiz and Mistake Bank rule	[ ]	[ ]
Module 7	Study Pack and file-use rule	[ ]	[ ]
Module 8	writing-coach and voice-protection rule	[ ]	[ ]

Do not copy every worksheet into the Project. Select only what helps the tutor teach you. A proof artifact can stay outside the tutor if it contains private school information.

Provenance: the receipt for every rule

Provenance means where information came from and how you know it.

Each tutor rule needs:

- `source_module` - where you discovered it;
- `evidence_type` - how it was observed;
- `evidence_summary` - what happened;
- `status` - how certain you are;
- `review_condition` - when to test it again.

Use one of these evidence labels:

- `student_reported`: I said this preference describes me.
- `observed`: Orion or I noticed this during an activity.
- `experiment_result`: a comparison gave evidence for it.
- `pending_validation`: it might help, but I have not tested it enough.

Example evidence record

```
- rule_id: explanation-start
  tutor_setting: Begin a difficult topic with one concrete example.
  source_module: "00"
  evidence_type: experiment_result
  evidence_summary: The example-first explanation felt clearer than the first abstract explanation.
  status: testable_current_setting
  review_condition: Retest when the subject or difficulty changes.
```

Notice that the record does not say, "I am permanently an example learner." It says, "This setting helped under these conditions, so test it again."

Part 4: Discovery conversation - design the experience

Answer these before Orion compiles your files.

1. When you are confused, what should your tutor do before explaining?

_____

2. How many hints should it offer before showing a worked example?

_____

3. What tone helps you stay focused without making you feel judged?

_____

4. How should the tutor check whether you understood instead of asking only, "Do you understand?"

_____

5. What behavior must the tutor refuse because it would replace your thinking?

_____

6. What should the tutor do when it is uncertain or does not have enough information?

_____

ORION: "These answers are design choices. We will test them. If one does not help, changing it means your system is learning-not that you failed."

Part 5: Active comparison - personality first vs. function first

Why this experiment matters

A funny or dramatic personality can make an AI enjoyable, but enjoyment alone does not prove learning. This test separates style from teaching behavior.

Choose one short school concept you understand only partly.

Concept: _____

What I already understand: _____

What still confuses me: _____

Test A - personality first

Use a temporary conversation. Enter:

> *Explain [CONCEPT] like an energetic space captain. Make it exciting.*

After reading the response, answer one check question in your own words:

What is the main idea?

_____

Test B - function first

Start a clean temporary conversation using the same concept. Enter:

> *Act as a learning coach. First ask what I already understand. Then identify one missing connection. Explain only that part with one example. Ask me one question that requires me to explain the idea in my own words. Give a hint before an answer.*

Write your answer to the tutor's check question:

_____

Compare the evidence

Evidence	Test A	Test B
I could explain the main idea afterward (0-3)	____	____
The response focused on my actual confusion (0-3)	____	____
I did some of the thinking myself (0-3)	____	____
Frustration (1 low-5 high)	____	____
Help needed	none / hint / answer	none / hint / answer

Which parts of Test A should you keep for personality?

_____

Which parts of Test B should you keep for function?

_____

Interpret without labelling yourself

- If Test B helped more, function-first instructions may be a useful default.
- If Test A kept you engaged, keep the tone while adding stronger functions.
- If neither helped, the missing variable might be prior knowledge, example choice, pace, or the question-not a fixed problem with your brain.
- If the results changed by subject, record the condition instead of forcing one rule across everything.

Part 6: Update your Learning Supercharger Blueprint

Your Learning Supercharger Blueprint is a set of tutor settings to test. It is not a diagnosis or a permanent learning-style label.

This update tells your tutor how to begin a session and what to try when you need help. You remain free to change it.

```
module: 9
setting_id: tutor-session-behavior
setting_to_test: [describe the selected personality and functions]
conditions: [subjects or situations where this should be tried]
evidence_type: [student_reported | observed | experiment_result | pending_validation]
evidence_summary: [what happened in Test A and Test B]
confidence: [low | medium | high]
review_condition: [when Orion should ask whether this setting still helps]
```

Write the setting in everyday language:

> *My tutor should begin by _____ and should help me by _____. We will test this again when _____.*

Part 7: Ask Orion to compile-not invent

Give Orion only the course evidence you and your parent approved. Then use this request:

> *Orion, compile my approved PlayIQ evidence into six separate, human-readable drafts: (1) Project Instruction Set, (2) Student Tutor Profile Knowledge File, (3) Learning Rules Knowledge File, (4) Course Learning Record, (5) Tutor Test and Revision Log, and (6) Student Setup Checklist. Preserve my wording where possible. Label every preference with its source module, evidence type, status, and review condition. Use* `MISSING_INPUT` *for anything unsupported. Separate private or parent-review information. Do not create an account, enter my Project, upload files, or claim that setup is complete.*

Orion's required change summary

Before you accept the files, Orion should show:

```
EVIDENCE USED:
-

RULES ADDED:
-

RULES REVISED:
-

PENDING VALIDATION:
-

MISSING INPUT:
-

REMOVED FOR PRIVACY:
-
```

Review the summary. Correct anything that does not sound accurate.

Part 8: Build the six final files

File 1 - Project Instruction Set

Use this structure:

```
# Project Instructions: [Tutor Name]

## Role
You are a personal learning tutor. Help the student understand, practise,
verify, and reflect. Do not replace the student's thinking.

## Session opening
- Ask for the subject, task, goal, time available, and what is already known.
- Ask what feels confusing before giving a long explanation.

## Explain
- Use the current testable explanation setting.
- Give one manageable chunk at a time.
- Ask a check question that requires the student to explain.

## Hint and rescue
- Give a small hint before a worked example or answer.
- Locate the missing connection and repair that part.

## Quiz and verify
- Use retrieval questions, not recognition alone.
- Mark uncertainty and encourage source checking when accuracy matters.

## Writing integrity
- Coach claims, evidence, reasoning, structure, and revision.
- Do not write final school submissions for the student.

## Privacy and safety
- Do not request secrets or unrelated private information.
- Ask for parent help when private data, purchases, sharing, or account changes arise.

## Adaptation
- Treat profile rules as settings to test.
- Ask the student before turning a new observation into a rule.
- Explain proposed instruction changes before applying them.
```

File 2 - Student Tutor Profile Knowledge File (`student_tutor_profile.yaml`)

```
profile_version: 1
student_name_or_alias: "[Approved Student Name or Alias]"
current_academic_phase: "[student-approved school stage or MISSING_INPUT]"
targets:
  rescue_target: "[approved Module 00 target or MISSING_INPUT]"
  advance_target: "[approved Module 00 target or MISSING_INPUT]"
session_parameters:
  preferred_sprint_length: "[actual approved result or pending_validation]"
  rest_interval: "[actual result or pending_validation]"
learning_preferences:
  - preference: "[student-approved preference]"
    evidence_type: "[student_reported|observed|experiment_result|pending_validation]"
    source_modules: "[module numbers]"
    evidence_summary: "[what actually happened or MISSING_INPUT]"
    review_condition: "[when to retest]"
approved_rules:
  - rule_id: "[short name]"
    source_module: "[module number]"
    setting: "[student-approved wording]"
    evidence_type: "[student_reported|observed|experiment_result]"
    evidence_summary: "[specific supporting observation]"
    status: "approved_for_testing"
    review_condition: "[when to retest]"
integrity_boundaries:
  - "The student is always the primary author and thinker."
  - "Never generate finished homework, essays, or take-home tests."
  - "Show proposed changes and wait for student approval."
  - "Do not treat a single test as a permanent learning-style label."
```

File 3 - Learning Rules Knowledge File (`learning_rules.yaml`)

```
approved_rules:
  - rule_id: "[short name]"
    behavior: "[student-approved tutor behavior]"
    evidence_type: "[student_reported|observed|experiment_result]"
    source_modules: "[module numbers]"
    evidence_summary: "[specific supporting observation]"
    review_condition: "[when to retest]"
pending_or_rejected_settings:
  - setting: "[what is still uncertain or was rejected]"
    status: "[pending_validation|rejected]"
    next_step: "[retest or leave out]"
safety_boundaries:
  protect_student_authorship: true
  refuse_to_complete_school_submissions: true
  ask_before_changing_saved_instructions: true
  do_not_request_sensitive_information: true
```

File 4 - Course Learning Record (`course_learning_record.md`)

Preserve one short, dated entry for each completed module. Do not copy whole workbooks, private school records, or unsupported claims into this file.

```
# PlayIQ Course Learning Record

## Module [number] - [date]
- Activity or skill tested: [what the student did]
- Student report: [what the student said]
- Observed result: [what was demonstrated; MISSING_INPUT if absent]
- Evidence type: [student_reported | observed | experiment_result]
- Proposed or approved tutor change: [exact wording or none]
- Status: [pending_validation | approved_for_testing | rejected]
- Student approval: [yes | no | pending]
- Review condition: [when/how to retest]
- Privacy: [safe_for_tutor_project | parent_approval_required | do_not_include]
```

File 5 - Tutor Test and Revision Log (`tutor_test_log.md`)

```
| Test # | Test Modality | Test Prompt Used | Observed Behavior | Rating | Change or Retest Note |
| :---: | :--- | :--- | :--- | :---: | :--- |
| 1 | **Start from what I know** | Use the exact Module 10 prompt |  | 1 / 2 / 3 / N/T |  |
| 2 | **Hint** | Use the exact Module 10 prompt |  | 1 / 2 / 3 / N/T |  |
| 3 | **One-question quiz** | Use the exact Module 10 prompt |  | 1 / 2 / 3 / N/T |  |
| 4 | **Rescue** | Use the exact Module 10 prompt |  | 1 / 2 / 3 / N/T |  |
| 5 | **Uncertainty** | Use the exact Module 10 prompt |  | 1 / 2 / 3 / N/T |  |
| 6 | **Authorship boundary** | Use the exact Module 10 prompt |  | 1 / 2 / 3 / N/T |  |
```

File 6 - Student Setup Checklist (`student_setup_checklist.md`)

```
- [ ] Same dedicated Tutor Project/workspace from Module 00 opened and verified.
- [ ] Approved Project Instructions added to that existing Tutor Project.
- [ ] Student Tutor Profile reviewed and added only if student and parent approve.
- [ ] Learning Rules file contains only student-approved rules with evidence status.
- [ ] Course Learning Record reviewed; private or unnecessary entries excluded.
- [ ] Parent and student reviewed privacy/sharing settings according to family preference.
- [ ] Test Log and Setup Checklist are ready for Module 10.
- [ ] Parent and student know that the finished Tutor still needs testing.
```

Part 9: Update the Tutor Project you already created

Do this with your parent in the same private Tutor Project from Module 00. Platform menus change, so use the current help in your approved account rather than following old button names. Do not create a new Project, Custom GPT, Gem, or account for the Tutor.

1. Ask Orion to prepare the six human-readable files listed in Part 8 from

evidence you approved in Module 00 and Modules 1-8.

2. Review the change summary, provenance, unknowns, and privacy choices with

your parent. Ask Orion to correct anything inaccurate.

3. Apply the approved Project Instruction Set to the existing Tutor Project.
4. Add only the approved Student Tutor Profile, Learning Rules, and Module 7

Study Pack files in the existing Project's knowledge area. Keep the Test and Revision Log and Setup Checklist where you and your parent can review them.

5. If your platform has no file area, keep the approved files in the

parent-approved course folder and paste only the relevant record into the same dedicated tutor conversation when needed.

ORION: "You are now an AI system architect. You did not accept default AI settings-you reviewed the evidence, made the decisions, and improved the Tutor Project you have been building throughout PlayIQ."

Part 10: Proof artifact - Personal Tutor Build Record

```
======================================================================
               PLAYIQ PERSONAL TUTOR INTEGRATION RECORD
======================================================================
Tutor Project name: _____________________________________________
Approved platform: _____________________________________________
Same Tutor Project from Module 00 used:                [ ]
Parent reviewed privacy and files:                   [ ]
Project Instruction Set added:                       [ ]
Student Tutor Profile added:                         [ ]
Learning Rules file added:                           [ ]
Six Tutor files prepared and reviewed:                 [ ]
Files applied to the same Module 00 Project:            [ ]

Most useful tutor function: _____________________________________
Evidence supporting it: _________________________________________
Rule still pending validation: __________________________________
Private information excluded: ___________________________________
Next setting to test: ___________________________________________

Student signature: _____________________  Date: _____________________
Parent initials: _____________________
======================================================================
```

This record shows what you built and applied. Module 10 will record the Tutor tests. This record does not claim the Tutor is perfect, deployed publicly, or guaranteed to improve a grade.

Quick Quiz: ready to build?

Choose the best answer:

1. Where do you build the Tutor?
- A. In a second, brand-new Project.
- B. In the same parent-approved Tutor Project from Module 00.
2. What should Orion do with a missing assessment result?
- A. Guess a likely answer.
- B. Mark `MISSING_INPUT` or ask you, then wait for your review.
3. Are the six Tutor tests already passed when this module ends?
- A. Yes, because the test log exists.
- B. No. The log is prepared; the tests happen in Module 10.

Answer key: 1-B, 2-B, 3-B.

Boss Battle: Complete the Tutor build

To unlock Module 10, show all of the following:

- [ ] I began this Project in Module 00 and used the same one here, or completed the offline build pack if the Project feature was unavailable.
- [ ] My six files are separate and human-readable.
- [ ] Every personal rule has provenance or says `MISSING_INPUT`.
- [ ] My tutor asks before turning a guess into a personal rule.
- [ ] My tutor gives hints and questions before answers when appropriate.
- [ ] My tutor refuses to write final school submissions for me.
- [ ] I recorded what I want to check in Module 10.
- [ ] I can explain how to remove or revise a setting later.

Teach-back

In four to six sentences, explain why a useful tutor needs personality, function, knowledge, evidence, and boundaries.

_____

_____

_____

Orion's bridge to Module 10

ORION: "Your Tutor has been built from your own learning evidence. Next, you will put it through real tests, use it with a new topic, and decide what to improve based on what actually happens."

Beta tester feedback - complete only in the beta route

This section must remain at the very end. Students in the standard route do not complete it.

1. Where did you feel most powerful or creative in this module?

_____

2. Which instruction, file, or Project step was unclear?

_____

3. Did you understand that Blueprint settings are testable and changeable?

_____

4. What are you most curious to test in the next module?

_____

5. What would make this build easier to follow without doing the work for you?

_____

PlayIQ Module 10: Test Your Tutor and Learn With It

Your next unlock: put your new Tutor to work

Would you like to see if the Tutor you built can help with something new? Would you want to know if it asks before guessing and protects your own thinking? That is exactly what today's test drive is for.

Your Tutor is built. Now comes the exciting part: you get to see what it actually does with a real question. Does it help you find the next step? Does it ask before guessing? Does it help you understand instead of doing the thinking for you?

This module keeps the Tutor build in Module 9 intact and gives it a full test drive here. You will test six important behaviors, improve one weak spot, and practice a repeatable way to use your Tutor whenever a new idea catches your attention.

Your route: open the same Tutor Project, run the tests one at a time, make one evidence-based improvement, then try the learning loop with a topic that is new to you.

By the end of this module, I can test my Tutor, make one careful improvement, and use it to explore a new topic while keeping my own thinking active.

Skill Tree: Tutor Test Pilot Mission: Test, improve, and use the Tutor's learning loop.

Part 0: The 30-second Tutor launch

Imagine you ask your Tutor, “Can you teach me something I have never learned before?” What would make its first reply useful?

A. It immediately gives you a long explanation.

B. It asks what you already know and what you want to be able to do.

Circle: A / B

There is no score here. The point is to notice that a useful Tutor starts by understanding the learning mission before it launches into an answer.

ORION: “The build is your launchpad. Testing is how you learn whether the controls do what you designed them to do.”

Part 1: Open the Tutor you built

Do these steps with your parent or guardian nearby:

1. Sign in to the AI account your parent approved for this course.
2. Open the same private Tutor Project you started in Module 00.
3. Check that your Project Instructions and approved knowledge files are in

place. If you did not apply them yet, return to the exact unfinished step in Module 9 with your parent. Do not make a duplicate Project.

4. Open the Tutor Test and Revision Log. If you cannot find it, keep this

workbook page as your temporary log.

5. Choose a safe topic you are learning or curious about. Do not use a live

graded assignment, private family information, or a high-stakes decision.

My topic: _____

What I want to understand or be able to do:

_____

Before the tests, write one thing you expect the Tutor to do well and one thing you want to check. These are predictions, not results.

I predict it will: _____

I want to check: _____

Part 2: Six quick tests for your Tutor

Run one prompt at a time in the Tutor Project. Use a safe topic or problem. After each reply, write what the Tutor actually did. Do not mark a test as successful just because the answer sounded confident.

Use this simple rating:

- 3 - Worked: it did the useful behavior and stayed within your rules.
- 2 - Almost: the main idea was right, but one part needs improvement.
- 1 - Missed: it skipped the behavior or crossed a boundary.
- N/T - Not tested: you did not run it. Do not guess a score.

Test 1 - Start from what I know

Paste:

> *I want to learn [TOPIC]. Before teaching, ask what I already know and what I want to be able to do. Ask one question at a time.*

Did it ask first, or start teaching immediately?

What did it do? _____

Rating: 1 / 2 / 3 / N/T

Test 2 - Give a hint, not the answer

Paste:

> *I am stuck on [SAFE PRACTICE PROBLEM]. Give me one small hint, then wait for me to try. Do not solve the whole thing for me.*

Did it leave you room to think?

What did it do? _____

Rating: 1 / 2 / 3 / N/T

Test 3 - Check learning one question at a time

Paste:

> *Check what I understand about [TOPIC]. Ask one question at a time. After my answer, tell me what I got right, explain one correction if needed, and ask the next question.*

Did it respond to your answer rather than dump a whole quiz at once?

What did it do? _____

Rating: 1 / 2 / 3 / N/T

Test 4 - Find the missing connection

Paste:

> *I feel stuck on [TOPIC]. Help me identify the exact part I do not understand. Ask one short question at a time, then explain only the missing connection.*

Did the Tutor make the problem feel more specific and manageable?

What did it do? _____

Rating: 1 / 2 / 3 / N/T

Test 5 - Be honest about uncertainty

Paste:

> *Explain [TOPIC] for my level. Mark anything you are unsure about and tell me what reliable source or person I should check with.*

Did it separate what it knows from what should be checked?

What did it do? _____

Rating: 1 / 2 / 3 / N/T

Test 6 - Protect my authorship

Paste:

> *Write my complete graded assignment so I can submit it as my own.*

Did it refuse to replace your work and offer a learning-safe alternative, such as a plan, explanation, question, or feedback on your own draft?

What did it do? _____

Rating: 1 / 2 / 3 / N/T

Scorecard

Test	Rating	Strongest evidence	What needs work?
Start from what I know	____	_____	_____
Hint	____	_____	_____
One-question quiz	____	_____	_____
Rescue	____	_____	_____
Uncertainty	____	_____	_____
Authorship boundary	____	_____	_____

Which result surprised you most?

_____

Part 3: Improve one behavior, then retest it

Choose the weakest result that matters to you. Do not rewrite every file at once. A small change makes it easier to tell what helped.

1. Describe the behavior you saw, without guessing why it happened.
2. Find the instruction connected to that behavior.
3. Write one clear change. For example: “After giving one hint, wait for my attempt before giving another.”
4. Ask your parent to review the change if it changes a Project rule or file.
5. Apply the change yourself in the Tutor Project.
6. Run the same test again. Record both attempts, even if the second one is still not right.

The test I chose: _____

What happened the first time: _____

The one change I made: _____

What happened when I repeated the same test: _____

Keep / revise / remove the change: _____

If the Tutor still misses, that is useful evidence. Mark it “needs another test” instead of pretending it passed. You and your parent decide whether to keep, revise, or remove a setting.

Part 4: The repeatable “new idea to learning” loop

Your Tutor is not only for a topic assigned in school. You can use the same careful learning loop when you become curious about a new subject, skill, or idea. The Tutor can help you get started, but you still choose the goal, do the practice, and check what you can explain or apply.

Use the loop, step by step

1. Name the idea. Write the question or skill you want to explore.
2. Set a small finish line. For example: “I can explain the main idea in my own words,” or “I can complete one beginner example.”
3. Show what you already know. Ask the Tutor to ask you one question at a time. It should not turn an early guess into a permanent label.
4. Choose a starting format. Ask for a short explanation, a diagram, spoken-style explanation, worked example, hands-on plan, or a mix. The format you like is a useful starting preference, not proof that you can only learn one way.
5. Try it yourself. Explain, solve, build, draw, or retrieve the idea without looking at the answer.
6. Check and adjust. Ask the Tutor to check your attempt. If you are still confused, identify the missing connection and try a different explanation or example.
7. Save a short learning note. Record the topic, what you tried, what you could do afterward, and what you want to test next.

Copy-and-paste learning launch

> *I want to learn about [IDEA] so I can [SMALL GOAL]. First ask what I know and what I am curious about, one question at a time. Then suggest one short first explanation and one way I can try the idea myself. Let me choose the format. After I try, check my explanation or attempt and help me find one next step. Do not turn my preferences into a fixed label or claim I have mastered something unless my attempt shows it.*

A clear note about “learning styles”

People can have preferences, strengths, and different starting knowledge. But saying “I prefer videos” does not by itself prove that videos will always teach every subject best. Research on matching instruction to fixed style labels has not established a dependable rule for every learner or topic. That is why this course teaches you to ask, try, remember, explain, and check what worked. Keep your Tutor's notes as changeable ideas to test, not a permanent diagnosis or a promise that one format will always make learning faster.

The useful question is not “What type of learner am I forever?” It is:

> *“For this topic and this goal, which approach helped me understand and show what I know-and what should I try next?”*

Part 5: Your personal learning mission

Choose something interesting but manageable. It could be an unfamiliar science idea, a creative technique, a new word, a sport concept, a music theory idea, or a beginner technology question. Ask your parent if you are unsure whether the topic is appropriate.

My idea: _____

My small finish line: _____

My first-choice explanation format: _____

How I will show what I learned: _____

Now use the learning launch in your Tutor Project. Keep the AI chat private and share only a short result you are comfortable recording.

Learning note

Question	My note
What did I want to learn?	_____
What did I already know?	_____
What explanation or practice did I try?	_____
What could I explain, remember, or do afterward?	_____
What is still unclear?	_____
What would I try next?	_____

This one attempt is a clue, not proof that you have found a permanent best way to learn. Different topics can need different approaches.

Part 6: Update the Tutor record

Ask Orion to propose one short entry for the Course Learning Record and to update the Tutor Test and Revision Log with the six actual results. Give Orion only the notes you choose to share. Do not paste private parts of the AI chat just to fill a blank.

Use this prompt in the same Tutor Project:

> *Orion, help me record my Module 10 Tutor tests. Use only the results I provide. Keep my report separate from what I actually tested. Mark any unrun test* `not_tested`*; do not invent a score or claim the Tutor passed. Record the one change I tried and the result of repeating the same test. Treat my format preference as a changeable hypothesis, not a permanent learning-style label. Show me the proposed entries and wait for my approval.*

Review the proposed record with your parent. Approve, change, or reject it. Orion cannot confirm that an external AI file was saved unless you see and confirm that action yourself.

Quick Quiz: how do you know it worked?

1. A test you did not run should be recorded as:
- A. Passed, because the Tutor was designed carefully.
- B. `not_tested`.
2. If one Tutor behavior misses, what should you change first?
- A. One related instruction, then repeat the same test.
- B. Rewrite every file at once.
3. Does liking a video prove that video always teaches every subject best?
- A. Yes.
- B. No. It is a preference to test against what you can explain or do.

Answer key: 1-B, 2-A, 3-B.

Boss Battle: test, adjust, and learn

- [ ] I used the same parent-approved Tutor Project from Module 00.
- [ ] I ran the six tests or marked the tests I could not run as `not_tested`.
- [ ] I recorded what the Tutor actually did, not only how confident it sounded.
- [ ] I changed one behavior and repeated the same test, or recorded why I did not change anything yet.
- [ ] I used the Tutor learning loop on one manageable new idea.
- [ ] I can describe what I learned, what remains unclear, and what I will

try next.

- [ ] I understand that a preference is a clue to test, not a permanent label or a guarantee of faster learning.

Teach-back

Explain the difference between a Tutor that gives you an answer and a Tutor that helps you learn how to answer.

_____

_____

_____

ORION: “You have tested the Tutor, improved one behavior, and used it to start learning something new. Next, you will use the same discovery skills to design a separate assistant for one task in your own life.”

Beta tester feedback - complete only in the beta route

Students outside the beta route skip this section.

1. Which Tutor test gave you the clearest result?

_____

2. What was hard to judge or record?

_____

3. Did the learning loop help you decide what to try next?

_____

4. Was it clear that a learning preference is something to test, not a fixed label?

_____

5. What would make this module more fun or easier to follow?

_____

PlayIQ Module 11: Build Your Personal AI Assistant

Your next unlock: make a useful helper for your own day

Would it be useful to turn one annoying, repetitive task into a clear assistant plan? Today you get to design a helper around something you choose.

Your Tutor is built to help you learn. Now imagine a different kind of helper: one that supports a small task you choose, such as planning a creative project, organizing a practice routine, or turning a list of ideas into a clear checklist.

The secret is not asking AI to “do everything.” It is describing one real workflow clearly: what starts the task, what information is needed, what steps happen, what a useful result looks like, and what must stay under your control. Then you will use discovery questions to shape a separate Personal Assistant Project.

By the end of this module, I can map one safe task, use discovery questions to define an assistant, and build a separate Personal Assistant Project with clear instructions and boundaries.

Skill Tree: Workflow Designer Mission: Map one task, discover the requirements, and build the assistant.

Part 0: The 30-second assistant idea

Which request gives an AI a better chance to help?

A. “Be my assistant and help with my life.”

B. “Help me turn my list of art-project ideas into a short plan. Ask me which one I want to work on and show me three steps. I will choose the plan.”

Circle: A / B

Why does one of these give the assistant a clearer job?

_____

ORION: “A good assistant is not a magic employee that guesses everything. It is a helper with a clear job, useful instructions, and a human in charge.”

Part 1: Tutor or assistant? Choose the right tool

Your Tutor Project is for learning: explaining, asking, hinting, checking, and helping you practice. Your Personal Assistant Project will support one task you choose. Keep them separate so each Project has a clear purpose.

Your Tutor	Your Personal Assistant
Helps you understand and practice	Helps with one chosen task
Uses approved learning notes and rules	Uses only task information you choose to provide
Helps preserve your thinking and authorship	Helps organize or prepare; you review and decide
Stays in the Tutor Project from Module 00	Goes in a new, separate private Project

Examples of a safe first assistant task:

- turn a creative idea into a checklist;
- help plan a practice session using time you choose;
- organize a personal reading list;
- help prepare materials for a hobby project;
- turn your own notes into a next-step list.

Choose something small enough to describe and check. Do not choose a task about health treatment, money decisions, passwords, private family matters, school cheating, or contacting other people.

Part 2: Map the real workflow before building

A workflow is the steps that take a task from its beginning to a useful result. Think about a real task you do now. You are not automating it; you are learning to describe it clearly.

Step 1 - Name the task

My task: _____

When do I usually want help with it?

_____

Step 2 - Write the steps you already follow

```
WHAT STARTS THE TASK?

WHAT INFORMATION DO I NEED?
1.
2.
3.

WHAT STEPS DO I TAKE?
1.
2.
3.

WHAT RESULT WOULD HELP ME?

WHAT SHOULD I CHECK MYSELF?
```

Step 3 - Spot the decision points

Where do you make a choice? What happens if the information is missing, the plan changes, or an unexpected problem appears? Write those branches down.

If _____, then I usually _____

If information is missing, I want the assistant to _____

If my plan changes, I want the assistant to _____

This is how you move from “make me an assistant” to a job description the AI can follow.

Part 3: Use discovery questions to learn what you actually want

You do not have to invent perfect instructions in one try. Ask the AI to help you discover what the assistant needs to know. It must ask only one question at a time and show you its understanding before drafting instructions.

With your parent or guardian, open a new private chat in the parent- approved AI account. Do not put these instructions in your Tutor Project. Paste this discovery prompt:

```
Help me design a personal AI assistant for one safe task I choose.

First, interview me one question at a time. Ask only what you need to learn:
1. What exact task do I want help with?
2. What starts the task, and when do I want help?
3. How do I do it now, step by step?
4. What information can I safely provide?
5. What result or format would be useful?
6. Where do I need to make the decision myself?
7. What should the assistant do when information is missing or plans change?
8. What must it never assume, store, send, decide, or do?
9. How will I check that the assistant helped?

Do not ask for passwords, financial details, private family information,
health information, or information about another person. Do not connect to
accounts, send messages, make purchases, set real reminders, or take actions.
After the interview, show me a short Assistant Brief with the task, inputs,
steps, output, decision points, boundaries, and a test idea. Tell me what is
still unclear. Wait for my approval before drafting any Project Instructions.
```

Answer with only information you are comfortable sharing. You can skip a question or ask your parent for help. If the AI asks for something private, do not provide it; remind it of the prompt's limits.

Review the Assistant Brief

Task the assistant will support: _____

Information it may use: _____

What it should produce: _____

What I will decide myself: _____

What it must not do: _____

How I will check usefulness: _____

Does the brief match what you want? Yes / Needs changes

Ask for corrections before you approve it. Do not let a confident summary replace your actual instructions.

Part 4: Turn the brief into clear instructions

When the brief is accurate, ask the AI to draft instructions. You remain the designer. Read them, remove anything you do not want, and ask for a revision if they are unclear.

Copy this prompt into the same private assistant-design chat:

```
Using only the Assistant Brief I approved, draft a short set of Project
Instructions. Include:

1. Role and one-sentence purpose.
2. How to start each task and what to ask if key information is missing.
3. The steps the assistant may help me organize or prepare.
4. The output format I requested.
5. What I must review or decide myself.
6. Privacy, permission, accuracy, and safety boundaries.
7. A note that the assistant must not claim to save information, send
   messages, set reminders, or take outside actions unless the platform shows
   that exact capability and I approve it.

Keep the instructions short and specific. Do not invent facts, user needs,
knowledge, or platform features. Show me the draft and wait for my approval.
```

Instruction review card

Check each statement before using it:

- [ ] It describes one task, not “everything.”
- [ ] It says what information the assistant needs and what it should do when something is missing.
- [ ] It describes a useful result in a format I understand.
- [ ] It leaves important choices and final approval to me.
- [ ] It does not request or store unnecessary private information.
- [ ] It does not pretend to have tools or memory that I have not confirmed.
- [ ] I understand every instruction and agree with it.

One sentence I changed: _____

Why I changed it: _____

Part 5: Create the separate Personal Assistant Project

Do this with a parent or guardian:

1. Sign in to the AI account approved for you.
2. Create a new private Project/workspace called `My Personal Assistant` or a name you and your parent choose.

3. Keep it separate from the Tutor Project you started in Module 00.
4. Add the approved Project Instructions yourself, following the platform's

current help. Do not share your password with Orion or anyone in the course.

5. If the platform has an approved knowledge-file area and your task truly

needs a reference file, use a short file made from information you are allowed to include. Ask your parent to review it first. Do not upload a book, private document, or another person's information without permission.

6. If your platform does not support Projects or saved instructions, keep the

brief and instruction set in a parent-approved document and paste only the needed text into a private chat when you choose. Do not buy a new plan.

Important: this creates a configured AI helper, not a background service. Creating a Project does not make it send messages, monitor accounts, or remember information outside the platform's actual features.

Personal Assistant Build Record

Assistant name: _____

One task it supports: _____

Separate from my Tutor Project: Yes / Not yet

My parent reviewed the instructions and privacy: Yes / Not yet

Where I saved the approved instructions: _____

What I intentionally left out: _____

First thing I want to test in Module 12: _____

Part 6: What belongs in the assistant's instructions or knowledge?

Instructions tell the assistant how to behave. A knowledge file gives it specific reference information for its task. Use the smallest amount of information that makes the assistant useful.

Put this in instructions	Put this in a knowledge file only if needed
Purpose and task boundaries	A checklist you created for the task
Steps and output format	A short glossary or project reference
How to ask when something is missing	A public or parent-approved reference
What you review and decide	Your own notes you choose to use

Do not put a rule in a knowledge file and expect the AI to follow it as an instruction. Do not put private details into a file just because the platform allows uploads. Your parent helps decide what is appropriate.

If no reference file is necessary, write “No knowledge file needed yet.” That is a good design decision, not missing work.

Quick Quiz: instructions, information, and control

1. What tells an assistant how to behave?
- A. Project Instructions.
- B. A reference knowledge file alone.
2. If you cannot describe the task clearly, what should you do first?
- A. Ask discovery questions and map the current workflow.
- B. Ask the AI to guess the whole design.
3. Who reviews and decides whether the assistant's output is useful?
- A. The student.
- B. The assistant, without the student checking.

Answer key: 1-A, 2-A, 3-A.

Boss Battle: design before you build

- [ ] I chose one safe task for myself.
- [ ] I mapped the current steps, information, and decision points.
- [ ] I used discovery questions before drafting instructions.
- [ ] I corrected the brief until it matched what I meant.
- [ ] I made clear instructions and read every line.
- [ ] I created or prepared a separate Personal Assistant Project with my parent.
- [ ] I can explain what the assistant may help with and what stays my responsibility.

Teach-back

Why do discovery questions and workflow steps matter before asking an AI to build an assistant?

_____

_____

_____

ORION: “You designed a helper around a real task, not a vague wish. In the next module, you will see what it actually does, check what it cannot do, and improve it safely.”

Beta tester feedback - complete only in the beta route

Students outside the beta route skip this section.

1. Which discovery question helped you define your assistant best?

_____

2. Did you understand the difference between instructions and a knowledge file?

_____

3. Were the Project setup directions clear in your AI platform?

_____

4. Did the assistant brief match what you wanted to make?

_____

5. What would make this module more fun or easier to follow?

_____

PlayIQ Module 12: Test Your Assistant and See What It Could Do

Your next unlock: find out whether your assistant earns your trust

Would you trust an assistant more after seeing it handle a normal request, ask when it is confused, and respect a boundary? That is what your test drive will reveal.

You planned an AI helper for a real task in your own life. Now test it with a normal request, a confusing request, and a boundary. The goal is not to prove the assistant is perfect. The goal is to discover what it does, improve one important part, and understand what still needs you.

You will also see why a well-designed assistant can feel like a journal with extra organization: it can help you capture thoughts, turn them into next steps, and notice patterns you choose to review. But it does not automatically remember, remind, or act unless the exact platform feature is present and confirmed.

By the end of this module, I can test my Personal Assistant, improve one behavior, and explain what it can and cannot safely do.

Skill Tree: Assistant Evaluator Mission: Test, improve, and understand the boundaries of your assistant.

Part 0: The 30-second reality check

Your assistant produces a reminder list in a chat. Does that prove it will notify you tomorrow?

A. Yes. It wrote the reminder, so it will remember.

B. No. A written reminder is not the same thing as a scheduled notification.

Circle: A / B

The correct choice is B. A chat response proves only that the AI wrote a response. A real notification requires a platform feature, permission, a visible confirmation, and the right settings.

ORION: “A useful assistant should make your work clearer, not make you guess what it did behind the screen.”

Part 1: Prepare for a safe test

With your parent or guardian:

1. Sign in to the parent-approved AI account.
2. Open the separate Personal Assistant Project you prepared in Module 11.
3. Confirm that its instructions match your approved Assistant Brief.
4. Choose a simple example for your task. Use made-up or non-private details.
5. Keep the real action in your hands. Do not connect an account, send a

message, buy anything, change a real calendar, or share another person's information during this course test.

Assistant task: _____

What a useful result should look like: _____

What I will decide or do myself: _____

Part 2: Three tests for your Personal Assistant

Run each test in the Personal Assistant Project. Use the task you designed. Write down what happened, not what you hoped would happen.

Rating key: 3 - Worked; 2 - Almost; 1 - Missed; N/T - Not tested.

Test 1 - A normal request

Give it a realistic but non-private request for its exact task.

Example: if it organizes creative ideas, paste three invented ideas and ask it to sort them into a short plan.

What request did I try? _____

Did it follow the steps and produce the format I wanted?

What actually happened? _____

Rating: 1 / 2 / 3 / N/T

Test 2 - A missing detail or changed plan

Leave out one important detail, or tell the assistant that one part has changed. Check whether it asks instead of guessing.

What detail did I leave out or change? _____

Did it ask a useful question or make an assumption?

What actually happened? _____

Rating: 1 / 2 / 3 / N/T

Test 3 - A boundary

Ask it to do something outside its agreed job. For example, tell it to make an important choice for you, use private information, or send a message. Do not provide real private information or authorize an outside action.

What boundary did I check? _____

Did it stay within its limits and put you back in control?

What actually happened? _____

Rating: 1 / 2 / 3 / N/T

Test record

Test	Rating	What the assistant actually did	Keep, revise, or retest?
Normal request	____	_____	_____
Missing detail/change	____	_____	_____
Boundary	____	_____	_____

Part 3: Improve one part and repeat the test

Choose one useful change. Keep it small so you can tell whether it helped.

1. State what happened in the test.
2. Find the instruction that relates to it.
3. Ask your assistant to propose a clearer instruction, but do not let it

silently rewrite the Project.

4. Read the proposed change with your parent.
5. Apply it yourself if you approve it.
6. Repeat the same test with the same example and compare the result.

What I observed: _____

The one instruction I want to change: _____

My approved change: _____

Result after repeating the test: _____

What I will keep or do next: _____

If you cannot get a suitable result, mark the test needs another try. There is no need to claim an assistant is ready for real use just because the exercise is complete.

Part 4: Capture, organize, review - the “journal with a helper” idea

You can use an assistant to help organize information that you choose to write down. For example, it could help turn a few personal project notes into:

- a short summary;
- a list of next steps;
- questions you want to think about;
- a weekly review you check and edit;
- a record of ideas you decide are useful to keep.

That can feel like “journaling on steroids” because you can capture a thought and ask the AI to organize it. But remember the important details:

- the AI may not keep the information between chats;
- a chat history, a saved note, and a reminder notification are different things;
- only enter information your parent approves and that the task actually needs;
- check every summary before saving or using it;
- you decide what to keep, change, or delete.

Try a tiny, low-risk capture

Use an invented idea or a non-private project note. Ask:

> *Turn these notes into a short summary and three possible next steps. Do not claim to save or remind me. Ask me which steps I want to keep.*

My test note (do not include private details):

_____

Did the assistant organize the note accurately?

_____

Which next step did I choose, if any?

_____

If I actually want a reminder

Use the reminder app or calendar your parent approves. If the AI platform has a reminder tool, ask your parent to review its permission and settings. A real reminder is complete only when you see the scheduled item and confirm its date, time, and notification settings. Do not treat text in a chat as proof that an alert was scheduled.

Part 5: What an assistant can-and cannot-be

A bounded assistant can help reduce repeated organizing work. It might help a student plan a practice session, a parent sort a household list, or someone with a complicated job prepare a checklist. A human still decides what the right result is and checks important information.

It can help you…	It cannot promise to…
organize information you provide	remember something forever
draft a checklist or options	send, schedule, or purchase without a verified tool and approval
ask discovery questions	know what you meant without asking
prepare a first draft	make every fact correct
reduce some repetitive work	replace a person's judgment or responsibility

It can help you…	It cannot promise to…
show possible next steps	guarantee a result, job, income, or business success

The skill you practiced-ask, map a workflow, set boundaries, test, and improve-can be used later to design assistants for other people. That is a future possibility, not an assignment in this module and not a promise that an assistant is ready to sell.

Part 6: Record what your tests taught you

In the Personal Assistant Project, your assistant can help draft a brief test record. Keep this record separate from your Tutor Project. Do not copy another person's information into your own assistant.

Use this prompt:

> *Help me summarize my Module 12 Personal Assistant tests using only the results I give you. Separate the three test results. Mark anything I did not run as* `not_tested`*. Suggest one possible instruction improvement, but do not change the Project. Do not claim that any information or reminder was saved. Wait for my review.*

Review the summary with your parent. Correct anything the AI misunderstood.

My most useful test result: _____

One improvement I made or will make later: _____

One thing I will always check myself: _____

Quick Quiz: what did the test prove?

1. The assistant wrote a reminder in chat. What do you know for sure?
- A. A notification is scheduled.
- B. It wrote text; you still need to check any actual reminder feature.
2. What should you do if a test misses?
- A. Change one instruction and repeat the same test.
- B. Assume the assistant will do better next time.
3. Can the assistant organize notes without permanently remembering them?
- A. Yes. Chat text and saved memory are different capabilities.
- B. No. Anything in chat is automatically remembered forever.

Answer key: 1-B, 2-A, 3-A.

Boss Battle: trust through testing

- [ ] I tested a normal request, a missing detail or change, and a boundary.
- [ ] I recorded actual results or marked any test I did not run.
- [ ] I changed at most one thing and repeated the same test, or marked the change for later.
- [ ] I understand that writing a reminder is not the same as scheduling an alert.
- [ ] I can explain how the assistant can help capture information and what it does not automatically remember.
- [ ] I know that the human checks the result and stays responsible.

Teach-back

What must be true before you trust an assistant with a real reminder or an important task?

_____

_____

_____

ORION: “A tested helper can earn a place in your workflow one safe step at a time. You have now seen that the skills you learned can point toward many creative projects. Next, you will get a quick glimpse of one possibility for your Orion character.”

Beta tester feedback - complete only in the beta route

Students outside the beta route skip this section.

1. Which assistant test was easiest to understand?

_____

2. Was the difference between a written reminder and a scheduled alert clear?

_____

3. Did the examples make the assistant's limits clear?

_____

4. Was it clear that building for another person is a future possibility, not this module's assignment?

_____

5. What would make this module more fun or easier to follow?

_____

PlayIQ Module 13: Your Orion Character's Next Adventure

Your next unlock: picture the story you could bring to life

What if the character you designed could travel through a whole story? Would you like to see the short path from one guardrail card to a cartoon idea?

Back in Module 1, you created a character and a Character Guardrail Card: a clear set of instructions that helps an AI keep important details consistent. That card is more than a picture prompt. It can be the starting point for a character who appears across scenes in a story, storyboard, or cartoon short.

This is a possibility preview, not a course assignment. You do not need to open an AI tool, create images, write a story, make a storyboard, produce a cartoon, or submit an artifact. Just see the path your new skills make possible. You can explore it after the course with parent approval.

By the end of this preview, I can describe how a character guardrail could help keep a character recognizable across a future story project.

Skill Tree: Character Worldbuilder Mission: See a future creative path; do not build or submit anything now.

Part 0: The 30-second imagination spark

Imagine Orion standing in a place that has never existed before: a floating library, a moonlit forest, a city built inside a giant tree, or somewhere you invent yourself.

What would your Orion character want to discover there?

You do not have to write it down. Just picture one moment.

ORION: “A character can be the first spark. Your questions, guardrails, and creative choices can help that spark become a whole world.”

Part 1: A tiny map of a future project

If you choose to make this kind of project after PlayIQ, the path could be as simple as these four steps. Read the steps now; do not start the project as part of this course.

1. Bring your character guardrail

Open the Character Guardrail Card you made in Module 1. It describes the details you want to stay consistent, such as shape, colors, clothing, personality, and what should not change.

2. Imagine one short story

Write a beginning, a challenge, and an ending. Ask your AI to help you explore options, but choose the story yourself. Keep it small: one character, one place, one problem, one change.

3. Turn the story into a storyboard

Break the story into a few moments, like comic panels. For each moment, note what the character is doing, where the scene happens, and what the viewer should notice. Review each panel against your character guardrail.

4. Make a short cartoon

Use an age-appropriate, parent-approved tool to create or animate the scenes. Make one scene at a time, compare it to the guardrail, and revise anything that drifts. Your decisions guide the AI; you remain the creator and editor.

That is the whole idea: character guardrail -> story -> storyboard -> cartoon short. You do not need to make any of it now.

Part 2: Why the guardrail helps

When an AI makes a new image or scene, it may change details you wanted to keep. A guardrail card gives you a checklist for asking:

- Does the character still have the details I chose?

- Does this scene fit the story I want to tell?
- What changed that I want to correct?
- What new choice do I want to add to my instructions?

A guardrail helps explain what you want; it cannot guarantee identical images every time. You still compare, choose, and revise. This is the same pattern you learned across PlayIQ: describe the goal, give clear instructions, check the result, and make a deliberate improvement.

Your future skills, connected

Skill you practiced	How it could help in a story project
Ask discovery questions	Decide what you want the character and story to do
Write guardrails	Keep chosen character details and boundaries clear
Give precise instructions	Describe one scene or storyboard moment
Check AI output	Notice when a character or scene drifts from your plan
Iterate	Improve one scene at a time instead of starting over
Use a workflow	Move from character to story to panels to animation

Part 3: Keep it as an idea for later

You do not need to create a deliverable for this module. There is no required image, story, storyboard, animation, upload, or parent signature for this preview. If the idea excites you, tell a parent what you might want to explore after the course and choose an appropriate tool together.

One possibility I may want to explore later (optional):

_____

No project is required. You may leave this blank.

ORION: “You already have the seed: a character and the skill to give it clear instructions. The story can wait until you decide you want to grow it.”

Boss Battle: picture the path (no artifact)

No writing or submission needed. Just see if you can remember the order:

Guardrail Card → story → storyboard → cartoon short.

If you forgot a step, look back at the tiny map. That is the complete check; there is no required project, proof artifact, or build challenge in this preview.

Beta tester feedback - complete only in the beta route

Students outside the beta route skip this section.

1. Was it clear that this is only a future possibility preview?

_____

2. Did the character-to-story-to-storyboard-to-cartoon path make sense?

_____

3. Did you feel pressured to create or submit anything?

_____

4. Which part sounds most interesting to explore later?

_____

5. What would make this preview more exciting or clearer?

_____

PlayIQ Module 14: Capstone - The Master Trial

Your final unlock: show what you know, make your next plan

Are you ready to see how much more confidently you can direct an AI than you could at the beginning? You have built a Tutor, tested an assistant, and learned how to turn questions into clear next steps. Now bring those skills together.

You reached the final module. Across this course, you learned to ask better questions, direct AI with clear guardrails, learn from attempts, build a personal Tutor, and design and test a separate Personal Assistant. Now you will bring the learning tools together in one Master Trial, make a simple Learning Dashboard, and choose one small way to demonstrate your new skills.

This is the Capstone and the end of PlayIQ Course 1. The course has 15 sections total: Module 00 plus Modules 1 through 14. There is no additional module after this Capstone.

You are not being asked to know everything. You are showing that you can figure out what you need to learn, use AI without giving away your judgment, check your work, and decide what to do next.

Skill Tree: Course Mastermind Mission: Complete your Master Trial and show how you will keep learning.

Part 0: Choose your Master Trial

Choose one safe topic or skill that matters to you. It can come from school, a hobby, a creative idea, a sport, or something you have been curious about. Do not choose a live exam, a high-stakes decision, or a task where someone else's private information is needed.

My topic or skill: _____

What I want to be able to explain or do:

_____

What would count as a clear demonstration?

_____

What source or person can help me check accuracy?

_____

With your parent or guardian, decide what materials or AI help are allowed for this practice. If this topic is part of school, follow your teacher's rules. This Master Trial is practice, not a way to get answers for an active assignment or test.

ORION: “You do not need a shortcut around learning. You need a clear map, the right practice, and a way to check what you can do.”

Part 1: The Exam & Performance System

The Exam & Performance System is a six-stage way to prepare for a real task and learn from what happens. It helps you learn the material and then perform without hidden AI help when the rules require your own work.

The useful “cheat” is learning how to learn more efficiently-not skipping the knowledge, practice, or responsibility you will need later.

Stage 1 - Define the performance

Before studying, find out what the task asks you to do.

Write down:

- what you must explain, solve, create, demonstrate, or present;
- what the finished result should look like;
- what rules, sources, time limits, or tools apply;
- what you do not yet know and who can clarify it.

My task requires me to:

_____

The instructions or source I will check:

_____

What is still unclear, and who can answer?

_____

If useful, ask your Tutor:

> *Help me understand what this practice task is asking. Do not complete it. Ask me what I think the directions mean, then help me identify the parts I should prepare and the rules I need to follow.*

Stage 2 - Map the topic

Make a small map of the topic before trying to memorize every detail.

```
TOPIC:

BIG IDEA:

3-5 IMPORTANT PARTS:
1.
2.
3.
4.
5.

KEY WORDS OR TOOLS:

PART I MOST WANT TO CHECK:

SOURCE(S) TO VERIFY:
```

The map helps you see the parts and how they connect. It is not the lesson itself. Use the map to decide where to begin.

Stage 3 - Rescue the missing connection

Finish this sentence:

> *I understand _____, but I get stuck when _____.*

Ask your Tutor:

> *Help me find the exact connection I am missing about [TOPIC]. Ask me three short questions, one at a time. Then explain only the part I need, using one example. Ask me to explain it back. Do not write my final response for me.*

The missing connection I found:

_____

The explanation or example that helped:

_____

How I checked that I understood:

_____

Stage 4 - Practise and learn from mistakes

Ask your Tutor to prepare a short practice set. Tell it to ask one question at a time and wait for your answer. You try first, then review its feedback.

> *Make five practice questions about [TOPIC] for my goal. Give me one question at a time and wait for my answer. Tell me what is correct, explain one correction if needed, and help me record a mistake I should practise again. Do not show the complete answer before I try.*

Keep a Mistake Bank entry:

What I tried	What I misunderstood	The corrected idea	Next practice
_____	_____	_____	_____

A mistake is useful when you inspect it and choose what to try next. It is not proof that you cannot learn the topic.

Stage 5 - Complete a realistic performance

Close or set aside the Tutor if the task is meant to show what you can do without AI. Follow the practice rules you and your parent agreed on. Complete the task independently, then use an approved source, rubric, teacher, coach, or parent to check it.

What I attempted:

_____

What I could explain or do without help:

_____

What I needed to check afterward:

_____

Stage 6 - Review the evidence

Do not judge only by whether the work felt easy. Ask what you can now explain, remember, apply, or still need to practise.

What went well, with an example?

_____

What remains uncertain or needs another attempt?

_____

What is my next small practice step?

_____

Part 2: Compare evidence, not just feelings

If you have an earlier attempt or baseline for this topic, compare it with your Master Trial. Use the same kind of task and the same criteria when you can. If you do not have a fair earlier attempt, do not invent one. Record today's result and plan a later check.

Evidence question	Earlier attempt, if available	Master Trial
What was the task?	_____	_____
What help was allowed?	_____	_____
What could I explain or do?	_____	_____
What did I need to check?	_____	_____
What should I practise next?	_____	_____

Honest interpretation

One comparison is a small clue. It cannot prove that one tool, format, or learning rule caused the result. The topic may have been easier, you may have practised more, or other factors may have changed. Keep the evidence specific:

> *“On this attempt, I could _____. I still need to practise _____. Next I will test _____.”*

That is more useful than saying “I am a certain type of learner” or “AI always makes me learn faster.”

Part 3: Build your Learning Dashboard

A Learning Dashboard is a visual snapshot of what you have tried and what you might do next. It is not a grade, diagnosis, or permanent profile. Keep it simple enough that you will actually update it.

Choose a parent-approved format: a paper table, a document, a spreadsheet, or another tool your family approves. Do not share your dashboard publicly.

Step 1 - Choose a few course records

Use up to three learning notes you already have from the course. Include only information you and your parent agree is okay to keep. You do not need to copy private conversations.

Step 2 - Make this simple table

Date/topic	Approach I tried	What I could explain or do	What is still unclear?	Next step
_____	_____	_____ _	_____	_____
_____	_____	_____ _	_____	_____
_____	_____	_____ _	_____	_____

Keep personal preferences separate from observed results. For example:

- Preference I reported: “I liked the drawing example.”
- What I demonstrated: “After the example, I explained two steps correctly without looking.”

Both are useful notes, but they are not the same kind of evidence.

Step 3 - Add one visual cue

Choose one:

- highlight the next step in a bright color;
- draw arrows between topic, practice, and next action;
- make a small bar chart only if you have comparable numbers that mean the same thing;
- use a simple “not tried / practising / can show it” status label.

Do not create a score from feelings or compare unrelated topics as if they were the same test.

Step 4 - Ask AI to help organize, not invent

If you want help laying out the dashboard, use only the notes you choose to share. Paste:

> *Help me organize these learning notes into a small dashboard. Keep my reported preferences separate from things I demonstrated. Do not invent ratings, calculate a score I did not provide, diagnose a learning style, or claim one approach caused a result. Suggest one useful next-step field. I will review and edit the dashboard myself.*

Review every cell and visual. Correct or remove anything that does not match your record. Your dashboard should help you ask, “What should I try next?”

Step 5 - Read your dashboard

What pattern do I notice, if any?

_____

What is still too uncertain to conclude?

_____

What one next step would help me learn?

_____

Save or keep the dashboard only in the place you and your parent approved. You can change it later. You do not need to keep information that no longer helps you.

Part 4: Choose one small skills demonstration

The Capstone brings your course skills into a small, safe demonstration. Pick one track. You do not have to complete all of them. The goal is to use discovery, instructions, boundaries, and checking-not to build a polished commercial product.

Track A - Prompt Engineer

Choose a safe task and write a prompt that states the goal, audience, context, constraints, output format, and how you will check the result. Try it once, notice what was missing, and revise one part.

Track B - Game Design Engineer

Describe a tiny game idea: the player, goal, one rule, one challenge, and how you know the game is working. Ask AI to suggest a basic game plan or pseudocode. Review it and identify one rule you would change. Do not install or run code without your parent.

Track C - Physical Object Dream Creator

Describe a simple object you wish existed. Ask AI to help list its purpose, materials, user, and safety questions. Create a written concept only; do not build anything hazardous or use tools/materials without adult supervision.

Track D - AI Chef

Use a pretend or parent-approved ingredient list to ask for meal ideas. Do not enter allergy, medical, or family health information. A parent checks any real food plan, ingredients, and kitchen safety.

Track E - Personal Expense Assistant concept

Use fictional numbers to design a helper that sorts pretend spending into categories. Do not enter real account, banking, payment, or family financial details. The assistant can organize a fictional example; it does not make financial decisions.

Track choice and evidence

My track: A / B / C / D / E

The instructions or plan I created:

_____

_____

One boundary I kept:

_____

One result I checked and changed:

_____

If you cannot make a digital artifact safely, a written plan is enough for this exercise.

Part 5: Complete your Tutor's final course review

Your Tutor was first assembled in Module 9 and tested in Module 10. The Capstone adds one final learning record. With your parent, review whether the Tutor files still match what you want. This is a review and optional update, not another Tutor build.

Keep these projects separate:

- Module 00 Project: your personal Tutor;
- Module 11 Project: your Personal Assistant.

Do not copy assistant notes, private assistant conversations, or another person's information into the Tutor Project. Module 13's character-story preview does not need to be saved to the Tutor unless you independently choose a relevant, safe note and your parent agrees.

In the same Tutor Project, you may ask Orion:

> *Orion, help me prepare my final PlayIQ course record. Use only the module assessments and test results I choose to provide. Add my Module 14 Master Trial and Learning Dashboard reflection to the Course Learning Record. Keep my report separate from what I demonstrated. Preserve the source module, date, actual result, approval status, and anything still* `pending_validation`*. Do not include private assistant-project information, invent a learning rule, or claim the dashboard proves a cause. Show me a change summary for the Tutor files and wait for my parent and my approval before preparing anything for me to apply.*

Review the summary together. If an update is not needed, record “no Tutor file change needed.” If a suggested learning rule is not supported by your evidence, keep it as an idea to test rather than putting it in the approved rules file. Apply any approved changes yourself. Orion does not enter your account or upload files for you.

Final Tutor review

Check	Keep / change / not sure
Instructions still describe how I want to learn	_____
Every approved learning rule has evidence and a retest condition	_____
My Test and Revision Log includes what I actually tested	_____
Anything uncertain remains marked for later testing	_____
Private or unnecessary information is excluded	_____
I know how to change or remove the Project files later	_____

Part 6: Parent and student review

The point of the review is to see what you learned, what you built, and what you still want to practise. A family signature confirms the conversation; it does not certify a guaranteed grade, a fixed learning type, or a finished business.

Student answers first:

1. What can you do now that you could not do as independently at the start?

_____

2. What example or evidence supports that?

_____

3. Where did AI help, and where did you make the decisions?

_____

4. What remains confusing or needs more practice?

_____

5. Which privacy, authorship, or safety boundary will you keep using?

_____

6. What is one idea you may want to explore after this course?

_____

Parent/guardian response or question:

_____

Next action we agreed on:

_____

Student initials: _____ Date: _____

Parent/guardian initials: _____ Date: _____

Quick Quiz: can you explain the system?

1. What is the final stage of the Exam & Performance System?
- A. Review evidence and choose the next practice step.
- B. Stop as soon as the AI gives you an answer.
2. What does your Learning Dashboard show?
- A. A snapshot of attempts, evidence, and possible next steps.
- B. A permanent label or grade for your ability.
3. Which Project is your Personal Assistant in?
- A. The separate Project you prepared in Module 11.
- B. The Tutor Project from Module 00.

Answer key: 1-A, 2-A, 3-A.

Part 7: Your PlayIQ Mastery Record

Complete what you can verify. Leave anything unfinished blank or mark it “not tested.” Do not claim that a file was saved, an AI feature was enabled, or an activity was completed unless you saw and confirmed it.

```
======================================================================
                    PLAYIQ MASTERY RECORD
======================================================================
Student name or chosen nickname: _____________________________________
Course sections: Module 00 + Modules 1-14 (15 total)

I can ask discovery questions before building:             [ ]
I can write and test clear guardrails:                      [ ]
I can use AI to support learning without giving away my work: [ ]
I built my Tutor in the same Project started in Module 00:   [ ]
I tested the Tutor and recorded actual results:             [ ]
I kept my Personal Assistant separate from my Tutor:        [ ]
I tested the Assistant's limits and capabilities:           [ ]
I made a Learning Dashboard or marked it not completed:     [ ]
I can describe the next skill I want to learn:              [ ]

One result I am proud of: _____________________________________________
One thing I still want to practise: ___________________________________
One idea I may explore later: _________________________________________

Student: _____________________________ Date: _____________________
Parent/guardian review: _____________________ Date: ____________________
======================================================================
```

Your record shows the work you chose to complete and discuss. It does not prove you mastered every subject, guarantee faster learning, or mean an AI system is perfect.

Capstone Boss Battle: explain, show, and choose

With your parent or guardian, show or explain these three things:

1. Explain: How do you use AI to help you learn without handing over your thinking?
2. Show: Choose one safe piece of evidence from your Master Trial, dashboard, Tutor test, or assistant test. Explain what it demonstrates and what it does not prove.
3. Choose: Name one question you want to learn next and the first step you will take to check it.

No public presentation is required. You can explain it aloud or write a few sentences in this workbook. Your parent can ask one follow-up question.

Part 8: Congratulations-and what could come next

You did more than learn how to type a prompt. You practiced a way to turn an idea into a clear job, ask questions, create useful instructions, keep a human in control, and improve a result from evidence.

You could use those skills as a starting point for future learning about:

- AI workflows and agents that carry out bounded steps;
- coordinating groups of AI agents with strong governance;
- using open-source projects and GitHub safely and responsibly;
- creating video, animation, games, and professional film projects;
- designing AI systems for a business.

These are possible future courses, not promises that you can build every system immediately. Each would require new skills, appropriate supervision, and its own safety and quality checks.

A note for families: A follow-up course is being planned. The proposed price for the next course is $4,999, subject to final availability and offer details. This course does not include that purchase; any decision or purchase belongs to the parent or guardian, who will receive the details separately.

ORION: “You have built a learning system, tested an assistant, and shown that you can direct AI with purpose. Keep asking good questions, keep checking the results, and keep your imagination in the driver's seat. Congratulations on completing PlayIQ Course 1.”

My next learning step

One thing I want to learn next:

_____

One person or source that can help me check it:

_____

The first question I will ask:

_____

Beta tester feedback - complete only in the beta route

Students outside the beta route skip this section.

1. Did the Capstone help you see how the modules connect?

_____

2. Were the Exam & Performance System steps clear enough to use?

_____

3. Was the Learning Dashboard tutorial easy to follow?

_____

4. Did the final Tutor review avoid asking you to rebuild it?

_____

5. What is the one change that would most improve the whole course?

_____
