

PLAYIQ ACADEMY

ORION PORTFOLIO PACKAGE SETUP GUIDE

Implementation guide for creating school partnerships decks & one-pagers.

PREPARED FOR: Jer-ric Martinez

DATE: June 22, 2026

VERSION: 1.0.0

GUIDE: ORION & PLAYIQ PORTFOLIO PACKAGE SETUP

For: Jer-ric Martinez

Purpose: Creating a high-impact portfolio deck, one-pager, or leave-behind packet for Sihara to share during school principal meetings and offsite lunches.

TABLE OF CONTENTS

1. Overview & Objective
 2. Structure of the "Package"
 3. Slide-by-Slide & Section Content Guide
 4. Design & Visual Requirements
 5. Step-by-Step Setup Actions for Jer-ric
-

OVERVIEW & OBJECTIVE

This guide outlines how to build a polished, professional portfolio package for **PlayIQ** and its custom guided AI, **Orion**. Sihara will use this material in informal meetings and offsite lunches with school administrators and educators to:

- **Demonstrate Value:** Explain how PlayIQ and Orion teach students how to work *with* AI, rather than using it as a cheating shortcut.
 - **Establish Trust & Credibility:** Highlight the safety, course alignment, and pedagogical guardrails that make Orion safe for school deployment.
 - **Propose a Free Pilot:** Offer a low-friction opportunity for schools to validate the platform at no charge.
-

STRUCTURE OF THE "PACKAGE"

We recommend preparing **two complementary deliverables** so Sihara can adapt to the meeting dynamic:

DELIVERABLE A: THE MINI PITCH DECK (PDF PRESENTATION)

- **Format:** Landscape PDF, 5–7 slides.
- **Use Case:** Showing the product on an iPad/laptop during lunch or emailing it as a follow-up.
- **Tone:** Strategic, visual, benefit-driven.

DELIVERABLE B: THE QUICK-READ ONE-PAGER (PRINTABLE LEAVE-BEHIND)

- **Format:** Portrait PDF, 1 page (front & back if necessary).
- **Use Case:** Physical handout left with the principal at the end of the meeting.
- **Tone:** Highly summarized, structured, easily scannable.

SLIDE-BY-SLIDE & SECTION CONTENT GUIDE

SLIDE 1: COVER & VISION

- **Heading:** PlayIQ + Orion: Guided AI Tutors for Modern Learning
- **Sub-heading:** Empowering students to build AI literacy, think critically, and master course concepts safely.
- **Visual:** PlayIQ Logo, Orion branding, or a high-quality mockup showing a student interacting with the platform.

SLIDE 2: THE CORE PROBLEM IN EDUCATION

- **Heading:** The AI Dilemma in Classrooms
- **Content:**
 - *The Shortcut Problem:* Students copy-paste prompts into ChatGPT, receiving answers without understanding the underlying concepts.
 - *The Safety & Privacy Gap:* Public AI platforms lack curriculum context, content safety boundaries, and teacher visibility.
 - *The Instructor's Burden:* Teachers cannot track how students interact with AI, making it hard to evaluate authentic learning.

SLIDE 3: THE SOLUTION — PLAYIQ & ORION

- **Heading:** Meet Orion: The Purpose-Built AI Learning Coach
- **Content:**
 - *Course-Aware & Aligned:* Orion is natively integrated into the PlayIQ modules. It knows exactly what lesson the student is on and guides them step-by-step.
 - *Socratic Hint Ladder:* Orion doesn't give away answers. Instead, it provides incremental guidance, helping students get unstuck while prompting them to explain concepts back.

- *Pedagogical Safety Guardrails:* Strict content governance prevents out-of-bounds queries, keeping the learning experience focused on the curriculum.

SLIDE 4: ORION VS. GENERIC CHATBOTS (CHATGPT)

- **Heading:** Why Orion Belongs in the Classroom (Compared to ChatGPT)
- **Content Table/Layout:**

FEATURE	CHATGPT	ORION (PLAYIQ)
Primary Mode	Direct Answer Generation	Socratic Tutoring & Active Guidance
Curriculum Context	None (Generic Web Search)	Fully aware of PlayIQ Modules 1–11
Student Progression	Answer-and-Forget	Adapts dynamically to child's pace
Privacy & Safety	Public Data Opt-In	Strict school/parent privacy bounds
Cheat Protection	None (Writes essays/answers)	Prompts for "Teach Backs" to verify

SLIDE 5: STUDENT & PARENT VALUE PROPOSITION

- **Heading:** Empowering the Whole Learning Circle
- **Content:**
- **For Students:** A personalized 1-on-1 tutor that adapts to how they learn, making complex computer science and AI concepts intuitive.
- **For Parents:** Peace of mind. Safe learning filters, coupled with an interactive dashboard that shares progress summaries without exposing private messages or records.
- **For Schools:** Turnkey integration that elevates AI education while protecting academic integrity.

SLIDE 6: PILOT OFFER & VALIDATION

- **Heading:** Partner with PlayIQ: Beta Access & Educator Validation
- **Content:**
- **The Offer:** Bring PlayIQ and Orion to your school for a trial run at **no charge**.
- **The Purpose:** Gather feedback from your educators to refine our next-gen launch.
- **Implementation:** Lightweight setup, zero friction, and full support from our engineering team.
- **Call to Action:** "Let’s start with a small group of students this term."

 DESIGN & VISUAL REQUIREMENTS

To ensure the deliverables feel premium and premium-grade, Jer-ric should apply the following guidelines:

1. Mockups & Product Screenshots:

- Do not use generic stock photos. Take actual high-resolution screenshots of the student dashboard, the course roadmap, and the Orion floating tutor interface.
- Place these screenshots inside clean browser or tablet device mockups.

2. Harmonious Color Palette:

- Use a modern, sophisticated color scheme that aligns with the PlayIQ brand.
- Use a clean dark-mode base with vibrant accents (e.g., violet, indigo, or emerald HSL tailored tones) to evoke a forward-looking, high-tech learning environment.

3. Clean Typography:

- Use premium Google Fonts (like *Inter*, *Outfit*, or *Plus Jakarta Sans*) to keep copy highly readable.
- Ensure large, bold headings and generous line spacing.

4. Micro-Infographics:

- Use simple, custom-designed charts or vector pathways to show the "Student -> Orion -> Knowledge Base -> Progression" flow rather than paragraphs of text.

**STEP-BY-STEP SETUP ACTIONS FOR JER-RIC****Step 1: Capture Product Assets**

- Log into the student test environment and take clear screenshots of:
- The main curriculum roadmap (showing progress tracking).
- The chat interface with Orion (demonstrating a Socratic hint sequence).
- The parent progress summary dashboard.

**Step 2: Set Up the Design Template**

- Create a presentation file (Figma, Canva, or Pitch) using a 16:9 canvas.
- Import PlayIQ's branding assets, colors, and typography rules.

**Step 3: Draft and Format the Copy**

- Use the [Slide-by-Slide & Section Content Guide](#) to populate the slides.
- Refine the bullet points to be punchy and focused on educator outcomes.

**Step 4: Design the Orion vs. ChatGPT Comparison Graphic**

- Build a clean, high-impact comparative matrix layout (similar to Slide 4) using custom icons instead of plain text tables.

**Step 5: Export and Optimize**

- Save the presentation as a high-quality PDF.
- Create a condensed, double-sided portrait PDF version to serve as the physical one-pager leave-behind.

☐ **Step 6: Deliver to Sihara**

- Provide Sihara with both the presentation link (for digital sharing) and print-ready PDFs.
